Approved by: Robert J Taylor Date: 06/28/2020

Title: Director, Corporate Responsibility Engineering

**Revision History** 

Revision F		
Date	EC Level	Change Summary
2008-11-19	M07196M	Modified document Title.
		Table 1
		Changed references to PCD to SMD (Supplier Material Declaration)
		Asbestos - description changed to be consistent with IPC-1752
		Brominated Flame Retardants - add "Intentionally Added" and remove all other
		comments.
		Mercury/Mercury Compounds - change the description to "Not present except in lambs"; consistent with Table 3.
		Hexavalent Chromium/Hexavalent Chromium - changed the description to be
		consistent with description in 41A7733; consistent with Table 3.
		Polyvinyl chloride (PVC) – removed threshold limit; changed description to reflect
		no usage in external plastic covers; consistent with Table 3.
		Polycyclic Aromatic Hydrocarbons (PAH) – moved requirements from Table 3
		Red Phosphorous (Red-P) flame retardants – changed description
		Table 2
		"Low Halogen" Substance Requirements – changed description Table 3
		Antimony/Antimony Compounds – added phase-out target
		Beryllium/Beryllium Compounds – added phase-out target
		Brominated / Chlorinated Flame Retardants (other than PBBs or PBDEs) – changed
		description to be consistent with Table 3.
		Change the Copyright Lenovo Corp. 2006 to Copyright Lenovo Corp. 2008
		EC release dates added under the EC numbers.
		2.4.2.4 Additional Requirements for Taiwan – revised to reflect recent updates
		Figure 4. Four-in-One recycling symbol for Taiwan – updated symbol
		2.4.2 Product Design and Labeling Requirements for Batteries - "EU" notation added
		to EU Battery Directive Mark per EPBA recomendation.
2009-02-10	M07339F	Added REACH requirements and information.
		Updated reference documents.
		Updated BFR/PVC phaseout plans (beginning 2011); criteria and requirements.
		Updated rechargeable battery labelling requirements for Japan.
		Added Product Energy requirements for monitors, external power adapters, PC's
2012 00 26	<b>V</b>	(China, Korea, EU, Switzerland, Australia, New Zealand).  Updated China WEEE and National Standards reference documents
2012-09-26	Version 6.0	Updated Restricted Substances listings
		Added Additional Requirements for Children's Products
		Updated REACH/SVHC information
		Updated Battery restrictions for non-removable and button cell batteries
		Update Battery labeling requirements
		Update WEEE marking label (remove EU Only)
		Update China WEEE information and requirements
		Updated China Product Energy requirements
		Updated EuP/ErP product energy efficiency requirements
		Updated External Power Supply (EPS) for Australia, New Zealand, US/DOE,
		Canada, China.
		Added California Battery Charger requirements
		Added Annex DD SVHC Candidate List (June 2012)
2012-10-10	Version 6.1	Added Annex EE. Hydrofluorocarbons (HFCs)
		Correctd Desktop/AIO, Notebook Frame Buffer Width criteria in Table 12.

2013-09-26	Version 6.2	Table 1 Updates: Short Chain Chlorinated Paraffins reference to PoPs convention added. Perfluorooctane sulfonates(PFOS) reference to PoPs convention added. Lead carbonates and Lead sulphates reference to REACH annex XVII added. Monomethyl — tetrachlorodiphenyl methane reference to REACH annex XVII added. Monomethyl-dichloro-diphenyl methane reference to REACH annex XVII added. Monomethyl-dibromo-diphenyl methane reference to REACH annex XVII added. Monomethyl-dibromo-diphenyl methane reference to REACH annex XVII added. 2-(2-butoxyethoxy)ethanol(CAS No.: 112-34-5) prohibited no more than 3% by weight by REACH annex XVII added. Dibutyltin (DBT) reference to REACH annex XVII added. Dibutyltin (DBT) reference to REACH annex XVII added. TBT and TPT reference to REACH annex XVII added. CAS number for Dimethyl fumarate corrected. Polychlorinated biphenyls(PCBs) Annex reference corrected. JIG 101 Level A definition/references updated to edition 4.1, EU Regulation (EC) No 1907/2006 and Annex XVII replaces Directive 76/769/EEC, Marketing and Use of Dangerous Substances. Updated Table 1 references. Corrected Annex references to Polybrominated biphenyls, Polychlorinated biphenyls. Updated requirements for Halogenated diphenyl methanes (refer to Annex D). RoHS definition/references updated to 2011/65/EU. WEEE definition/references updated to 2012/19/EU. Updated and included other jurisdictions with RoHS requirements. Updated ReACH SVHC listing per 20 June 2013 Candidate List. Added Annex EE. List of substances subject to REACH Authorisation (current as of the date of this specification. Hydrofluorocarbons (HFCs) listing moved to Annex FF. Added requirements for Austrailia and New Zealand MEPS. Updated EPEAT logo images, specifications, and guidelines. Added definition of EEE (Section 1.2) Table 1 Updates: Acids generated from chromium trioxide and their oligomers, Ammonium dichromate, Biocidal product, chromium trioxide, Hexavalent
		Table 3 Updates: Regulatory or other references changed to Examples of Industry Uses / Comments 1, 2, 3-Trichlorobenzene, 1, 2, 4-Trichlorobenzene, 2,3-Dibromo-1-propanol, 2,4-Dinitrotoluene, 2-Butanone oxime, 2-Ethylhexyl-2,3,4,5-tetrabromobenzoate (TBB), 4, 4'-Diaminodiphenylmethane (MDA), Arsenic pentaoxide, Arsenic trioxide, Beryllium (CAS 7440-41-7), Beryllium oxide (CAS 1304-56-9), Bis(2-ethylhexyl)tetrabromophthalate (TBPH or BEHTBP), Bisphenol A, Cobalt dichloride, Cobalt metal, Cobalt sulfate, Dibromoneopentyl-glycol, Dibromoneopentyl-glycol, Diethyl phthalate, Diisononyl phthalate (DINP), Di-n-hexyl phthalate (DNPP), Di-n-octyl phthalate (DNOP), Di-n-pentyl phthalate (DNPP), Dioctyltin (DOT) compounds, Formaldehyde, Hydrazine, Indium phosphide, Indium phosphide, Long chain chlorinated paraffins (LCCP),

		Nanomaterials, n-Butyl glycidyl ether, n-Hexane, Nickel sulfamate, Nickel sulphate, Nonylphenols, P-Dichlorobenzene, Perchlorates (Annex MM), Perfluoroalkyl sulfonates (PFASs), Perfluorooctanoic acid (PFOA) and its salts, Polycyclic aromatic hydrocarbons (PAHs), Refractory ceramic fibres, Tetrabromobisphenol A, Tetrabutyltin (TTBT) (CAS 1461-25-2), Toluene (CAS 108-88-3), Tributyltin (TBT) and tributyltin compounds, Triphenyltin (TPT) and triphenyltin compounds, Tris (1,3-dichloro-2-propyl) phosphate (TDCPP), Tris (2, 3-dibromopropyl) phosphate, Tris (2-chloro-1-methylethyl) phosphate (TCPP), Tris (2-chloroethyl) phosphate (TCEP), Vinyl chloride Removed the weight plastic weight exemption for Brominated / Chlorinated Flame Retardants (other than PBBs or PBDEs).
		Table 5 Updates: Sum of PAHs changed to 18. Ammonium pentadecafluorooctanoate (APFO), Benzyl butyl phthalate (BBP), 1,2-Benzenedicarboxylic acid, dipentylester, branched and linear, 1,2-Benzenedicarboxylic acid, dihexyl ester, branched and linear, Bis (2-ethyl(hexyl)phthalate) (DEHP), Cadmium, Cadmium chloride, Cadmium oxide, Cadmium sulphide, Diboron trioxide, Diisopentylphthalate, Di-n-hexyl phthalate (DNHP), 1,2-dimethoxyethane;ethylene glycol dimethyl ether (EGDME), Dipentyl phthalate (DPP), Fatty acids, C16-18, lead salts, Hexabromocyclododecane (HBCDD), Lead monoxide (lead oxide) trioxide, Lead oxide sulphate, Lead titanium trioxide, Orange lead (lead tetroxide), Pentadecafluorooctanoic acid (PFOA), [Phthalate (2-)]dioxotrilead Pyrochlore, antimony lead yellow, Sodium perborate; perboric acid, sodium salt, Sodium peroxometaborate, Tetralead trioxide sulphate
		Updated Annex C Halogenated aromatic substances Updated Annex BB Tributyl Tin, Triphenyl Tin Updated Annex CC Polycyclic Aromatic Hydrocarbons Updated Annex DD SVHC Candidate List Updated Annex EE List of substances subject to REACH Authorisation Added Annex GG Nonylphenols Added Annex HH Perchlorates  Added Section 2.4.2.6: Requirements for Alkaline Batteries Sold in Latin America Updated Section 2.11.1.4 Energy requirements for Flat Panel TVs in China and
		Section 2.11.4.4 Energy requirement for External Power Supplies in China  Updated Section 2.11.4.6 Requirements for California to include the BC mark labeling requirements.
		Added Section 2.11.6 Requirements for Mexico: Computers, Small Scale Servers, Servers, Storage Products, and peripheral
2014-09-05	Version 6.4	Table 1 Update: Red Phosphorous (Red-P) flame retardants restricted from use in all electrical/electronic parts, assemblies, etc.
2015-03-05	Version 6.5	Table 1 Update: 600ppm allowance for PBBs, PBDEs, excluding DecaBDE in PCC recyclate and plastic resins.  Table 4 Update: Added New SVHC substances. Cadmium fluoride, Cadmium sulphate, 2-benzotriazol-2-yl-4,6-di-tert-butylphenol (UV-320), 2-(2H-benzotriazol-2-yl)-4,6-ditertpentylphenol (UV-328), 2-ethylhexyl 10-ethyl-

	I	T. ( ) ( ) ( ) ( ) ( ) ( ) ( ) ( ) ( ) (
		4,4-dioctyl-7-oxo-8-oxa-3,5-dithia-4-stannatetradecanoate (DOTE), reaction mass
		of 2-ethylhexyl-10-ethyl-4,4-dioctyl-7-oxo-8-oxa-3,5-dithia-4- stannatetradecanoate
		and 2-ethylhexyl 10-ethyl-4-[[2-[(2-ethylhexyl)oxy]-2- oxoethyl]thio]-4-octyl-7-
		oxo-8-oxa-3,5-dithia-4-stannatetradecanoate (reaction mass of DOTE and MOTE)
		General: format, punctuation, grammatical updates/corrections.
2015-07-02	Version 6.6	Added 4 phthalates per new Directive (EU) 2015/863 to amend Annex II to EU
		RoHS 2 (Directive 2011/65/EU).
		Updated REACH SVHC listing per 15 June 2015 Candidate List: UV-320,
		UV328, Cadmium fluoride, Cadmium sulphate, DOTE, Reaction mass of DOTE
		and MOTE, 1,2-benzenedicarboxylic acid, di-C6-10-alkyl esters; 1,2-
		benzenedicarboxylic acid, mixed decyl and hexyl and octyl diesters with > 0.3% of
		dihexyl phthalate
		Table 1 Updates: Azocolourants entry updated, Nonylphenol ethoxylates,
		Perfluorooctanoic acid PFOAs (REACH restrictions)
		Table 4 Updates: Toluene diisocyanates, Perfluoro carboxylic acid and related
		compounds (reporting requirements)
		Table 7 Updates: New law –Canada Products Containing Mercury Regulations
		SOR/2014-254 (all battery types)
		Section 2.6 New law –Canada Products Containing Mercury Regulations
		SOR/2014-254 (product and packaging label requirements)
		Table 10 updates: Product and packaging labeling requirements for Canada, US
		Web page notification requirements for notebook, laptop computers
		2.11.4 EPS energy efficiency requirements and standards updated (DOE Energy
		Conservation Program: Energy Conservation Standards for External Power
		Supplies)
		Added: Annex II. Perfluorooctyl acid (PFOA) and salts
		Added: Annex JJ. Perfluorinated compounds
		Added: Annex KK. Toluene Diisocyanates
		Added: Annex LL. Nonylphenol Ethoxylates
		Updated: Annex DD. SVHC Candidate List
		Updated: Annex EE. REACH Authorization List of substances
2016-03-25	Version 6.7	Update to Article definition
2010 03 23	V CI SIOII O.7	Table 1 Updates: Changed restriction for 22 Authorized SVHCs from term
		"Deliverable" to "Article"
		Updated GS Mark standard and requirements for Polycyclic Aromatic
		Hydrocarbons (PAH)
		Table 4: Updates: The term "Deliverable" has been replaced with "Article" and a
		note added referring to the September 10, 2015 ruling from the EU Court of Justice.
		Added -Nanomaterial (new law -Belgium Royal Decree)
		Additional requirement "Prohibited in Substances and Preparations" added for
		Cadmium, Hexachloroethane, Nonylphenol ethoxylates, Tris-(aziridinyl)–
		phosphineoxide, Tris (2,3 dibromopropyl)
		Updated REACH SVHC listing per 17 December 2015 Candidate List.:
		2-(2H-benzotriazol-2-yl)-4-(tert-butyl)-6-(sec-butyl)phenol (UV-350)
		Dicyclohexyl phthalate
		2,4-di-tert-butyl-6-(5-chloro benzotriazol -2-yl) phenol (UV-327)
		Hexamethylene diacrylate
		Perfluorononan-1-oic acid (2,2,3,3,4,4,5,5,6,6,7,7,8,8,9,9,9-
		heptadecafluorononanoic acid and its sodium and ammonium salts
		1,3-propanesultone
		Table 7 Updates: Zinc silver oxide, zinc air and zinc manganese dioxide button
		batteries prohibited (Japan Act on Preventing Environmental Pollution of Mercury)

