Battery Pack UN38.3 Test Report

Customer:Lenovo Model: L18C4PH0 Rating:7.68V/58Wh IssueDate:June.24.2019

1.Standard

UN38.3S-T/SG/AC.10/11/Rev.6/Amend.1

2.Sample Description

Model Name	L18C4PH0	Pack Configuration	2S2P
Sample type	Pack 16pcs/Cell 30pcs	Use	NB
Cell Factory/Model	Coslight CA4344C8G 3910mAh	Battery weight	238.96g
Factory Address	Hi-Tech Industrial Park, 1111 Hanpu Rd, Kun Shan, Jiangsu 215316, China	Laboratory Address:	Hi-Tech Industrial Park, 1111 Hanpu Rd, Kun Shan, Jiangsu 215316, China
Factory Name:	Celxpert (kunshan) Enengy.,Ltd	Laboratory Name:	品保部實驗室
Factory TEL	+86-512-57775999	Laboratory Tel:	+86-512-57775999

6.Test method and verdict

Clause	Req	uirements			Result	Verdict
	Mass bss means a	loss of mass that ex	ceeds the values in	table 38.3.1	below	
		Table 38.3.1:M	ass loss limit			
Table		Mass M of cell or battery	Mass loss limit			
38.3.1		M<1g	0.5%			
		1g≦M≦75g	0.2%			
		M>75g	0.1%			
		T1 :Altitude	simulation			
	This test simulates air transport under	low-pressure cond	itions		No leakage	
38.3.4.1	Test cells and batteries shall be stored hour at ambient temperature ($20\pm5^{\circ}$ C)	at a pressure of 11	.6kPa or less for at l	east six	no venting no disassemble no rupture	
	Cells and batteries meet this requirem disassemble, no rupture and no fire and if after testing is not less than 90% of its volt requirement relating to voltage is not appl states	the open circuit vo age immediately p	ltage of each test ce rior to this procedu	ll or battery re. The	no fire. voltage not less than 90% Mass loss limit (see table 38.3.1)	Р
		T2:Ther	mal test			
	This test assesses cell and battery seal test is conducted using rapid and extre	tions. The				
38.3.4.2	Test cells and batteries are to be stored to 72±2°C, followed by storage for at least °C. The maximum time interval between t procedure is to be repeated until 10 total o batteries are to be stored for 24 hours at a	o – 40±2 s. This cells and arge cells	No leakage no venting no disassemble no rupture no fire	Р		
	and batteries the duration of exposure to thours. Cells and batteries meet this requirem disassemble, no rupture and no fire and if after testing is not less than 90% of its volt requirement relating to voltage is not applistates.	o ll or battery re. The	voltage not less than 90% Mass loss limit (see table 38.3.1).			
	This test simulates vibration during tra	ansport				
	Cells and batteries are firmly secured t distorting the cells in such a manner as to shall be a sinusoidal waveform with a loga to 7 Hz traversed in 15 minutes. This cycle for each of three mutually perpendicular n of vibration must be perpendicular to the For cells and small batteries: from 7 Hz Hz is reached. The amplitude is then main	No leakage no venting no disassemble				
38.3.4.3	frequency increased until a peak accelerat accelerat acceleration of 8gn is then maintained unt	z). A peak	no disassemble no rupture no fire. voltage not less	Р		
	For large batteries: from 7 Hz to a peal reached. The amplitude is then maintained frequency increased until a peak accelerat acceleration of 2gn is then maintained unt Cells and batteries meet this requirem	nd the z). A peak	than 90% Mass loss limit (see table 38.3.1)			
	cells and batteries meet this requirem disassemble, no rupture and no fire during voltage of each test cell or battery directly position is not less than 90% of its voltage requirement relating to voltage is not appl states.	g the test and after after testing in its t immediately prior	the test and if the o hird perpendicular to this procedure. T	pen circuit mounting he		

Clause	Requirements	Result	Verdict
	T4:Shock		
	This test assesses the robustness of cells and batteries against cumulative shocks		
38.3.4.4	Test cells and batteries shall be secured to the testing machine by means of a rigid mount which will support all mounting surfaces of each test battery	No leakage no venting no disassemble no rupture no fire. voltage not less than 90% Mass loss limit (see table 38.3.1)	
	Each cell shall be subjected to a half-sine shock of peak acceleration of 150gn and pulse duration of 6 milliseconds. Alternatively, large cells may be subjected to a half-sine shock of peak acceleration of 50gn and pulse duration of 11 milliseconds.		
	Each battery shall be subjected to a half-sine shock of peak acceleration depending on the mass of the battery. The pulse duration shall be 6 milliseconds for small batteries and 11 milliseconds for large batteries. The formulas below are provided to calculate the appropriate minimum peak accelerations.		Р
	Each cell or battery is subjected to three shocks in the positive direction followed by three shocks in the negative direction of each of three mutually perpendicular mounting positions of the cell for a total of 18 shocks.		
	Cells and batteries meet this requirement if there is no kakage, no venting, no disassemble, no rupture and no fire and if the open circuit voltage of each test cell or battery after testing is not less than 90% of its voltage immediately prior to this procedure. The requirement relating to voltage is not applicable to test cells and batteries at fully discharged states.		
	T5:External short circuit		
	This test simulates an external short circuit		
29.245	The cell or battery to be tested shall be shall be heated for a period of time necessary to reach a homogeneous stabilized temperature of $57\pm4^{\circ}$ C, measured on the external case. This period of time depends on the size and design of the cell or battery and should be assessed and documented. If this assessment is not feasible, the exposure time shall be at least 6 hours for small cells and small batteries, and 12 hours for large cells and large batteries. Then the cell or battery at $57\pm4^{\circ}$ C shall be subjected to one short circuit	no disassemble no rupture no fire. Packs exterior	
38.3.4.5	condition with a total external resistance of less than 0.1 ohm. This short circuit condition is continued for at least one hour after the cell or battery external case temperature has returned to 57 ± 4 °C, or in the case of the large batteries, has decreased by half of the maximum temperature increase observed during the test and remains below that value.	Packs exterior peak temperature <170℃ Mass loss limit (see table 38.3.1)	Р
	The short circuit and cooling down phases shall be conducted at least at ambient temperature.		
	Cells and batteries meet this requirement if their external temperature does not exceed 170° C and there is no disassemble, no rupture and no fire within six hours of this test.		