		Added – Battery requirements for Brazil
		Added SystemX energy efficiency requirements; i.e., Switches, Routers
		Updated: Annex DD. SVHC Candidate List
		Updated: Annex EE. REACH Authorization List of substances
2016-10-28	Version 6.8	Updated: 2.11.1 System Requirements for China
		Updated: Restrictions on Polychlorinated naphthalenes
		Updated: Exemption added for Red-P flame retardants (Plastic mechanical parts)
		Updated: Reference for Japan's Act on the Evaluation of Chemical Substances and
		Regulation of Their Manufacture, etc.
		Added: Note 9, Low Halogen Substance Requirements.
		Added: Low halogen power cord option and label requirements.
		Updated: Annex Q. Polybrominated diphenyl ethers (PBDEs)
		Added: Annex MM: Creosote, Coal Tar, Anthracene Etc.
		Added: Annex NN: Dibutyltin (DBT) Compounds
		Updated: Dicyclohexyl phthalate threshold and description
		Updated: Table4. Substances of Very High Concern (SVHC)
		Updated: Annex DD. SVHC Candidate List
		Updated: Threshold concentration for HBCDD
		Updated: Lenovo Guide to Full Material Disclosures (Version 2), new link
2017 02 20	<b>T</b> 7 • 60	Updated: Table 4, changed Deliverable to Article
2017-03-30	Version 6.9	Updated/corrected reporting threshold for HBCCD in Table 3.
		Updated/corrected Annex I titles regarding Polychlorinated naphthalene restrictions. Table 4 Update: Added New SVHC substances.
		4,4'-isopropylidenediphenol (bisphenol A; BPA)
		<ul> <li>4,4 -Isopropyridenediphenol (displication A, BFA)</li> <li>Nonadecafluorodecanoic acid (PFDA) and its sodium and ammonium salts</li> </ul>
		• p-(1,1-dimethylpropyl)phenol
		4-heptylphenol, branched and linear [substances with a linear and/or branched alkyl chain with a carbon number of 7 covalently bound
		predominantly in position 4 to phenol, covering also UVCB- and well-
		defined substances which include any of the individual isomers or a
		combination thereof]
		Updated: Annex DD. SVHC Candidate List
2017-04-10	Version 7.0	Updated: Product Energy Efficiency Requirements for Mexico (Sec. 2.11.6.1)
2017-10-02	Version 7.1	Table 1 Update: Added Bisphenol A (BPA), Tris (1,3-dichloro-2-propyl)
2017-10-02	Version 7.1	phosphate, Tris (2-chloroethyl) phosphate, REACH restriction for Decabromo
		diphenyl ether;
		Added Taiwan Green Mark material concentration requirements for RoHS
		substances and Shortchain Chlorinated Paraffins;
		Added China Environmental Product Labeling material threshold requirements for
		Medium Chain Chlorinated Paraffins.
		Table 3 Update: Added Dysprosium and compounds, Neodymium and compounds
		Praseodymium and compounds, Terbium and compounds, Tris (1,3-dichloro-2-
		propyl) phosphate (reporting only for cables, adaptors and other connecting devices,
		storage media such as compact discs, for interactive software, not for mice cables.)
		Section 2.2.1 Added Lenovo target to eliminate all SVHC's in a concentration of
		more than 0.1% w/w in the article by December 31th, 2020.
		Table 4 Update: Added New SVHC substance - Perfluorohexane-1-sulfonic acid
		and its salts (PFHxS Annex DD: Added new SVHC substance - Perfluorohexane-1-sulfonic acid and its
		salts (PFHxS); Added Lenovo target to eliminate all SVHC's in a concentration of
		more than 0.1% w/w in the article by December 31th, 2020.
L	1	more man 0.170 w/w in the article by December 31th, 2020.

2018-27-04	Version 7.2	Update: Added Sec 2.11.6.2 Mexico EPS efficiency and labeling requirements
		Update: Added Sec 2.11.9 Server and Data Storage Product (EU Requirements)
		Update: Annex DD: Added new seven (7) SVHC substances.
2018-28-08	Version 7.3	Update: Annex DD: Added new ten (10) SVHC substances.
		Update: Revised CEC and US DOE BCS requirements.
		Update: Added Sec 2.11.10 CEC Computer and Monitor efficiency requirements
2019-14-01	Version 7.4	Update: Added reference to RoHS 3 effective date for 4 phthaltes (DEHP, DPB,
		BBP, DIBP).
		Update: Removed Table 4 Substances of Very High Concern (SVHC) and directed
		users to link to current listing maintained by EU.
2010 01 07		Update: Annex DD: Added three (3) new SVHC Candidate substances.
2019-01-05	Version 7.5	Update: Table 1: Added Benzene, n-Hexane, Trichloroethylene,
		Tetrachloroethylene, Methylene Chloride
		Update: Table 7: Update battery regulation references for alkaline and zinc carbon
2010 00 00	<b>T</b> 7 • <b>T</b> 6	batteries
2019-09-09	Version 7.6	Update: Various url's and hyperlinks to new Lenovo sustainability web pages
		Update: Table 1 PFOA restrictions, effective dates and link to Annex XVII info. Update: Added Sec 2.1.2.1 China RoHS Conformity Assessment System
		Update: Sec 2.2.1 - deleted Lenovo target to eliminate all SVHCs in a concentration
		of more than 0.1% in the article by December 31, 2020.
		Update: Annex DD: Added four (4) new SVHC Candidate substances.
		• 2-methoxyethyl acetate,
		<ul> <li>Tris(4-nonylphenyl, branched and linear) phosphite (TNPP) with ≥ 0.1%</li> </ul>
		w/w of 4-nonylphenol, branched and linear (4-NP),
		• 2,3,3,3-tetrafluoro-2-(heptafluoropropoxy)propionic acid, its salts and its
		acyl halides (covering any of their individual isomers and combinations
		thereof),
		• 4-tertbutylphenol.
		Update: Organohalogen flame retardants added to Table 3 and Annex OO.
		Update: Added references to Washington and Colorado regulations to Sec 2.11.10.2
		Update: Updated Sec 2.11.4.6 BCS definitions and requirements for Canada.
		Update: Added EPEAT optional criteria requirements for Cadmium (4.1.2.1),
		Beryllium (4.1.4.1) and Brominated/Chlorinated flame retardants (4.1.5.2). Refer to
		IEEE STD 1680.1-2018.
2020-05-11	Version 7.7	Update: Sec 1.5.2 Added IEC 62474 - Material Declaration for Products of and for
		the Electrotechnical Industry to list of reference documents.
		Update: Sec 2.11.11 Added requirements for electronic displays for EU Regulation
		2019/2021 and EU Regulation 2019/2013.
		Update: Sec 2.11.4.4 Added EU regulation 2019/1782 for EPSs and requirements.
		Update: Annex DD: Added new four (4) SVHC substances.
		Update: Methylene Chloride (Dichloromethane) (CAS 75-09-2) restrictions updated.
		Update: GS Mark standard and requirements for Polycyclic Aromatic Hydrocarbons
		(PAH).  Undete Removed EDEAT Lead exitoria for Visual Display Units (4.1.4.1) IEEE Std.
		Update: Removed EPEAT Lead criteria for Visual Display Units (4.1.4.1; IEEE Std
		1680-2006) Update: Table 3, Added IEC 62474 Declarables List
		Update: Sec 4.0 References, added IEC 62474 Declarable substance groups and
		declarable substances.
		Update: Sec 2.3.3 Table 6 Plastic Marking nomenclature updated.
		Update: Sec 2.3.4 Plastic Marking nomenclature updated.
2020-06-25	Version 7.8	Update: Annex DD: Added new four (4) SVHC substances.
2020 00-23	7 (151011 7.0	Update: Add Sec 2.13 China VOC Standard Requirements

### Scope 1.0 Scope

### 1.1 Objectives

This Lenovo Engineering Specification establishes baseline environmental requirements for all \*Materials, Parts and Products that comprise a Lenovo hardware Product for which this specification is referenced in a Statement of Work, print, contract or other procurement documents. This specification implements Lenovo's environmental policy objectives and contains some, but not all, environmental legal requirements for Materials, Parts and Products.

Compliance with the requirements in this specification alone may not satisfy the Supplier's responsibilities to Lenovo since this specification does not encompass all environmental legal requirements in various countries around the world for Materials, Parts and Products. This specification also contains some restrictions on Materials and on certain chemicals used in manufacturing. It also requires suppliers to disclose information about the content of certain substances in their products. This specification also includes requirements for batteries, marking of plastic parts, and other product labeling requirements.

It is important to note that in addition to this specification, Lenovo also maintains environmental and/or related requirements in other specifications, contracts or procurement documents

#### 1.2 Definitions

**Article -** an object which during production is given a special shape, surface, or design which determines its function to a greater degree than does its chemical composition. In reference to EU REACH Substances of Very High Concern (SVHC), when a product is made up of more than one constituent Article, the SVHC concentration above 0.1% weight by weight applies to each constituent Article making up the product.

**Battery or accumulator:** any source of electrical energy generated by direct conversion of chemical energy and consisting of one or more primary battery cells (non-rechargeable) or consisting of one or more secondary battery cells (rechargeable). This definition is from the EU Directive 2006/66/EC on batteries and accumulators and waste batteries and accumulators.

**Consumer Product:** any article, or component part thereof, produced or distributed (i) for sale to a consumer for use in or around a permanent or temporary household or residence, a school, in recreation, or otherwise, or (ii) for the personal use, consumption or enjoyment of a consumer in or around a permanent or temporary household or residence, a school, in recreation, or otherwise. For exclusions please see the US Consumer Product Safety Act.

[Source: 15 U.S.C. United States Code Title 15 – Commerce and Trade Chapter 47 – Consumer Product Safety]

**Deliverable(s):** any tangible item(s) delivered by or for a Supplier to Lenovo in accordance with a purchase contract or other agreement with Lenovo. Deliverables include, but are not limited to,

components, materials, parts, and products.

**Electrical and Electronic Equipment (EEE):** means equipment which is dependent on electric currents or electromagnetic fields in order to work properly and equipment for the generation, transfer and measurement of such currents and fields and designed for use with a voltage rating not exceeding 1000 volts for alternating current and 1500 volts for direct current. This definition is from EU Directive 2012/19/EU of the European Parliament and of the Council of 4 July 2012 on waste electrical and electronic equipment (WEEE).

**Electronic Display:** means a display screen and associated electronics that, as its primary function, displays visual information from wired or wireless sources. [Source: EU Regulation 2019/2021 of 1 October 2019 laying down ecodesign requirements for electronic displays pursuant to Directive 2009/125/EC of the European Parliament and of the Council]

**EPEAT:** Electronic Products Environmental Assessment Tool (EPEAT). EPEAT is a procurement tool designed to help purchasers evaluate, compare and select desktop computers, laptops and monitors based upon their environmental attributes as specified in the IEEE Standard for the Assessment of Personal Computer Products (1680). Refer to: www.epeat.net

**Intentionally Added or Intentional Addition** shall mean that a substance is deliberately utilized in the production of a Material or Part.

**Materials** are chemical substances and preparations that are supplied for the production of Parts and Products (for example structural plastics, metals, coatings, paints, adhesives) and chemical substances or preparations that are shipped with Products, such as toner, cleaners, lubricants, oils, and refrigerants.

**Not Detected** - Below the detection limit of established test standards or appropriate industry wide test methods. In general, these test standards/ methods should achieve trace level detection or at the lowest detection capabilities of the specific sample matrix.

Homogenous Material is a unit that cannot be mechanically disjointed into different materials. The term "Homogenous" means having uniform composition throughout. Examples of homogenous materials are individual types of plastics, ceramics, glass, metals, alloys, resins, and coatings. Mechanically disjointed means that the materials can, in principle, be separated by mechanical actions such as unscrewing, cutting, crushing, grinding, and abrasive processes.

**Parts** include fabricated Materials, components, devices and assemblies.

**Placing on the market**: means making a product available for the first time on the Community market with a view to its distribution or use within the Community, whether for reward or free of charge and irrespective of the selling technique. [Source: EU Directive 2009/125/EC of the European Parliament and of the Council of 21 October 2009 establishing a framework for the setting of ecodesign requirements for energy-related products]

**Preparation:** a mixture or solution composed of two or more substances, for example paint, lubricant or ink. This definition is found in the EU Council Directive relating to restrictions on the marketing and use of certain dangerous substances and preparations and EU Regulation 1907/2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH).

**Products** are stand alone, final assemblies that Lenovo markets under its own brand including complete machines supplied by an original equipment manufacturer (OEM) to Lenovo for sale under a Lenovo brand.

**Putting into service**: means the first use of a product for its intended purpose by an end-user in the Community. [Source: EU Directive 2009/125/EC of the European Parliament and of the Council of 21 October 2009 establishing a framework for the setting of ecodesign requirements for energy-related products]

**RoHS** - an acronym for the European Union Directive 2011/65/EU on the Restriction of the use of certain Hazardous Substances in electrical and electronic equipment and subsequent amendments to this Directive.

**RoHS substances:** substances restricted by European Union Directive 2011/65/EU, "Restriction on the Use of Certain Hazardous Substances (RoHS) in Electrical and Electronic Equipment" Refer to Lenovo RoHS Engineering Specification 41A7733.

**REACH:** an acronym for the European Commission Regulation Number 1907/2006 concerning the Registration, Evaluation, Authorisation and Restriction of CHemicals.

Substance: a chemical element and its compounds in the natural state or obtained by any manufacturing process, including any additive necessary to preserve its stability and any impurity deriving from the process used, but excluding any solvent which may be separated without affecting the stability of the substance or changing its composition. This definition is found in the EU Council Directive relating to restrictions on the marketing and use of certain dangerous substances and preparations and EU Regulation 1907/2006 concerning the Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH). Substance includes such examples as ethanol and metals. Note: metals are included here not in the form of a part or product such as a heat sink or sheet metal cover but as a metal such as aluminum or aluminum alloy. Substance goes beyond a pure chemical compound defined by a single molecular structure. The definition of the substance includes different constituents such as impurities. Also note the word "substance" is used throughout this specification, only the "Substance" with a capital letter refers to this specific definition.

#### **Substance(s) of Very High Concern (SVHC)**

1. Substances meeting the criteria for classification in accordance with EU Directive 67/548/EEC:

- Carcinogenic category 1 or 2
- Mutagenic category 1 or 2
- Toxic for reproduction category 1 or 2;
- 2. Substances which are persistent, bioaccumulative and toxic (PBT) or very persistent and very bioaccumulative (vPvB) in accordance with the criteria set out in Annex XIII of the EU REACH Regulation;
- 3. Substances- such as those having endocrine disrupting properties or those having PBT properties or vPvB properties which do not fulfill the criteria of 2 above for which there is scientific evidence of probable serious effects to human health or the environment which give rise to an equivalent level of concern to those of other substances listed in 1 or 2 and which are identified on a case-by-case basis in accordance with the procedure set out in Article 59 of REACH. This definition is from the EU REACH Regulation, Article 57.

**WEEE** - an acronym for the European Union Directive 2012/19/EU of the European Parliament and of the Council on Waste Electrical and Electronic Equipment.

**Threshold Level:** concentration level or limit (equal to or) above which the presence of a substance or material in a product or subpart must be declared. Threshold levels are provided in ppm (and mass %). The general conversion used is 1000 ppm = 0.1% by weight.

#### 1.3 Application

This specification applies to all Materials, Parts, and Products supplied for Lenovo brand hardware Products that reference this specification. All suppliers must comply with Sections 2.1 through 2.2 and 3.0 of this specification and their corresponding tables. In addition suppliers of Parts or Products containing molded thermoplastics must comply with Section 2.3. Suppliers of Parts and Products containing batteries must comply with Section 2.4. Suppliers of Parts and Products having decorative metal finishes must comply with section 2.5. Suppliers of Parts and Products containing mercury must comply with Section 2.6. Suppliers of chemicals must comply with Section 2.7. Suppliers of Products and operating chemicals (e.g., toner) must comply with Section 2.8. Products defined by the European Union as electrical and electronic equipment (EEE) for the Directive on Waste Electrical and Electronic Equipment (2012/19/EU) must comply with Section 2.9. Suppliers are responsible for compliance with this specification in their own operations, in their subcontracted operations, and in the Materials they procure for the manufacture of components, Parts, assemblies, and Products for Lenovo hardware.

Compliance with the requirements in this specification alone may not satisfy the supplier's responsibilities to Lenovo since this specification does not necessarily encompass all applicable environmental requirements for Materials, Parts and Products.

In the event of conflict between this specification and any Lenovo part drawing requirement, suppliers shall immediately notify their Lenovo procurement representative. Any deviation from the requirements of this specification must have prior written approval by Lenovo's procurement representative.

#### 1.4 Document Administration

This document is maintained and controlled by Lenovo Global Environmental Affairs. Technical questions regarding the requirements in this specification may be referred through Lenovo procurement to:

Alvin Carter

**Environmentally Conscious Product Team Lead** 

Phone: 919-294-0420 <u>alcarter@lenovo.com</u>

Lenovo requires Suppliers to provide Declarations confirming that materials, parts and products meet the requirements of Lenovo's Restricted Materials Specifications. At Lenovo's request, the supplier may be asked to provide additional technical documentation or test results supporting the declaration.

- Lenovo Supplier Material Self-Declaration
- Lenovo Guide to Full Material Disclosure

### 2.0 Requirements

#### 2.1 Restricted Substances

#### 2.1.1 Lenovo Restrictions

**Table 1**, "Restricted Substances," lists restrictions for categories of substances which are restricted for use in Materials, Parts, and Products for Lenovo hardware. The scope of restrictions varies by substance category. Relatively few categories have general bans; most restrictions pertain to limited applications for the substance categories. Details of the restrictions for each category are provided in **Table 1** along with some applicable regulatory references. These references are not intended to be a complete list, but rather examples of the regulations driving these restrictions. Restrictions on chemicals used in manufacturing of Lenovo hardware Products may also be included as specified in the table or notes. Expanded listings of relevant substances in each of the categories are available in the Annexes for this specification referenced in **Table 1**.

Table 1. Restricted Substances		
Chemical Substance Category	Details of Restriction	Regulatory/
		Industry
		References
Acids generated from chromium trioxide and their oligomers. Group containing: Chromic acid (CAS 7738-94-5); dichromic acid (CAS 13530-68-2); oligomers of chromic acid and dichromic acid (CAS not yet assigned)	Prohibited at or above 0.1% weight by weight of the Article	1
Acrylamide (CAS 79-06-1)	Shall not be used as a substance or constituent of mixtures in a concentration equal to or greater than 0.1% by weight for grouting applications.	1
Ammonium dichromate (CAS 7789-09-5)	Prohibited at or above 0.1% weight by weight of the Article.	1
Arsenic and compounds (Annex S)	Prohibited in wood products and paints.	1, 2
Asbestos (Annex A)	Prohibited Must not be used. Report any content.	1, 2, 3 JIG 101 Ed. 4.1
Azo colorants (Annex B)	Azodyes which may release one or more aromatic amines (listed in 1B, 1J, 2 Annex B (1)) are prohibited above 30 ppm in textile and leather articles which may come into direct and prolonged contact with human skin.  Azodyes (listed in Annex B (2)) are prohibited in concentrations above 0.1% by weight in colorants for textile and leather articles (e.g., fabrics for headphones and wrist straps).	1, 2 JIG 101 Ed. 4.1
Benzene (CAS 71-43-2)	Prohibited in Manufacturing and in clothing or related accessories, and textiles which under normal or reasonably foreseeable conditions of use come into contact with human skin - concentration limit of 5 mg/kg. Disposable textiles, not for clothing, are exempt.	1
Benzenamine, N-phenyl-, reaction products with styrene and 2,4,4-trimethylpentene (CAS 68921-45-9)	Prohibited	15
Benzidine, CAS No 92-87-5, and its salts	Prohibited	1, 2, 12, 15,38
Benzo[a]pyrene (CAS No 50-32-8)	Prohibited in wood based materials in excess of 0.5 milligrams per kilogram of dry matter.	2
Biocidal product as defined in EU Regulation 528/2012 concerning the making available on the market and use of biocidal products	Prohibited on or in Deliverables, for example, prohibited for use as a treatment on Deliverables where the biocidal product is expected to remain on the Lenovo Deliverable. This restriction shall not apply to treated articles where the sole treatment undertaken was the fumigation or disinfection of premises or containers used for storage or transport and where no residues are expected to remain from such treatment on the Lenovo Deliverable.	41

	<del>_</del>	
Dibutyltin (DBT) compounds (Annex NN)	Prohibited in Mixtures and Articles where the concentration in the Mixture or Article, or part thereof, is greater than the equivalent of 0.1% by weight of tin.	26
Dimethylfumarate (CAS 624-49-7)	Prohibited in Products, Parts, and Deliverable greater than 0.1 mg/kg of the weight of the Product, Part or Deliverable. Prohibited in pouches (e.g., desiccants) and in chemicals, Substances, and Preparations.	1,31
2,4-Dinitrotoluene (CAS 121-14-2)	Prohibited at or above 0.1% weight by weight of the Article.	1
Dioctyltin (DOT) compounds (e.g., dioctyl tin oxide CAS 870-08-6 and dioctyltin dilaurate (CAS 3648-18-8)	Prohibited in concentrations greater than the equivalent of 0.1% by weight of tin in:  1. Textile articles intended to come into contact with skin, and 2. Two-component room temperature vulcanization molding kits (RTV-2 molding kits).	26
Formaldehyde CAS No 50-00-0	Materials capable of releasing formaldehyde into the air, under reasonably foreseeable conditions of use at concentrations reaching or exceeding 0.1ppm are prohibited.  The use of formaldehyde in textiles intended for skin contact is	25
	prohibited (e.g. Wrist straps and headphones) above 120 mg/kg formaldehyde.  The use of formaldehyde in wood applications may not be used if the formaldehyde emission caused by the wooden materials	20,21
	exceeds 0.1 ml/m3 (ppm) in the air of a test chamber. Formaldehyde emission standards in Composite Wood must not exceed the following limits (see Section 2.12 for more details): Hardwood Plywood Veneer Core - 0.05ppm Hardwood Plywood Composite Core - 0.05ppm Particleboard - 0.09ppm Medium Density Fiberboard - 0.11 ppm Thin Medium Density Fiberboard - 0.13 ppm	24
Halogenated aromatic substances (Annex C)	Prohibited from use in capacitors and transformers above 500 ppm for monohalogenated or 50 ppm for polyhalogenated aromatic substances in materials of the component.	1, 2
Halogenated diphenyl methanes (Annex D)	Prohibited	1, 12
Halogenated Flame Retardants	Prohibited in the enclosure and stand of Electronic Displays	52
Hexabromocyclododecane (HBCDD) and all major diastereoisomers identified (alpha HBCDD, beta HBCDD, gamma HBCDD) (CAS 25637-99-4, 3194-55-6, 134237-50-6, 134237-51-7, 134237-52-8)	Prohibited at or above 0.01% weight by weight of the Article.	1
Hexachlorobenzene (CAS 118-74-1)	Prohibited except if incidentally present.	15,37
Hexachlorobutadiene (CAS 87-68-3)	Prohibited	10, 15
Hexachloroethane (Annex F)	Prohibited in manufacturing or processing of nonferrous metals.  Prohibited in Substances and Preparations	1, 2, 15 37
Hexavalent Chromium/Hexavalent Chromium Compounds (Annex M)	Intentionally Added in homogenous material RoHS Substance: allowance made for RoHS exemptions  Intentional Addition is prohibited by Lenovo in paints and plastic resins.	1,53
	Prohibited in leather articles or articles containing leather parts coming into contact with skin in concentrations equal to or greater	

	4 2 4 (0.00020/1 11.0 6.4 (1.1 11.1 6.4	
	than 3 mg/kg (0.0003% by weight) of the total dry weight of the leather.	
	Taiwan Green Mark Products: 10 ppm in homogenous material for >25g plastic component	45
Hydrofluorocarbons (Annex EE)	Prohibited in non-refillable containers, foams, and non-confined, direct evaporation systems containing refrigerants.	30
Lead chromate (CAS 7758-97-6) (Please note hexavalent chromium and lead are prohibited for use in Deliverables.	Prohibited at or above 0.1% weight by weight of the Article.	1
Lead chromate molybdate sulphate red (Color Index Pigment Red 104) (CAS 12656- 85-8)) (Please note hexavalent chromium and lead are prohibited for use in Deliverables.	Prohibited at or above 0.1% weight by weight of the Article.	1
Lead/Lead Compounds (Annex N)	1000 ppm or Intentionally Added in homogenous Material RoHS Substance: allowance made for RoHS exemptions	Annex N 1, 12
	Paints and varnishes shall not have lead or lead compounds with a lead content of 0.01% or more by mass. The prohibition is also for Articles treated with such paints and varnishes.	2
	External PVC cables, wire coatings: 300 ppm	California Health and Safety Code sections 25214.9-
	For restrictions in battery applications see <b>Table 7</b>	25214.10.2
	GENERAL LEAD: 100ppm	Public Law 110– 314 (Consumer Product Safety
	LEAD PAINT 90ppm	Improvement Act of 2008)
	Taiwan Green Mark Products: For >25g plastic component: 2ppm in homogenous material; 20ppm in post-consumer plastic material or add glass fiber plastic material for those safety component which have high temperature requirements	45
Lead sulfochromate yellow (Color Index Pigment Yellow 34) (CAS 1344-37-2, see Annex II for deleted CAS numbers.) (Please note hexavalent chromium and lead are prohibited for use in Deliverables.	Prohibited at or above 0.1% weight by weight of the Article.	1
Mercury/Mercury Compounds (Annex O)	Must not be present; except in lamps. RoHS Substance: allowance made for RoHS exemptions	Annex O 1, 2, 8, 9, 12, 13, 17, 18, 39
	In exempt applications, labeling requirements and maximum content limits apply (see <b>Section 2.6</b> ); when present in an approved application, Lenovo must be supplied with a data sheet on mercury content.	JIG 101 Ed. 4.1

	For mercury restrictions in batteries, see <b>Table 7</b>	
	Taiwan Green Mark Products: 10 ppm in homogenous material for >25g plastic component	45
Methylene Chloride (Dichloromethane) (CAS 75-09-2)	Prohibited in Manufacturing and in Substances, Mixtures, Preparations, Field Use Materials, and Chemical Product Supplies.  Prohibited in paint strippers (including also varnish removers and lacquer removers.), in concentrations equal to or greater than 0.1% by weight	1, 2, 28
Middle Chain Chlorinated Paraffins	China Environmental Labeling Products: 1000ppm for >25g plastic component	46
2-(2-methoxyethoxy)ethanol (DEGME) (CAS 111-77-3)	Prohibited in paints, paint strippers, cleaning agents, and self-shining emulsions in concentrations equal to or greater than 0.1% by weight.	1
Monomethyl- dibromodiphenyl methane bromobenzylbromo-toluene, mixture of isomers (Trade name DBBT) (CAS 99688-47-8)	Prohibited in Substances, Mixtures, and Articles.	26
Monomethyl-dichloro- diphenyl methane (Trade names Ugilec 121 and Ugilec 21) (CAS 81161-70-8)	Prohibited in Substances, Mixtures, and Articles.	26
Monomethyltetrachlorodiphenyl Methane (Trade name Ugilec 141) (CAS 76253-60-6)	Prohibited in Substances, Mixtures, and Articles.	26
Nanomaterials. Substance produced in nanoparticular state: a substance containing particles, in an unbound state or as an aggregate or as an agglomerate and where, for 50 % or more of the particles in the number size distribution, one or more external dimensions is in the size range of 1 nanometer (nm) to 100 nm, with the exception of natural, nonchemically modified substances and the substances of which the fraction between one nanometer and one hundred nanometers is a by-product of human activity. Fullerenes, graphene flakes and single and multi-walled carbon nanotubes with one or more external dimensions below 1 nm shall be deemed to be substances produced in nanoparticular state. Other common nanomaterials include silver nanoparticles, iron nanoparticles, titanium dioxide, aluminum oxide, cerium oxide, zinc oxide, silicon dioxide and dendrimers with external dimensions listed above.	Prohibited in Articles and complex objects (an object consisting of a set of Articles) where a fraction of at least one of the substances produced in nanoparticular state exceeding 0.1 % of the mass originally contained in the Article or complex object is released.  Nickel finishes are prohibited on Product surfaces that are	40
Nickel (Annex E)	Nickel finishes are prohibited on Product surfaces that are designed to be in prolonged contact with skin	1
Nitrogen trifluoride (CAS 7783-54-2)	Prohibited in Preparations and Articles.	2
Nonylphenol ethoxylates	Prohibited in textile articles in concentrations equal to or greater	1