Clause	Requirements	Result	Verdict
	T6:Impact/Crush		
	These tests simulate mechanical abuse from an impact or crush that may result in an internal short circuit.		
38.3.4.6	These tests simulate mechanical abuse from an impact or crush that may result in an internal short circuit. Impact applicable to cylindrical cells not less than 18.00 in diameter. The test sample cell or component cell is to be placed on a flat smooth surface. A 15.8mm±0.1mm diameter, at least 6cm long, or the longest dimension of the cell, whichever is greater, Type 316 stainless steel bar is to be placed across the centre of the sample. A 9.1 kg ± 0.1kg mass is to be dropped from a height of 61 ± 2.5 cm at the intersection of the bar and sample in a controlled manner using a near frictionless, vertical sliding track or channel with minimal drag on the falling mass. The vertical track or channel used to guide the falling mass shall be oriented 90 degrees from the horizontal supporting surface. The test samples is to be impacted with its longitudinal axis parallel to the flat surface and perpendicular to the longitudinal axis of the 15.8mm±0.1mm diameter curved surface lying across the centre of the test samples. Each sample is to be subjected to only a single impact. Crush applicable to prismatic, pouch, coin/button cells and cylindrical cells less than 18mm in diameter. A cell or component cell is to be crushed between two flat surfaces. The crushing is to be gradual with a speed of approximately 1.5cm/s at the first point of contact. The crushing is to be gradual with a speed of approximately 1.5cm/s at the first point of contact. The crushing is to be gradual with a speed of approximately 0.78kN; Example : The force shall be applied by a hydraulic ram with a 32 mm diameter piston until a pressure of 17 MPa is reached on the hydraulic ram (b) The voltage of the cell drops by at least 100mV; or (c) The cell is deformed by 50% or more of its original thickness.	no disassemble no rupture no fire. not exceed 170°C Mass loss limit (see table 38.3.1)	Р
	Once the maximum pressure has been obtained, the voltage drops by 100mV or more, or the cell is deformed by at least 50% of its original thickness, the pressure shall be released A prismatic or pouch cell shall be crushed by applying the force to the widest side. A		
	button/coin cell shall be crushed by applying the force on its flat surfaces. For cylindrical cells, the crush force shall be applied perpendicular to the longitudinal axis.		
	Each test cell or component cell is to be subjected to one crush only. The test Samples shall be observed for a further 6 h. The test shall be conducted using test cells or component cells that have not previously been subjected to other tests. Cells and component cells meet this requirement if their external temperature does not		
	exceed 170 $^\circ C$ $$ and there is no disassemble and no fire during the test and within six hours after this test.		

Clause	Requirements	Result	Verdict						
	T7:Ovecharge								
38.3.4.7	This test evaluates the ability of a rechargeable battery or a single cell rechargeable battery to withstand an overcharge condition								
	The charge current shall be twice the manufacturer's recommended maximum continuous charge current. The minimum voltage of the test shall be as follows:								
	(a) When the manufacturer's recommended charge voltage is not more than 18V, the minimum voltage of the test shall be the lesser of two times the maximum charge voltage of the battery or 22V.	No disassemble no fire. Mass loss limit (see table 38.3.1)	Р						
	(b) When the manufacturer's recommended charge voltage is more than 18V, the minimum voltage of the test shall be 1.2 times the maximum charge voltage.								
	Tests are to be conducted at ambient temperature; the duration of the test shall be 24 hours								
	Rechargeable batteries meet this requirement if there is no disassemble and no fire during the test and within seven days after the test.								
	T8:Forced discharge								
	This test evaluates the ability of a primary or a rechargeable cell to withstand a forced discharge condition								
38.3.4.8	Each cell shall be forced discharged at ambient temperature by connecting it in series with a 12V D.C. power supply at an initial current equal to the maximum discharge current specified by the manufacturer.	no disassembly no fire							
	The specified discharge current is to be obtained by connecting a resistive load of the appropriate size and rating in series with the test cell Each cell shall be forced discharged for a time interval (in hours) equal to its rated capacity divided by the initial test current (in ampere).	Mass loss limit (see table 38.3.1)	Р						
	Primary or rechargeable cells meet this requirement if there is no disassembly and no fire during the test and within seven days after the test.