(Annex LL)	than 0.01% by weight of the textile article or of each part of the textile article.	0.5
Ozone-Depleting Substances (CFCs, HCFCs, HBFCs, carbon tetrachloride, etc.) (Annex F)	Prohibited in Substances, Mixtures, and Preparations.  Prohibited for Products to contain or be manufactured with these substances	37 2, 5, 6, 7, 12 JIG 101 Ed. 4.1
Pentachlorophenol (CAS No 87-86-5) and its salts and esters	Prohibited in the treatment of wood. Prohibited in wood based materials in excess of 3 milligrams per kilogram of dry matter. Prohibited in textiles and leather articles Prohibited in chemicals Prohibited	1, 2, 10 47, 49 48
Perfluorinated compounds (Annex JJ has a complete list of regulated substances)	Prohibited	30
Perfluorocarbons (PFC) (Annex G)	Must not be contained in Products; not prohibited from use in production of Products in which the gas is not present in the final Product	4, 27, 30
Perfluorooctane sulfonates (PFOS) and salts, C8F17SO2X (X=OH, metal salt, halide, amide and other derivatives including polymers), or Compounds that contain C8F17SO2, C8F17SO3 or C8F17SO2N, (for a list of PFOS CAS numbers see OECD ENV/JM/MONO(2006) 15 at http://appli1.oecd.org/olis/2006doc.nsf/li nkto/env-jm-mono(2006)15	Prohibited as a Substance or as a constituent of Preparations.  Prohibited in products or parts.  The above shall not apply to the following applications: photoresists or anti reflective coatings for photolithography processes, and photographic coatings applied to films, papers or printing plates.  Refer to the EU Directive and the Canada Regulations referenced for more details on these requirements and exemptions.	1, 2, 10, 15, 33, 36
Perfluorooctanoic Acid (PFOA) (CAS 335-67-1) its salts and PFOA related compounds which are any substances that degrade to PFOA, including any substances (including salts and polymers) having a linear or branched perfluoroheptyl group with the moiety (C <sub>7</sub> F <sub>15</sub> ) C as one of the structural elements and any related substance (including its salts and polymers) having a linear or branched perfluorooctyl group with the formula C8F17- as one of the structural elements. (Annex II)	Prohibited in Substances, Constituents of Substances, or Mixtures in a concentration equal to or above 25 ppb of PFOA including its salts or 1000 ppb of one or a combination of PFOA-related substances. Shall not be used in the production of or placed on the market in an Article in the concentrations listed above. (The restriction for Article is effective July 4, 2020).  See EU Regulation 1907/2006 Annex XVII # 68 for more details of the restrictions, effective dates, limited exemptions and descriptions of PFOA substances.	1, 36, 53, 54
Phenol, 2- (2H - benzotriazol -2-yl) - 4,6-bis (1,1- dimethylethyl)- (CAS No 3846-71-7)	Prohibited in decorative laminate, adhesives, paints, printing inks, inked ribbon, and molded plastic products.	10
Phthalates: Benzyl butyl phthalate (BBP) (CAS 85-68-7), Bis (2-ethylhexyl) phthalate (DEHP) (CAS 117-81-7), Dibutyl phthalate (DBP) (CAS 84-74-2), Diisobutyl phthalate (DIBP) (CAS 84-69-5)	Prohibited at or above 0.1% by weight (or 1000ppm) in homogeneous materials.  (Please note these substances are prohibited elsewhere in this specification. The more restrictive level applies, which will generally be this entry.)  The restriction of DEHP, BBP, DBP and DIBP shall apply to medical devices, including in vitro medical devices, and monitoring and control instruments, including industrial	50, 51

		1
	monitoring and control instruments, from 22 July 2021. For all	
Polybrominated Biphenyls (PBBs) (Annex P)	other equipment the restriction is in effect.  Prohibited	1, 2, 12, 10, 15 33, 37 JIG 101 Ed. 4.1
Polychlorinated naphthalenes, C <sub>10</sub> H <sub>8-n</sub> Cl <sub>n</sub> where "n" is greater than or equal to1	Prohibited	10 JIG 101 Ed. 4.1
(Annex I)	Any PCNs (1 or more chlorine atoms) must not be used.	Lenovo
		Requirement
Polychlorinated biphenyls (PCBs) (Annex H)	Prohibited. (Please note PCBs are prohibited by other regulations; see halogenated aromatic substances in Table 1 and Annex O.)	1, 10, 12, 33, 34
Polychlorinated terphenyls (PCTs)	Prohibited	1, 12, 15
Polycyclic Aromatic Hydrocarbons (PAH)		Annex CC.
Benzo[a]pyrene Benzo[a]anthracene Benzo[b]fluoranthene Benzo[j]fluoranthene Benzo[k]fluoranthene Chrysene Dibenzo[a,h]anthracene Benzo[g,h,i]perylene Indeno[1,2,3-c,d]pyrene	Category 1 (<0.2mg/kg) Materials intended to be placed in the mouth, or materials in toys (Directive 2009/48/EC) or articles for children up to 3 years of age with intended long-term skin contact (> 30 seconds)  Category 2 Materials that are not in Category 1, with intended or foreseeable long-term skin contact (> 30 seconds) or short-term repetitive contact with the skin.  2a. Use by children under 14: (<0.2mg/kg)  2b. Other consumer products: (<0.5mg/kg)  Category 3  Materials not covered by Category 1 or 2, with intended or foreseeable short-term skin contact (≤ 30 seconds).  3a. Use by children under 14: (<0.5mg/kg)  3b. Other consumer products: (<1mg/kg)	German AfPS GS 2019:01 PAK for GS certification
Phenanthrene, Pyrene, Anthracene, Fluorathene	Category 1 (<1mg/kg sum)  Materials intended to be placed in the mouth, or materials in toys (Directive 2009/48/EC) or articles for children up to 3 years of age with intended long-term skin contact (> 30 seconds)  Category 2  Materials that are not in Category 1, with intended or foreseeable long-term skin contact (> 30 seconds) or short-term repetitive contact with the skin.  2a. Use by children under 14: (<5mg/kg sum)  2b. Other consumer products: (<10mg/kg sum)  Category 3  Materials not covered by Category 1 or 2, with intended or foreseeable short-term skin contact (≤ 30 seconds).  3a. Use by children under 14: (<20mg/kg sum)  3b. Other consumer products: (<50mg/kg su)	

		ı
Naphthalene  Sum of 15 PAHs***	Category 1 (<1mg/kg) Materials intended to be placed in the mouth, or materials in toys (Directive 2009/48/EC) or articles for children up to 3 years of age with intended long-term skin contact (> 30 seconds)  Category 2 Materials that are not in Category 1, with intended or foreseeable long-term skin contact (> 30 seconds) or short-term repetitive contact with the skin.  2a. Use by children under 14: (<2mg/kg) 2b. Other consumer products: (<2mg/kg)  Category 3 Materials not covered by Category 1 or 2, with intended or foreseeable short-term skin contact (≤ 30 seconds).  3a. Use by children under 14: (<10mg/kg) 3b. Other consumer products: (<10mg/kg)  Category 1 (<1mg/kg) Materials intended to be placed in the mouth, or materials in toys (Directive 2009/48/EC) or articles for children up to 3 years of age with intended long-term skin contact (> 30 seconds)  Category 2  Materials that are not in Category 1, with intended or foreseeable long-term skin contact (> 30 seconds) or short-term repetitive contact with the skin.  2a. Use by children under 14: (<5mg/kg) 2b. Other consumer products: (<10mg/kg)  Category 3  Materials not covered by Category 1 or 2, with intended or foreseeable short-term skin contact (≤ 30 seconds).  3a. Use by children under 14: (<20mg/kg) 3b. Other consumer products: (<50mg/kg)	
Potassium chromate (CAS 7789-00-6)	Prohibited at or above 0.1% weight by weight of the Article.	1
Potassium dichromate (CAS 7778-50-9)	Prohibited at or above 0.1% weight by weight of the Article.	1
Polyvinyl chloride (PVC) (Annex Y)	External covers for Lenovo products must not contain Polyvinyl Chloride (PVC). Sheathing for wires and cables, connectors, and electronic components are exempt from this requirement.	Lenovo Commitment
Radioactive Substances (Annex Z)	Intentionally addition is prohibited	JIG 101 Ed. 4.1
Red Phosphorous (Red-P) flame retardants in:	Intentionally addition is prohibited	Lenovo Requirement
Printed circuit boards, printed circuit assemblies, electrical and electronic components, packaging materials such as encapsulates, die attach materials, underfill epoxies and substrates		
Exemption: Does not apply to mechanical case parts; i.e., covers		

Sodium chromate (CAS 7775-11-3)	Prohibited at or above 0.1% weight by weight of the Article.	1
Sodium dichromate (CAS 7789-12-0 and 10588-01-9)	Prohibited at or above 0.1% weight by weight of the Article.	1
Shortchain Chlorinated Paraffins (Annex J)	Prohibited at or above 0.1% weight by weight of the Article.	1, 2, 12, 36 JIG 101 Ed. 4.1
	If present below 0.1% by weight of the product, it must be only incidentally present.	15
	Taiwan Green Mark Products: 10 ppm in homogenous material for >25g plastic component	45
Substances subject to REACH Authorization found in Annex XIV of REACH regulation and amendments (Annex EE) in this specification lists current authorized substances as of date of this specification)	Prohibited at or above 0.1% weight by weight of the Article.	1
Sulphur hexafluoride (CAS 2551-62-4)	Prohibited in Preparations and Articles. Prohibited in foams and nonrefillable containers.	2, 27, 30
Tetrachlorobenzenes (CAS numbers included in Annex C)	Prohibited	15
Tetrachloroethylene (perchloroethylene) (CAS 127-18-4)	Prohibited in Manufacturing and in Substances, Mixtures, Preparations, Field Use Materials, and Chemical Product Supplies, including but not limited to adhesives, paints, and cleaning agents	10, 28
Trichloroethylene (CAS 79-01-6)	Prohibited in Manufacturing and in Substances, Mixtures, Preparations, Field Use Materials, and Chemical Product Supplies, including but not limited to adhesives, paints, and cleaning agents.	10, 28
Toluene (CAS 108-88-3)	Prohibited as a Substance or constituent of Preparations in concentrations equal to or greater than 0.1% by mass in adhesives and spray paints.	1
Tributal Tin (TBT) and Triphenyl Tin (TPT)	Prohibited in Articles, or part thereof, where the concentration in the article is greater than the equivalent of 0.1% by weight of tin.	1, 15 ЛС 101 Ed. 4.1
Tributyl Tin Oxide (TBTO) (Annex K)	Intentional Addition is prohibited in chemical products	10 JIG 101 Ed. 4.1
Tris (1,3-dichloro-2-propyl) phosphate (CAS 13674-87-8)  Tris (2,3 dibromopropyl)	Prohibited above 0.1% by mass in any product component.  Exempt from this requirement are cables (except cables for mice), adaptors and other similar connecting devices and storage media, such as compact discs, for interactive software, such as computer games. This substance is prohibited in cables for mice. If a replacement flame retardant for this substance is used, it cannot be a substance classified as a "known to be a human carcinogen" or "reasonably anticipated to be a human carcinogen" as listed by the US National Toxicology Program in the US Department of Health and Human Services; classified as "carcinogenic to humans" or "likely to be carcinogenic to humans" by the US Environmental Protection Agency; or identified by the US Environmental Protection Agency or the US National Institutes of Health as causing birth defects, hormone disruption, neurotoxicity, or harm to reproduction or development.	14, 42
phosphate CAS No 126-72-7 and Tris-(aziridinyl) - phosphineoxide	contact with skin, e.g. Wrist straps and headphones.  Prohibited in Substances and Preparations	37
CAS No 545-55-1 Tris(2-chloroethyl) phosphate	Prohibited at or above 0.1% by mass in any product component.	14, 42

(CAS 115-96-8)	This restriction does not apply to desktop and laptop computers,	
	audio and video equipment, calculators, wireless telephones, game	
	consoles, handheld devices incorporating a screen that are used to	
	access interactive software and their associated peripherals, and	
	cables, adaptors and other similar connecting devices (except	
	cables for mice). This substance is prohibited in cables for mice.	
	(Note: If a replacement flame retardant for this substance is used,	
	it cannot be a substance classified as a "known to be a human	
	carcinogen" or "reasonably anticipated to be a human carcinogen"	
	as listed by the US National Toxicology Program in the US	
	Department of Health and Human Services; classified as	
	"carcinogenic to humans" or "likely to be carcinogenic to	
	humans" by the US Environmental Protection Agency; or	
	identified by the US Environmental Protection Agency or the US	
	National Institutes of Health as causing birth defects, hormone	
	disruption, neurotoxicity, or harm to reproduction or	
	development.)

#### **2.1.2 EU RoHS**

The DIRECTIVE 2011/65/EU OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of 8 June 2011 bans the use of the following in new electrical and electronic products put on the market after July 1, 2006:

- Lead (Pb),
- Mercury (Hg),
- Cadmium (Cd),
- Hexavalent chromium (Cr<sub>+6</sub>),
- Polybrominated biphenyl (PBB) flame retardants and
- Polybrominated diphenyl ether (PBDE) flame retardants.
- Bis (2-ethylhexyl) phthalate (DEHP)<sup>1</sup>
- Butyl benzyl phthalate (BBP) 1
- Dibutyl phthalate (DBP) 1
- Diisobutyl phthalate (DIBP)<sup>1</sup>

<sup>1</sup>On 4 June 2015, the EU commission published a new Directive (EU) 2015/863 to amend Annex II to EU RoHS 2 (Directive 2011/65/EU) to add the following 4 phthalates onto the list of restricted substances. Restriction become effective July 22, 2019.

Lenovo **Engineering Specification** 41A7733 provides the detailed requirements.

Certain substances affected by the European Commission's Directive 2011/65/EU on the Restriction of the Use of Certain Hazardous Substances in Electrical and Electronic Equipment (RoHS) are already restricted by other regulations at concentration levels that are more stringent than those associated with RoHS compliance. **Table 1** presents the requirements for these substances as defined by certain existing legislation and/or Lenovo internal standards.

#### 2.1.2.1 Other Jurisdictions

There are other jurisdictions, other than the EU Member States, with RoHS types of requirements. The list below is not complete and is provided for information only. In some jurisdictions the product scope and requirements are different from the scope and requirements of the EU Directive. Deliverables to Lenovo which cite this specification must meet the requirements of this specification irrespective of the jurisdiction where the Deliverable is transferred to Lenovo.

- Multiple US States
- New York City
- People's Republic of China
- European Economic Area (EEA) States
- European Free Trade Association (EFTA) States
- EU Candidate Countries Albania, Montenegro, Macedonia, Serbia, and Turkey
- EU potential Candidate Countries Bosnia and Herzegovina, KosovoBrazil
- EAEU
- UAE
- Korea
- Ukraine
- Vietnam
- India
- Japan
- Thailand

### 2.1.2.1 China RoHS Conformity Assessment System

According to Arrangements for the Implementation of the RoHS Conformity Assessment System for Electrical and Electronic Products (hereinafter referred to as "Arrangements"), which are hereby announced. All products that are included in the Management Catalogue of Electrical and Electronic Products (EEP) that Should Meet the RoHS Standards and are shipped out of factory or imported after November 1, 2019 shall meet the requirements of the Arrangements.

#### **Modes of Conformity Assessment**

- The unified voluntary RoHS certification scheme introduced by the State for EEPs (hereinafter referred to as "State-introduced voluntary certification")
- The supplier's declaration of RoHS conformity for EEPs (hereinafter referred to as "SDoC")

The supplier of an EEP included in the Management Catalogue shall choose the State-introduced voluntary certification mode or SDoC mode to complete the RoHS conformity assessment. Product conformity information should be submitted to China RoHS public service platform within 30 days after the product is put on the market. And Enterprise self-declaration and technical support documents are conformity information for SDoC mode.

#### **Labels of Conformity Assessment**

The below Design I will be used as the conformity assessment label for the products undergoing the State-introduced voluntary certification, and The identification of the certification authority in the box should be confirmed with the corresponding certification authority. While Design II will be used as the conformity assessment label for the products going through the SDoC procedure.

Vector drawings of basic patterns of green product identification can be downloaded on the information platform. Green product labels can be scaled up or down, and should be clearly identifiable after labeling.

Unless otherwise required by relevant systems or certification bodies, enterprises can independently choose any manufacturing process (such as printing, molding, etc.) to use or display the green product logo on the product body, nameplate, packaging, attached documents (such as instruction manual, qualification certificate, etc.), operating system, electronic sales platform, etc.

The color of green product logo should be white background plate, green pattern.

For China RoHS and China RoHS Conformity Assessment related requirement, please refer to <a href="http://www.cesi.cn/rohs/page/fgptbz.jsp?catalog=/001/001-008/001-008-006/001-008-006-001">http://www.cesi.cn/rohs/page/fgptbz.jsp?catalog=/001/001-008/001-008-006/001-008-006-001</a>

28June2020 Page 33 of 190 Version 7.8

### 2.1.3 Additional Requirements for "Low Halogen" Products

Lenovo's plans require the elimination of brominated and chlorinated flame retardants (BRFs, CFR) and polyvinyl chloride (PVC) in new products starting in 2010. These plans are dependent upon the identification and availability of safe, environmentally proven alternative materials that do not compromise product safety, reliability or performance. The alternative materials identified must also be:

- Equal to or better than existing materials in quality, reliability, performance
- Cost competitive
- Available in high volume
- Continue to meet applicable regulatory requirements, international fire safety standards and agency certification requirements.

Lenovo "Low Halogen" materials, parts and products must meet all of the following requirements:

Table 2. "Low Halogen" Substance Requirements			
Substance	Threshold Level		Reference
All Printed Circuit Board (PCB) and substrate laminates materials must meet Bromine (Br) and Chlorine (Cl) requirements for low halogen as defined in IEC 61249-2-21. Printed Circuit Board (PCB) and substrate laminates do not include the solder mask. Solder mask is considered		•	IEC 61249-2-21 JEDEC - JEP709 EPEAT 4.1.5.2 - (IEEE STD 1680.1-2018)
a separate homogenous plastic material.  Bromine (Br)	Maximum concentration of 900 ppm (0.09%) by weight		
Chlorine (Cl)	Maximum concentration of 900 ppm (0.09%) by weight  Note: Combined total concentration of bromine and chlorine must not exceed 0.15 % (1500ppm) by weight		
All other materials and components, with the exception of Printed Circuit Board (PCB) and substrate laminates, must meet the following requirements:  Bromine (Br) in Brominated Flame Retardants (BFRs)	Less than 1000 ppm (0.1%) by weight in homogenous materials	•	IEC 61249-2-21 JEDEC - JEP709 JIG 101 Ed. 4.1 EPEAT 4.1.5.2 - (IEEE STD 1680.1-2018)
Chlorine (Cl) in Chlorinated Flame Retardants (CFRs) or Polyvinyl Chloride (PVC)	Less than 1000 ppm (0.1%) by weight in homogenous materials		

#### Note:

- 1. Halogens fluorine (F), iodine (I), and a statine (At) are not restricted
- 2. Any materials and components other than PCB laminates and prepreg materials fall under item 2 "All other." in Table 2 above.

28June2020 Page 34 of 190 Version 7.8

- 3. A listing of BFR compounds may be found in the Joint Industry Guide (JIG) 101-A Annex (www.eia.org)
- 4. Low Halogen materials, parts and products require a unique part number to differentiate them from "non-low-halogen" versions
- 5. Suppliers must submit a Part Change Notice (PCN) identifying alternate materials
- 6. Supplier must complete and provide a Lenovo Supplier Material Declaration showing Br and Cl < 900 ppm by weight in any Printed Circuit Board laminates; Br in BFRs < 1000 ppm, Cl in CFRs < 1000 ppm, Cl in PVC < 1000 ppm in homogenous material for other components and materials.
- 7. Supplier shall provide Lenovo a **Test Report** from a qualified, independent laboratory upon request
- 8. Reactive TBBPA for printed circuit boards is exempt, until acceptable alternative materials are identified
- 9. Substitute flame retardant and PVC materials shall meet "low halogen" requirements and shall not contain red phosphorous or antimony compounds as a rule. Red phosphorous in plastic parts such as case parts is exempted.

#### Exemptions:

Reactive TBBPA for printed circuit boards until acceptable alternative materials are identified. Server and Third-party option products.

Parts for standard, "non-low-halogen" products are exempt .

Low halogen power cord is available as an option upon customer's requirements. The term of "Low Halogen" must appear on the label of low halogen power cord as shown in the example below.

### 2.1.4 Additional Requirements for "Children's" Products

Any product that will be marketed to K-12 schools or other education customers, or which otherwise might be used by children, must meet children's product requirements for the geographies in which it will be sold. These include, but are not limited to, the following substance restrictions which are in addition to the other restrictions and limits outlined in this specification.

#### **Children's Product Requirements:**

- Ensure CPSIA testing conducted by approved third party lab and include test report in PCRB.
  - Testing/analysis must include leads and phthalates.
  - Power cords and AC adapters sourced from all suppliers must also be tested.
- Paint must be under CPSIA limits (see Table 1)
- Cables and other accessible parts must have less than 90 ppm lead
- Must not contain Bisphenol A (BPA) (see Table 3) nor p-nonylphenol
- No mercury lighting or other use of mercury

#### 2.2 Supplier Full Material Disclosure Declarations

Suppliers must declare the presence of certain of substances in its Lenovo hardware Products to meet regulatory reporting requirements and customer requirements for Product content disclosures.. Lenovo's Supplier Material Declaration process and template is available on-line at www.lenovo.com – About Lenovo – Global Procurement – Product Content Restrictions.

#### **Lenovo's Requirements for Suppliers:**

All materials, parts and products incorporated into Lenovo products or bundled with Lenovo products as part of a delivered solution are required to meet the requirements of applicable laws and regulations, Lenovo's Specification 41A7731 Baseline Environmental Requirements for Materials, Parts and Products and Lenovo RoHS Specification 41A7733.

Suppliers are expected to complete and return an IPC 1752A XML Full Material Disclosure (FMD) via the Green Data Exchange (GDX), refer to <u>Lenovo Guide to Full Material Disclosures (Version 2)</u>.

At Lenovo's request, the supplier must be able to provide technical documentation in the form of internal design controls, supplier declarations, or analytical test data.

#### Additional requirements for EPEAT products:

Desktop, notebook, workstation and computer monitor products designated to be registered under the Electronic Products Environmental Assessment Tool (EPEAT) require additional Supplier Verification information shown in the Lenovo Supplier Declaration. EPEAT is a procurement tool designed to help large volume purchasers evaluate, compare and select desktop computers, laptops and monitors based upon their environmental attributes as specified in the IEEE Standard for the Assessment of Personal Computer Products (1680). The registration criteria and list of registered products are provided at <a href="https://www.epeat.net">www.epeat.net</a>.

Substances in **Table 3** are included in industry standardized product content declarations for electronic products, or other regulatory or Lenovo requirements. Lenovo requires that these

substances be quantified and reported by suppliers if they are present in a supplier's product at concentrations greater than the specified thresholds per **Table 3** in any individual Part in the item supplied to Lenovo. For example, if the item supplied to Lenovo is a power supply, then the substances in **Table 3** should be reported to Lenovo if they occur above the specified thresholds in any of the individual Parts (e.g., fan, circuit board, fasteners, connectors) of the power supply.

If the supplier determines that substances in **Table 3** are present in any Parts of the Product above their respective specified thresholds, **then the absolute weight in grams of the substance present in the Part supplied to Lenovo shall be reported to Lenovo**. Absolute weights, rather than weight percentages or ppm, shall be reported to allow aggregation of the data with that from other Parts that comprise the final Lenovo Product.

Table 3.	Reportable Substances	
Reportable Substance	Threshold for reporting in non-restricted	Examples of Industry Uses / Comments
Antimony/Antimony Compounds (Annex R)	applications* 1000 ppm (0.1%)	<ul><li>Solder alloy</li><li>CRT glass</li></ul>
Antimony trioxide (CAS 1309-64-4)	1000 ppm (0.1%) in a homogeneous material	<ul> <li>Flame retardant, e.g., in plastic housings and chip encapsulant. Often used in combination with brominated flame retardants.</li> <li>Opacifying agent for glass, ceramics and enamels</li> <li>Pigments</li> <li>Catalyst for polyethylene terephthalate and vulcanization of rubber</li> </ul>
Arsenic/Arsenic Compounds (Annex S)	1000 ppm (0.1%)	Dopant in semiconductor manufacture     Gallium arsenide is used as semiconductor substrate
Arsenic pentoxide (CAS 1303-28-2)	1000 ppm (0.1%) in a homogeneous material	Solution in the manufacturing of metal adhesives, wood preservatives, and in printing and dyeing.
Beryllium metal (CAS 7440-41-7)	1000 ppm (0.1%) in a homogeneous Material  EPEAT Products: 1000 ppm (0.1%) in a homogeneous Material	<ul> <li>Heat transport and heat sinking applications, gears, and cogs</li> <li>EPEAT 4.1.4.1 - ((IEEE STD 1680.1-2018)</li> </ul>

N,N'-mixed phenyl and tolyl derivatives of 1,4- benzenediamine (CAS 68953-84-4)	1000 ppm (0.1% by mass) in Deliverables	Additive in rubber.
Nonylphenols (Annex GG)	1000 ppm (0.1%) in a homogeneous material	<ul> <li>Lubrication oil additive</li> <li>Emulsifier</li> <li>Wetting and dispersing agent</li> <li>Antistatic agent</li> <li>Demulsifier and solubiliser</li> </ul>
Pentachlorothiophenol (PCTP) (CAS 133–49–3)	1000 ppm (0.1% by mass) in Deliverables	Used in the manufacture of rubber compounds.
Perchlorates (Annex HH)	6ppb in a material	Coin cell batteries     Acoustic foam
Perfluoro carboxylic acid and related compounds (PFCAs) for a list of PFCA CAS numbers see OECD Annex 4 at http://search.oecd.org/officialdocuments/disp laydocumentpdf/?cote=env/jm/mono%28200 6%2915&doclanguage=en	1000 ppm (0.1% by mass) in Deliverables	<ul> <li>Water, oil and grease repellant</li> <li>Surfactant</li> <li>Spreading/ wetting agent.</li> </ul>
Perfluoroalkyl sulfonates (PFASs) (for a list of PFAS CAS numbers see OECD at <a href="http://search.oecd.org/officialdocuments/disp">http://search.oecd.org/officialdocuments/disp</a> laydocumentpdf/?cote=env/jm/mono%28200 6%2915&doclanguage=en	1000 ppm (0.1% by mass) in Deliverables	<ul> <li>Semiconductor applications</li> <li>Flame retardant in resins</li> </ul>
Perfluorooctanoic acid (PFOA) and its salts (Annex II and for a more extensive list of PFOA CAS numbers see OECD at <a href="http://search.oecd.org/officialdocuments/disp">http://search.oecd.org/officialdocuments/disp</a> laydocumentpdf/?cote=env/jm/mono%28200 6%2915&doclanguage=en)	1000 ppm (0.1% by mass) in Deliverables	Semiconductor applications
Praseodymium (CAS 7440-10-0) and compounds	1000 ppm (0.1%) in a homogeneous material	Hard disk drives, lasers, violet color in glass and ceramics, ceramic capacitors, magnets and any application
Phthalates (Annex X)	1000 ppm (0.1%)	<ul> <li>Plasticizer in plastics         (e.g., PVC)</li> <li>PVC electrical cables</li> <li>Solder paste</li> <li>Sealants, varnishes, paper coating, inks, resins and adhesives.</li> </ul>
PIP (3:1) - phenol, isopropylated phosphate (3:1), also known as tris(4-isopropylphenyl) phosphate (CAS 68937–41–7)	1000 ppm (0.1%) in a homogeneous material	<ul> <li>Flame retardant,         plasticizer, and an         anticompressibility and         anti-wear additive.</li> <li>Used in lubricants and         hydraulic fluids.</li> </ul>
Plant based materials	Includes wood and paper based materials excluding paper used in publications and packaging and corn/soy based plastics and rubbers. Import of	US Lacey Act

Polycyclic aromatic hydrocarbons (PAHs) (e.g., phenanthrene CAS 85-01-8) (Annex LL) Please note this substance grouping has prohibited applications listed in Table 1. This entry is for reporting of all other non-restricted applications or levels below the restricted amount	plant based materials into US requires special declaration. Notify Lenovo if and wood or paper materials are used (except in publications and packaging).  1000 ppm (0.1%) in a homogeneous material	Dyes, plastics, coal tars, and creosote.
Polyvinyl chloride (PVC) (Annex Y)	1000 ppm by weight in homogenous material  See Table 2 in 2.1.3 Additional Requirements for "Low Halogen" Products.	<ul> <li>Plastic</li> <li>Insulator</li> <li>Windows on cell phones</li> <li>Housings for IT equipment</li> <li>Electrical cables</li> <li>Flexible CD jackets</li> </ul>
Radioactive Substances (Annex Z)	Any Intentional Addition	<ul> <li>Promethium 147 as an over-voltage device</li> <li>Measuring devices</li> <li>Gauges</li> <li>Detectors</li> <li>Optical properties (e.g., thorium)</li> </ul>
Refractory Ceramic Fibres; Special Purpose Fibres, [Manmade vitreous (silicate) fibres with random orientation with alkaline oxide and alkali earth oxide (Na2O+K2O+CaO+MgO+ BaO)	Content less or equal to 18 % by weight	<ul> <li>Insulation material in high temperature applications</li> </ul>
Selenium/Selenium Compounds (Annex AA)	1000 ppm (0.1%)	<ul> <li>diodes and light detectors (lead selenide)</li> <li>Historically used as photoelectric coating</li> </ul>
Terbium (CAS 7440-27-9) and compounds	1000 ppm (0.1%) in a homogeneous material	Hard disk drives, lasers, green phosphors, and magnets
Tetrabromobisphenol A (CAS 79-94-7)	1000 ppm (0.1%) in a homogeneous material	<ul> <li>Flame retardant</li> <li>Epoxy resins in printed circuit boards</li> </ul>
Tetrabutyltin (TTBT) (CAS 1461-25-2)	1000 ppm (0.1%) in a homogeneous material	Stabilizer for PVC
Toluene (CAS 108-88-3)	1000 ppm (Please note that in Table 1 toluene is prohibited as a Substance or constituent of Preparations in concentrations equal to or greater than 0.1% by mass in adhesives and spray paints.)	<ul> <li>Adhesive</li> <li>Paints/varnishes</li> <li>Coatings</li> <li>Silicon sealants</li> </ul>

Toluene Diisocyanates (see Annex KK for all inclusive list of CAS numbers)	1000 ppm (0.1%) in a homogeneous material	Chemical intermediate in the production of polyurethane
Tributyltin (TBT) and tributyltin compounds (Annex BB)	Any Intentional Addition in chemical products	<ul> <li>Antibacterial and antifungal agents, antifoulant</li> <li>Paint, pigment, and stabilizer</li> </ul>
1, 2, 3-Trichlorobenzene (CAS 87-61-6)	1000 ppm (0.1%) in a homogeneous material	<ul><li>Solvent</li><li>Dye carrier</li><li>Heat transfer medium</li></ul>
1, 2, 4-Trichlorobenzene (CAS 120-82-1)	1000 ppm (0.1%) in a homogeneous material	<ul> <li>Solvent</li> <li>Dielectric fluid</li> <li>Dye carrier</li> <li>Synthetic transformer oil Lubricant</li> <li>Heat transfer medium</li> <li>Wood preservatives</li> </ul>
Triphenyltin (TPT) and triphenyltin compounds (Annex BB)	Any Intentional Addition in chemical products	<ul> <li>Antiseptic and antifungal agent</li> <li>Paint, pigment, and stabilizer</li> </ul>
Tris (2-chloroethyl) phosphate (TCEP) (CAS 115-96-8)	1000 ppm (0.1%) in a homogeneous material	Flame retardant, plasticizer, and viscosity regulator in polyurethane, polyester resins, polyacrylates, polyvinyl chloride, cellulose derivatives, and thermoplastic resins. Also in adhesives, paints, varnishes, and epoxy.
Tris (2-chloro-1-methylethyl) phosphate (TCPP) (CAS 13674-84-5)	1000 ppm (0.1%) in a homogeneous material	Flame retardant, e.g.,     for polyurethane
Tris (2, 3-dibromopropyl) phosphate (CAS 126-72-7)	1000 ppm (0.1%) in a homogeneous material	<ul> <li>Flame retardant, e.g., synthetic textiles and plastics</li> <li>Phenolic resins</li> <li>Paints, paper coatings, and rubber</li> </ul>
Tris (1,3-dichloro-2-propyl) phosphate (TDCPP) (CAS 13674-87-8)	1000 ppm (0.1%) in a homogeneous material	Flame retardant, e.g., in textiles and polyurethane foam.
2,4,6-tris(tert-butyl)phenol (2,4,6-TTBP) (CAS 732–26–3)	1000 ppm (0.1%) in a homogeneous material	Antioxidant that can be used as a fuel additive or lubricant additive
Vinyl chloride (CAS 75-01-4)	1000 ppm (0.1%) in a homogeneous material	Chemical intermediate used in production of polyvinyl chloride

<sup>\*</sup> Restricted applications are defined in **Table 1**.

<sup>\*\*</sup> Mercury is only permitted in lamps. The threshold for mercury reporting reflects regulations cited in **Table 1** which are currently more stringent than RoHS maximum concentration limits.

# **2.2.1.** Substances of Very High Concern (SVHC) in Articles - Reporting Requirements

Lenovo requires suppliers to identify if any Substances of Very High Concern (SVHC) present in an Article (Deliverable) at or above the 0.1% weight by weight (w/w) concentration and report the name and CAS number of the SVHC candidate and the quantity on the Supplier Material Declaration (IPC-1752A form) for the Deliverable. See **Annex DD** for a list of SVHC which must be reported on the Supplier Material Declaration. The table in this annex has a list of SVHC Candidate substances which may potentially be present in Information Technology (IT) equipment.

The current candidate list of REACH SVHC as published by the European Chemicals Agency is located at:

#### Http://echa.europa.eu/chem\_data/candidate\_list\_table\_en.asp

Annex DD in this specification has the list of 209 SVHC Candidate Substances as of the date of this document. Please check the web site for updates since this list is subject to change. Annex EE is the list of 69 unique substances/entries subject to REACH Authorization (current as of the date of this specification) and which are prohibited at or above 0.1% weight by weight of a Deliverable.

If an SVHC is present in a Article at or above the reporting concentrations, the Supplier must provide a customer communication to Lenovo meeting the requirements of Article 33 of the EU REACH Regulation.

EU REACH Regulation Number 1907/2006 can be found at http://reach.jrc.it/legislation\_en.htm

The EU provides guidance documents for REACH, specifically guidance documents for Substances in Articles as well as the candidate list for SVHC at <a href="https://echa.europa.eu/guidance-documents/guidance-on-reach">https://echa.europa.eu/guidance-documents/guidance-on-reach</a>
Additional information about REACH can be found at the European Chemicals Agency web site at <a href="http://echa.europa.eu/">http://echa.europa.eu/</a>

### 2.3 Marking of Hardware Plastic Parts

Hardware plastic Parts molded and/or fabricated from thermoplastic materials and weighing 25 grams or more must be marked in accordance with the International Organization for Standardization's international standard ISO 11469:2016 "Plastics- Generic identification and marking of plastics products." The marking convention of ISO 11469 is outlined in the following sections. Marking is optional for Parts weighing less than 25 grams, however, all Parts having adequate surface area for coding should be marked. **Marking requirements do not apply to cable and cable assemblies or experimental tooling.** The marking of protective packaging materials is not in the scope of this specification.

#### 2.3.1 Coding Method

The marking shall be made by injection molding, stamping, or other means of permanently affixing the information in a readily visible area on non-decorative or nonfunctional surfaces.

Marking in a readily visible area means that the marking can be seen on the disassembled plastic

Parts. Use of labels with adhesives for coding Parts is not allowed.

#### **Notes:**

- 1. When two or more resins may be used for production of a Part, identification of the actual resin used for fabrication is required.
- 2. If the Parts must be plated or painted on the internal surface, it may not be possible to have a readily visible injection molded-in marking. In such cases, it may be necessary to code the Parts with a stamp or other means of permanently affixing the information. If the Parts must be painted with a decorative paint, it must be indicated on the internal surface with an appropriate means (for example, stamp) that the Part has been painted.

#### 2.3.2 Symbol to Signify Recyclability

To indicate that the plastic Material used for the fabrication of the Part is recyclable, the two symbols ">" and " <" (normally used to indicate *greater than* and *less than*) will be used. These symbols are shown in **Section 2.3.3**. Marking with these symbols indicates that the Part Material is recyclable. **Note:** The size of the symbol is optional as long as it is clearly legible.

#### 2.3.3 Resin Generic Identification

Resin identification will be marked on Parts using the symbol for polymer type in between the symbols > and < as shown in the example of polycarbonate/ABS blend below.

#### > PC+ABS <

The symbols for the plastic Materials shall be selected from Part 1 of international standard ISO 1043, *Plastics-Symbols and abbreviated terms*. Symbols of plastics not appearing in ISO 1043-1 shall be selected from ASTM D 4000, *Classification System for Specifying Plastic Materials*; and ASTM D 1600, *Terminology Relating to Abbreviations, Acronyms and Codes for Terms Relating to Plastics*. See **Table 5** "Commonly Used Resins" for typical examples.

Table 5.	ommonly Used Resins
Generic Family Name	Polymer Symbol
Polyamide	PA
Polycarbonate	PC
Poly(phenylene ether)	PPE
Polymethylmethacrylate	PMMA
Polystyrene	PS
Polyvinyl chloride	PVC
Acrylonitrile/Butadiene/Styrene	ABS
Polycarbonate + Acrylonitrile/Butadiene/Styren	ne PC +ABS
Polycarbonate with 10% glass fiber	PC - GF10

When two or more resins may be used for production of a Part, identification of the actual resin used

for fabrication can be displayed by arrows. See **Table 6** for examples.

Table 6. Examples of Completed Plastic Part Markings	
<b>Example</b> Marking	
Single material used in production of Part	> ABS-FR(17) <
Two or more generically different materials allowed for	Arrow points to actual material used in production.
production of Part	$>$ ABS-FR(17) $<$ $\rightarrow$ $>$ PC + ABS-FR(40) $<$

### 2.3.4 Additives Generic Identification

Additives identification shall be marked on Parts using the generic symbols from the series of international standards ISO 1043-2, 1043-3 and 1043-4. For example, a blend of polycarbonate/ABS with halogen-free organic phosphate flame retardant compounds is marked with the following code:

$$>$$
 PC+ABS-FR(40)  $<$ 

### 2.4 Additional Requirements for Batteries

#### **2.4.1 Battery Content Restrictions**

**Table 6** "Restrictions on Content of Batteries" lists restrictions on content of batteries sold by Lenovo. Also, all batteries contained in Parts or Products covered by this specification shall meet the requirements of **Table 7.** 

Table 7. Restrictions on Content of Batteries		
Battery Type	Restrictions	
All Battery Types	<ul> <li>No intentionally-introduced mercury</li> <li>≤ 0.0005% mercury by weight. <sup>1,5,11,13,15</sup></li> <li>0.001% cadmium by weight (Note the lower cadmium restrictions for some battery types below)<sup>1</sup></li> <li>Only battery types which are exempted from all hazardous materials transport regulations (surface and air), i.e., not classified as a hazardous material (for purposes of transport) or dangerous good, can be used.</li> </ul>	
Nonremovable batteries or accumulators, unless the battery is nonremovable due to user safety or other principal purpose.	<ul> <li>≤ 0.0005% cadmium by weight <sup>5</sup></li> <li>≤ 0.1% lead by weight <sup>5</sup></li> <li>≤ 0.0005% mercury by weight <sup>5</sup></li> </ul>	
Alkaline batteries	<ul> <li>0.200% lead by weight <sup>16</sup></li> <li>0.001% cadmium by weight <sup>16</sup></li> <li>0.0001% mercury by weight <sup>16</sup></li> </ul>	
Alkaline zinc manganese dioxide	<ul> <li>≤ 0.001% cadmium by weight<sup>4, 6</sup></li> <li>0.004% lead by weight <sup>2, 6, 9</sup></li> <li>0.0001% mercury by weight <sup>2, 6, 9</sup></li> </ul>	
Alkaline manganese button cell battery with mercury added	Prohibited <sup>7</sup>	
Button Cell Batteries	<ul> <li>≤ 0.0005% cadmium by weight</li> <li>must not exceed 25 mg mercury per battery (until December 31, 2015)</li> </ul>	

	• ≤ 0.0005% mercury by weight in homogeneous	
	materials (beginning January 1, 2016)	
Lead Acid (Pb), Sealed	Must be classified as non-spillable and meet the	
	requirements of US Code of Federal Regulation, 49 CFR	
	173.159a and IATA Special Provision A67.	
Mercuric oxide button cell battery	Prohibited <sup>7</sup>	
Nickel Cadmium (Ni-Cd)	Restricted to applications where no technically feasible	
	alternative exists. Use requires written approval of a	
	Lenovo procurement representative unless battery(ies)	
	have been specified by an Lenovo print or specification.*	
Nickel Metal Hydride (Ni-MH)	≤ 0.025% cadmium by weight	
Silver oxide mercury added button cell batteries,	Prohibited <sup>7</sup>	
including silver oxide button cell batteries designated		
SR357, SR364, R371, SR377 and SR395		
Zinc-air button cell battery with mercury added	Prohibited <sup>7,8</sup>	
Zinc Carbon Batteries sizes R6, R14, R20	• $\leq 0.200\%$ lead by weight <sup>2</sup>	
	• $\leq 0.001\%$ cadmium by weight <sup>4, 16</sup> (R6, R14 and	
	R20)	
	• $\leq 0.0001\%$ mercury by weight <sup>3</sup>	
Zinc silver oxide, zinc air and zinc	Prohibited <sup>12</sup>	
manganese dioxide button batteries	• $\leq 0.005\%$ mg/g mercury <sup>10</sup>	
Non-alkaline zinc manganese dioxide	• ≤ 0.001% cadmium by weight <sup>4, 6, 9</sup>	
	• $\leq 0.100\%$ lead by weight <sup>2, 6</sup>	
	• $\leq 0.0005\%$ mercury by weight <sup>2, 6</sup>	
	·	

Note - the regulations cited below are only a sample of the regulations pertaining to batteries. They are provided for example purposes only.

- 1) EU Directive 2006/66/EC of the European Parliament and of the Council of 6 September 2006 on batteries and accumulators and waste batteries and accumulators.
- 2) Argentina National Legislature Act 26.184 on the manufacturing, assembly and importing of batteries.
- 3) New York Battery Reduction and Elimination. New York State Consolidated Laws. Environmental Conservation
- 4) Austrian Battery Ordinances 514/1990, as amended by BGB1 No. 3/1991(4 January, 1991) and BGB1.II Nol. 495/1999 (28 December 1999) of the Ordinance of Federal Ministry for Environment, Youth and Family.
- 5) Switzerland Ordinance on Risk Reduction related to the Use of certain particularly dangerous Substances, Preparations and Articles.
- 6) Brazil Resolution Number 401 of November 4, 2008 Batteries.
- 7) Maine Act Concerning Mercury-added Button Cell Batteries.
- 8) 2011 Wisconsin Act 201 relating to zinc air button cell batteries
- 9) GB 24427-2009 Limitation of mercury, cadmium and lead contents for alkaline and non-alkaline zinc manganese dioxide batteries. National Standards of the People's Republic of China
- 10) GB 24428-2009 Limitation of mercury contents for zinc silver oxide, zinc air and zinc manganese dioxide button batteries. National Standards of the People's Republic of China
- 11) Canada Products Containing Mercury Regulations SOR/2014-254
- 12) Japan Act on Preventing Environmental Pollution of Mercury
- 13) Ecuador Technical Regulations RTE INEN 105 (1R) Cells and Batteries, Primary and Secondary
- 14) Columbia Decree 2133-2016 Control measures for the importation and commercialization of mercury and the products that contain it
- 15) EU Regulation 2017/852 of 17 May 2017 on mercury
- 16) Columbia Resolution Number 0172 Technical Regulation No 0172 of January 23, 2012.

#### 2.4.2 Product Design and Labeling Requirements for Batteries

All batteries contained in Parts and Products covered by this specification shall be designed for easy identification and removal. Batteries must be classified as nonhazardous (for purposes of transport) by all modes of transport as required and data (safety data sheets for all batteries, plus UN38.3 test reports for lithium batteries) used to classify batteries as nonhazardous in transport must be supplied to Lenovo upon request. For further information on this, please contact the Lenovo Hazardous Materials Transportation Coordinator.

Suppliers of Deliverables with lead acid batteries must provide Lenovo with a Material Safety Data Sheet (MSDS) which is current, e.g., less than 3 years old, and conforms to US Occupational Safety and Health Administration requirements in 29 Code of Federal Register 1910. A copy of this MSDS must accompany lead acid batteries which ship to a Lenovo customer, including end use customers, Business Partners, and OEM customers. The MSDS must also be available upon request in Spanish.

All Non-Spillable Wet Batteries purchased for use in Lenovo or non-Lenovo equipment must be non-regulated for shipment per IATA Special Provision A67; 49 CFR 173.159 (d); and all other application transportation regulations. The battery and external package must be marked "NONSPILLABLE" or "NONSPILLABLE BATTERY" according to 49 CFR 173.159 (d) (2). All Lithium Batteries purchased for use in Lenovo or non-Lenovo equipment must be non-regulated for shipment per IATA Special Provision A45; 49 CFR 173.185 (b) or (c); and all other applicable transportation regulations. Bulk shipments of Lithium cells or batteries must be in quantities of 12 or less and have a gross package weight of 5 kg or less for all field use shipments. This requirement does not apply to Lithium battery or cell shipments used to support manufacturing operations as long as all transportation regulations are met.

**IMPORTANT:** The U.S. Department of Transportation (USDOT) prohibits the shipment of primary (non-rechargeable) lithium batteries and cells on passenger aircraft for both foreign and domestic passenger-carrying aircraft entering, leaving, or operating in the United States according to 49 CFR 172.102 Special Provision A100. In addition, the package must also be marked "PRIMARY LITHIUM BATTERIES - FORBIDDEN FOR TRANSPORT ABOARD PASSENGER AIRCRAFT" when transported by highway, rail, vessel and cargo aircraft in the U.S. Per 49 CFR 173.185 (b)(5) or (c)(4). Secondary (rechargeable) lithium batteries and cells are only permitted on passenger aircraft for both foreign and domestic passenger-carrying aircraft entering, leaving, or operating in the United States with a gross package weight not exceeding 5 kg according to 49 CFR 172.102 Special Provision A100.

Documentation from the manufacturer/supplier of the battery must be provided to Lenovo clearly stating that the part number being purchased by Lenovo meets all the requirements which make the battery non-hazardous for shipment by IATA, 49 CFR, and any other applicable regulation such as ADR, IMDG, TDG, etc. Data (industry test reports) used to classify batteries as non-hazardous in transport must be supplied upon request.

All rechargeable primary batteries must be labeled with a reference to Lenovo's website for further information on recycling. For example, the label may read: "Please see

<u>www.lenovo.com/lenovo/environment</u> for more information about recycling options in your area." Variations on this label require Lenovo GEA approval.

Batteries shall have appropriate labels affixed, including but not limited to

- 1. Battery type and chemistry (IEC standard name is acceptable for button cells, e.g., CR2032, BR1225, see IEC 60086-2),
- 2. Manufacturer name,
- 3. Capacity rating on all batteries with the exception of coin cell
  - a. All batteries must, at a minimum, have the capacity displayed in Ah on a label with a minimum size of 1 mm x 5 mm,
  - b. Lithium ion batteries also require the specific marking format of Wh, and
- 4. Other markings, hazard warnings, and information as required by applicable laws and regulations.

Battery labels or markings must be printed visibly, legibly and indelibly. The battery marking shall be located on or adjacent to each battery unless otherwise noted in this Section. Deliverables containing batteries that are not readily identifiable must be clearly labeled on the exterior to indicate the presence of a battery inside. In battery packs, individual cells may be labeled (in cases where multiple manufacturers or chemistries cannot clearly be identified using a single label for the pack) or one label may be used for the pack.

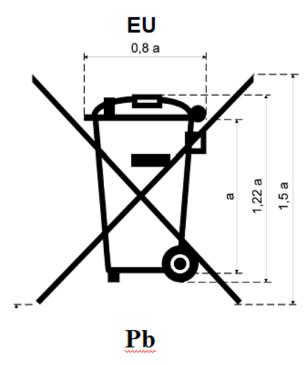

If a label design is specified by Lenovo in a Part print, drawing or assembly specification, the specified label on the print or assembly specification must be affixed. In the absence of a battery label specified by Lenovo in a Part print, the supplier shall refer to country requirements. For reference, the following **Sections 2.4.2.1 - 2.4.2.5** summarize battery marking requirements for selected geographies.

**2.4.2.1 Marking Requirements for the EU, Brazil, Turkey, and other jurisdictions** Instructions must be provided in the Product or Part hardware publications, showing how batteries can be removed safely and informing the customer of the type of battery in the Deliverable.

In the European Union, a mark indicating separate collection must be printed on all batteries or accumulators. See **Figure 1**. The mark must (1) consist of a crossed-out wheeled bin container; (2) cover 3% of battery or accumulator's largest side area, and be of a maximum size of 5 cm x 5 cm; (3) for cylindrical cells, cover 3% of half the surface area of battery or accumulator, and maximum size of 5 cm x 5 cm; and (4) where the mark would be smaller than 0.5 cm x 0.5 cm, a separate mark measuring at least 1 cm x 1 cm must be printed on the package.

In addition, batteries and accumulators containing heavy metals must be marked with specific symbols for heavy metal content: Hg for mercury content greater than 0.005% mercury; Cd for cadmium content greater than 0.002% cadmium; Pb for lead content greater than 0.004% lead. These symbols must be printed beneath the separate collection mark and must be at least 1/4 of the size of the separate collection mark.

**Figure 1.** Collection mark and heavy metal content marking for a battery containing lead.

The capacity rating must be labeled on all portable batteries. Portable battery is defined by the EU Directive 2006/66/EC on batteries and accumulators to mean any battery, button cell, battery pack or accumulator that is sealed, can be hand carried, and is neither an industrial battery or accumulator nor an automotive battery or accumulator. Capacity rating (e.g., Watt-hour, Wh) for button or coin cell batteries may be located on the packaging if space is not available on the battery.

#### 2.4.2.2 Labeling Requirements for the United States

#### 2.4.2.2.1 Requirements for Rechargeable Ni-Cd and Small Sealed Lead Acid Batteries

In the United States, the Mercury-Containing and Rechargeable Battery Management Act (Public Law 104-142) establishes national, uniform labeling requirements for rechargeable Ni-Cd, small sealed lead acid batteries, and products containing these regulated batteries as a primary energy supply. Products that include an internal uninterrupted power supply (UPS) device are exempt. Regulated batteries must display three chasing arrows or a comparable recycling symbol and the text indicated in **Table 8** for the respective regulated items. No size or color requirements for the recycling symbol are specified in the regulation. EPA publication EPA530-K-97-009, "Implementation of the Mercury-Containing and Rechargeable Battery Management Act" depicts the three chasing arrows symbol shown in **Figure 2**.

**Figure 2.** Three chasing arrows symbol as cited by the U.S. EPA for the U.S. Battery Act

The required labeling must appear on the packaging of the Products containing regulated batteries that are not easily removable, and on the packaging of regulated batteries that are sold separately from such Products, if the labeling on the Product or battery is not visible through the packaging.

Table 8. Texts for Batte	ery Marking for the U.S. Battery Act
Regulated Item	Text
Nickel-cadmium batteries*	Nickel-cadmium or Ni-Cd with the phrase
	BATTERY MUST BE RECYCLED OR
	DISPOSED OF PROPERLY
Lead acid batteries	Pb or the words "LEAD," "RETURN," and
	"RECYCLE", and if the batteries are sealed, the
	phrase "BATTERY MUST BE RECYCLED."
Products containing regulated lead-acid	"CONTAINS SEALED LEAD BATTERY.
batteries that are not easily removable	BATTERY MUST BE RECYCLED."
Product containing Ni-Cd batteries that	"CONTAINS NICKEL-CADMIUM BATTERY.
are not easily removable	BATTERY MUST BE RECYCLED OR
	DISPOSED OF PROPERLY."

<sup>\*</sup> Unless specifically called out on an Lenovo print or specification, nickel cadmium batteries may not be used in Parts and Products covered by this specification.

### 2.4.2.2.2 Requirements for Rechargeable Lithium Ion Batteries Sold in US and Canada

Lenovo is a licensee of the Rechargeable Battery Recycling Corporation (RBRC) for rechargeable lithium ion batteries sold in the US and Canada. As part of this program, all Lenovo rechargeable lithium ion batteries offered for sale in the US and Canada must bear the Rechargeable Battery Recycling Corporation (RBRC) seal (**Figure 3**). This requirement applies to rechargeable lithium ion batteries that will be included in products as well as batteries that will be sold as stand alone parts or replacements.

The seal must be placed on the battery itself. It should also be placed on battery packaging, in user manuals, and in informational materials wherever possible. The seal must be at least 13mm in diameter and must have white space around the seal at least equal to the width of the outer ring of the seal. The seal must contain the RBRC toll free number (1-800-822-8837), the word "RECYCLE," and the battery chemistry as illustrated in **Figure 3** below.

US & Canada Only US & Canada Only

**Figure 3.** RBRC seals for rechargeable lithium ion batteries (color or black and white).

Lenovo requires the additional text "US & Canada Only" to appear below the seal when Products are sold outside the US or Canada. The size of the lettering "US & Canada Only" shall have a minimum text height of 2mm. Helvetica font, 8 or 10 points is recommended. Text is to be centered under the seal but must not touch the seal.

#### 2.4.2.2.3 Requirements for Batteries Containing Perchlorate

Many manganese dioxide lithium coin cell batteries used in Lenovo applications such as desktop and laptop computers contain perchlorate. The use of any material, part, or product containing perchlorate triggers specific labeling and notification requirements in the US. California's Perchlorate Contamination Prevention Act requires that all perchlorate containing materials and products containing perchlorate be labeled with or accompanied by the following statement:

Perchlorate Material - special handling may apply, See <a href="www.dtsc.ca.gov/hazardouswaste/perchlorate">www.dtsc.ca.gov/hazardouswaste/perchlorate</a>

The statement must appear on either (1) a label conspicuously applied to the exterior of all outer shipping packages and on consumer packages or (2) the statement may be included on a document included with the shipment such as an owners manual or package insert. The above statement must be used verbatim and must accompany every Lenovo part or product containing perchlorate that will be shipped in the US.

#### 2.4.2.3 Requirements for Batteries Sold in China

The Regulation on Mercury Content Limitation for Batteries requires all domestically manufactured and imported alkaline batteries sold in China to be marked to indicate mercury content using Chinese characters equivalent to "low mercury" (if the mercury content is less than 0.025% of the weight of the battery) or "mercury free" (if the mercury content is less than 0.0001% of the weight of the battery).

#### 2.4.2.4 Additional Requirements for Taiwan

All batteries sold in Taiwan are required to have the "Four-in-One" recycling symbol. See **Figure 4**. The "Four-in-One" recycling symbol must be printed in any solid color (monotone), must be square in shape with each side not smaller than 0.5 cm in packaging and 1.5 cm in user manuals and product literature. The recycle symbol should be placed on the battery.

Figure 4. Four-in-One recycling symbol for Taiwan

Electronic products with embedded dry cells must be affixed with Four-in-One Recycling Symbol on the product packaging, product labels or instruction books. Nearby the Four-in-One Recycling Symbol, the Chinese characters for "Please Recycle Batteries" must be indicated. See Figure 4.1.

Figure 4.1 Four-in-One recycling symbol and words for Taiwan

#### 2.4.2.5 Requirements for Rechargeable Batteries Sold in Japan

Rechargeable sealed lead acid, nickel cadmium, nickel metal hydride, and lithium ion batteries sold inside Japan shall be labeled according to the Ordinance No. 95 of Ministry of Economy, Trade, and Industry under the Law for the Promotion of the Effective Utilization of Resources (Law No. 48, 1993 as amended, 2001). These requirements are summarized in the Tables and Forms below. Sealed lead acid batteries with greater than 234,000 coulombs charge and small coin type rechargeable batteries that are contained inside Products are exempted from the special Japanese labeling requirements of this section. Recommended background color of label is silver (PANTONE877C) or gray (PANTONE421C) for sealed lead acid, yellowish green (PANTONE389C) for sealed nickel-cadmium, orange (PANTONE1375C) for sealed nickel-hydrogen, and blue (PANTONE312C) for sealed lithium storage battery.

In case of Li-ion battery, it is recommended the following two digits be added. Indication of Li-ion battery: Li-ion XY Near the three arrow mark, indicating "X: the maximum amount of metal contained in the positive electrode" and "Y: the metals which disturb the recycling of main metals" with two numbers.

1st Number(X): Max. amount of metal contained in the positive electrode

- 0: Cobalt
- 1: Manganese
- 2: Nickel

2nd Number(Y): metals which disturb recycling main metals

- 0: None
- 1: In case the total "Tin(Sn)" content in the cell(s) is more than 1.0 wt% per battery pack weight
- 2: In case the total "Phosphorous(P)" content in the cell(s) is more than 0.5 wt% per battery pack weight

See **Figure 5** for detail specifications for symbol and battery type.

Table 9. Battery Label Requirements for Japan				
Class of the Specified Labeled Product				
Storage batteries not covered by using plastic or other materials and storage batteries covered by using plastic or other materials with height of less than 10mm	Battery type

with height of 10mm or more				
Sealed nickel-hydrogen storage batteries covered by using plastic or other materials				
with height of 10mm or more				
Sealed lithium storage batteries covered by using plastic or other materials with				
height of 10mm or more				

Figure 5. Chasing Arrows recycling symbol and Battery type for Japan

#### 2.4.2.6 Requirements for Alkaline Batteries Sold in Argentina, Colombia, Paraguay

Alkaline batteries are banned in Argentina, Colombia and Paraguay and should not be distributed there directly (factory) or indirectly (distribution center). For use of Alkaline batteries in other Latin America countries please check with Lenovo LA Global Environmental Affairs.

#### 2.4.2.7 Requirements for Brazil

Lead acid, nickel cadmium, mercury oxide, alkaline manganese, and zinc manganese batteries or accumulators shall be labeled in accordance to the requirements for the European Union, see previous section for the EU. In addition, these batteries must be clearly and indelibly labeled in Brazilian Portuguese with the following information:

• Identification of the importer and manufacturer,

- Warning about risks to human health and the environment, and
- Requirement to return the battery, after use, to the reseller, manufacturer, or importer.

If there is insufficient space on the batteries to put the above information then this information must be on the packaging and in the product manual shipped with products.

The manufacturer of these batteries must:

- Register in the Brazil Federal Technical Register of Activities that are Potentially Contaminating or that Use Environmental Resources.
- Test the batteries in accordance to Chapter 1, Section 3 of Brazil Resolution Number 401 of November 4, 2008 (and Article 3 of Brazil Normative Instruction (NI) No. 8) at an in-country (Brazil) INMETRO accredited laboratory. The testing results must be submitted annually to Lenovo, the Brazil National Institute of Metrology and Standards (INMETRO), and the Brazil Institute of the Environment and Renewable Natural Resources (IBAMS). Please note this testing requirement applies only to lead acid, zinc manganese and alkaline manganese batteries and accumulators only. (This testing also applies to nickel cadmium and mercury oxide batteries which are not allowed in Lenovo products.)
- Submit a battery management plan to the required Brazil environmental agency (IBAMA).
- Include in the packaging, in Brazilian Portuguese, information about the symbols, warnings on the risks to human health and the environment, and the necessity to return the battery after use to the reseller, manufacturer or importer.

### 2.5 Requirement for Decorative Metal Finishing

Powder coating is the preferred material for decorative metal finishing of Lenovo hardware products. This includes the finishing of decorative metal parts and OEM products. Exceptions to this requirement are applications where production volumes don't justify using the powder coating process; a unique color, texture, or "feel" (e.g., soft-touch) is specified; or conductive (e.g., electrostatic discharge (ESD), electromagnetic compatibility (EMC)) functional coatings are required. Powder coatings are not applicable, at this time, for the finishing of plastic parts. Contact your Lenovo procurement representative to identify the Lenovo approved powder coating supplier and qualified color matched materials for decorative metal finishing of Lenovo hardware products.

### 2.6 Requirements for Parts and Products Containing Mercury

While most mercury-containing components are prohibited from Lenovo hardware Products (see Table 1), mercury is allowed in energy efficient lamps. The use of a mercury-containing component must be reported to your Lenovo procurement representative to ensure that the applicable legal requirements are met for Products containing mercury. All Parts or Products containing mercury must be labeled in English and French per the requirements of Table 10 for certain U.S. State and Canadian laws. Appropriate text as defined in Table 10 must be added to user and service manuals (or instructions for projector replacement lamps) for mercury-added Products indicating which Product components contain mercury, directing the Product owner to dispose of the Product per local

regulations, proving safe handling procedures and measures to be taken in case of accidental breakage of the lamp; and a link to options available for recycling. Information must be in English and French in at least 10 point font or 3 mm in height or greater, and must be enclosed by a border. Product packaging for products with mercury added lamps that are easily removable by the consumer (such as projectors and projector replacement lamps) and packaging for all mercury containing replacement parts must also be labeled per the requirements of Table 10.

Please contact Lenovo Global Environmental Affairs for approval prior to releasing any products with mercury containing lamps other than notebook computers, all-in-one desktops, and displays as prior permit applications and notifications may need to be filed.

**Table 10** provides a list of those Lenovo Product categories that are known to contain mercury and provides exact requirements for label wording, label font size, and user manual text. Labels and manual text for Product categories not listed in **Table 10** must be reviewed and approved by your Lenovo procurement representative.

<sup>\*</sup> US Sales Webpage Requirements: The US sales webpage information for this product must include the statement "The fluorescent lamp in the liquid crystal display contains intentionally added mercury; dispose according to local, state or federal laws. Contains mercury / Contient du mercure."

For Canada, the following information is required in a readily visible location on the product and package:

- a) The statement "Contains mercury / Contient du mercure"
- b) Safe handling procedures and the measures to be taken in case of accidental breakage, the address of a website where that information is available, or contact information for a person who can provide that information;
- c) The options available for the disposal and recycling of the product in accordance with the laws of the jurisdiction where the disposal or recycling is to take place, the address of a website where that information is available, or contact information for a person who can provide that information;
- d) A statement that the product should be disposed of or recycled in accordance with the applicable laws; and
- e) Symbol "Hg" in a font size of at least 10 points with characters that are at least 3 mm in height or within a pictogram of a least 7 mm in height.

The above information for Canada, must be in both English and French Canadian; in a font size of at least 10 points with characters that are at least 3mm in height, that are legible and indelible and that are impressed, embossed or in a color that contrasts with the label's background or the color of the product; be enclosed by a border, and be easily distinguishable from other graphic material on the product or its package. See the Canada regulation for further details if the product or package is too small, or there is no package to accommodate the information. Annual reporting and a permit is required to import mercury containing products into Canada after November 7, 2015.

In some jurisdictions, at the point of sale of a Product containing mercury, notification must be given to the customer that the product contains mercury. Contact your Lenovo representative for more details or requirements.

### 2.7 Requirements for Chemicals

The following requirements apply to any

- Chemical used to maintain or service hardware Products. Examples include adhesives, cleaning solvents or solutions, lubricants, and paint
- Chemical contained in a Product or assembly which is not normally consumed but may require replacement of the chemical to maintain operation of Product or assembly. Examples include silicone grease for heat radiation sealing, refrigerants, lubricants, biocides, or corrosion inhibitors in a closed looped system.

The chemical's individual container or individual protective packaging must be labeled with:

- The chemical name as it appears on the associated Material Safety Data Sheet(s)
- The name and address of the appropriate chemical manufacturer, supplier or other responsible party, (in some cases, Lenovo may designate the responsible party) and
- Appropriate hazard warnings as applicable.

The label must be provided in English at a minimum. The label may also be required to have text in other languages and format as required by law or regulation in countries outside the U.S. The Supplier shall work with the Lenovo chemical representative through the Lenovo procurement representative to ensure proper labeling. In some cases, Lenovo may specify the label and its contents.

A Material Safety Data Sheet (MSDS) for the chemical must be supplied to the Lenovo procurement representative or other Lenovo designated representative. The MSDS must be provided in English at a minimum and comply with legal requirements for information content and format. The MSDS may be required in other languages and formats as required by law or regulation in countries outside the U.S. The supplier shall work with the appropriate Lenovo chemical representative through the Lenovo procurement representative to ensure proper format, information content, and translation requirements. In some cases, Lenovo may specify the language and format of an MSDS.

Chemical FUMs are materials stocked by Lenovo to support customers. Some examples include cleaners, adhesives, glues, paint, oils, alcohol, and chemicals in kits. Chemical FUMs must be packaged according to this specification including the following:

- a. They must be packaged in field use units (usually a unit of one) so that Lenovo can reship them in the same package.
- b. Under special circumstances, Lenovo Purchasing may permit the use of a single combination package that consolidates **multiple** inner containers inside a **single** outer container. Such

configurations may be acceptable due to the small physical package size, shipping quantity or other factors as defined by Lenovo. In this instance, only government approved third-party test laboratories are permitted to authorize and certify the UN specification package. Authorization to use a combination package, which consists of multiple inner packages in a single outer package, must be provided by Lenovo Purchasing in writing.

- c. A FUM containing liquids must use combination packagings, as single packaging is restricted by some airlines.
- d. Packaging, labeling and marking must be compliant with all transportation regulations where materials will be shipped (ie IATA / 49 CFR / ADR....). All FUM packaging, labeling and marking must be compliant with IATA regulations as purchased from the supplier no matter where it is intended to be shipped.
- e. The net quantity per package shall not exceed the standard maximum net quantity per package as allowed on "Passenger and Cargo Aircraft", as defined by IATA regulations. The net quantity per package is not required to meet IATA Limited Quantity requirements.

#### 2.8 Product Chemical Emissions

Chemical emissions analyses shall be performed on Products and supplies (e.g. toner), but are not necessary for Parts or subassemblies of Lenovo hardware Products. Products covered by this specification shall not emit chemicals during normal use conditions which exceed the threshold values or requirements listed in U.S. 29 CFR 1910 (tables Z 1-3) (see http://www.gpoaccess.gov/cfr/index.html) or the California Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65) (see <a href="http://www.calepa.ca.gov/">http://www.calepa.ca.gov/</a>). Product chemical emissions requirements are delineated in ECMA 328: Detection and Measurement of Chemical Emissions From Electronic Equipment (see <a href="http://www.ecma-international.org/">http://www.ecma-international.org/</a>).

### 2.9 WEEE Marking

#### 2.9.1 Affected Products and Jurisdictions

Electrical and electronic equipment (EEE) that is put on the market in the European Union after August 13, 2005, and that is listed in the category of IT and telecommunications products in Annex 1B3 of the EU Directive 2012/19/EU on Waste Electrical and Electronic Equipment (WEEE) is subject to the requirements for product markings in accordance with the Directive. In addition to the products specified in Annex 1B3 of the WEEE Directive, stand alone options that operate external to the products listed in Annex 1B3 (e.g., keyboards, monitors, mice, external drives) should also be marked. Components and internal parts of the stand alone equipment listed in Annex 1B3 do not need to be marked.

Lenovo requires the use of the WEEE markings on Products sold in non-EU countries to be qualified by adding the text "EU Only" below the solid bar as shown in **Figure 6**. Contact your Lenovo procurement representative to confirm the latest requirements for WEEE marking implementation for affected Products.

#### 2.9.2 WEEE Marking Elements

The marking of EEE to comply with the WEEE Directive requires all three of the following:

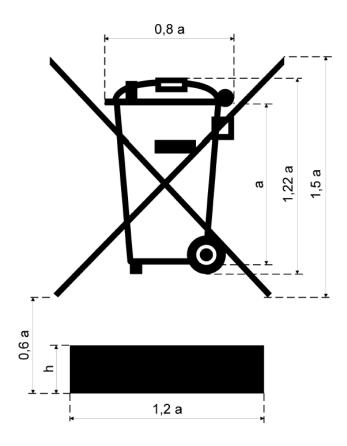

- 1) the crossed-out wheeled bin symbol in accordance with Annex IV of the WEEE Directive per Article 10(3). The symbol of the crossed-out wheeled bin is the same as required for the battery collection mark in the EU (see **Figure 1**).
- 2) a unique identification of the producer such as a brand name, trademark, company registration number or other suitable means recorded in EU member state's register of producers per Article 12(1) of the Directive and
- 3) the date of manufacture/put on the market.

European Standard EN 50419:2005 identifies three options for the indication of the date of manufacture/put on the market:

- A) Indicate the date of manufacture or date put on the market in un-coded text in accordance with EN 28601 (This European Standard is equivalent to ISO 8601) or other coded text, for which the code shall be made available for treatment facilities; or
- B) Use the solid bar symbol as shown in **Figure 6** below in conjunction with the crossed out wheeled bin symbol. The height (h) of the solid bar shall be the greater of 0.3a or 1 mm. The bar must only be used in conjunction with the crossed out wheeled bin to indicate that the product is put on the market after August 13, 2005.
- C) Use both options A) and B).

All three marking elements (the crossed-out wheeled bin, the producer identification, and the date of manufacture/put on the market or the solid bar under the crossed out wheeled bin) must be present on the Product; however, the specific placement of these markings is not prescribed other than for the relationship of the solid bar to the crossed-out wheeled bin if the bar symbol is used.

**Figure 6.** The marking and dimensional relationship of the solid bar symbol for indication of products manufactured or put on the EU market after August 13, 2005.

The markings must be visible, durable, legible, and indelible; that is, each marking element must be located on a permanent portion of the Product such as a frame member or chassis that cannot be removed or exchanged. Markings can be located behind a door or cover, but must be viewable without the use of a tool by a customer or operator.

European Standard 50419:2005 also prescribes that the marking must meet minimum marking durability requirements. The marking must remain legible after rubbing by hand for 15 seconds with a piece of cloth soaked with water and again for 15 seconds with a piece of cloth soaked with aliphatic solvent hexane. If marking plates or labels are used, after this test they shall not show curling.

#### **2.9.2.1 China WEEE**

The Regulations for the Administration of the Recovery and Disposal of Waste Electric and Electronic Products (hereinafter the "Regulations") have been adopted at the Executive Meeting of the State on August 20th, 2008. The Regulations was effective as of January 1st, 2011. (No.551 Order of the State Council of the People's Republic of China).

The State implements a system of recovery by multiple channels and centralized disposal with respect to waste electric and electronic products. And the State will establish a fund for the disposal of waste electric and electronic products to be used as allowance for the recovery and disposal of electric and electronic products. The manufacturers of electric and electronic products, consignees of import electric and electronic products or their agents shall, as required, perform their obligations of contributing to the fund or waste electric and electronic products disposal.

### **Affected products**

The recovery and disposal of and any activities in relation to the waste electric and electronic products listed in the Catalogue of Waste Electric and Electronic Products for Disposal shall be governed by the Regulations. Scope of products: Microcomputer, including:

- 1) Monitor for desktop microcomputer
- 2) Host-display integrated desktop microcomputer
- 3) Laptop microcomputer (including PDA)
- 4) Other devices for processing of information

#### **Marking**

Add the descriptive text for China WEEE in the SWG and UG of products to declare that Lenovo provide the service for the recycle. If any update in the regulations, follow the latest requirements.

### 2.10 Electronic Product Environmental Assessment Tool (EPEAT) Marking

Products which meet the requirements of the EPEAT program may exhibit the appropriate certification mark on the product, product manual, product promotional materials or packaging. Lenovo Global Environmental Affairs must be contacted to determine the level of EPEAT compliance (if at all) and ensure product is registered in EPEAT database prior to the use of any EPEAT certification mark. Only one form of the mark should be used in any one publication (either preferred mark or optional mark).

### 2.10.1 EPEAT Mark Specifications

- The green EPEAT logo is the primary identifier, and should be used when representing the EPEAT brand holistically.
- Three logo variations distinguish the tiers of the EPEAT rating system: EPEAT Bronze, EPEAT Silver and EPEAT Gold. It's critical that the correct logo variation be associated with each product, and that the tier identifications for all products are kept current.
- Downloadable files of all logos are available to licensees online and by contacting Lenovo Global Environmental Affairs..
- Artwork should never be altered or redrawn.

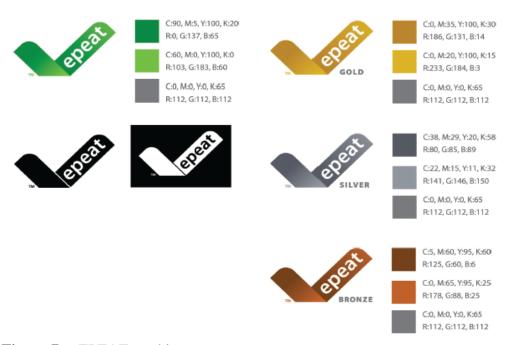

#### Logo Colors

- The logos should be reproduced in full color in all materials, electronic or printed, where full color is available.
- The CMYK (for print) and RGB (for screen) values provided must be used when the logos

appear in color.

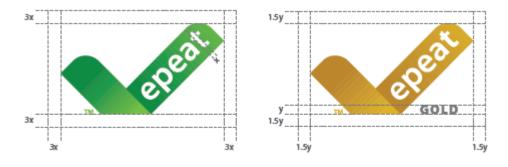

• If your printing method requires the use of singlecolor artwork, the logo must be printed using black ink only. Files for black-only EPEAT logos are available for download.

**Figure 7.** EPEAT markings. **Logo Guidelines** 

#### **Clear Space**

- Always maintain clear space around the EPEAT logo to protect it from distracting graphics or typography.
- For the green primary identifier, measure clear space by using the width of the ascender in "t" as a unit.
- For the Gold, Silver and Bronze logos, measure clear space using the height of the text label (the word GOLD, in the example to the right) as a unit.

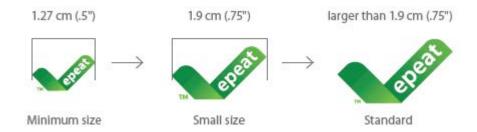

#### **Minimum Size**

28June2020 Page 65 of 190 Version 7.8

- Use the adjusted "small size" artwork when the logo is between 1.27 cm (.5") and 1.9 cm (.75") in width, measured from end to end of the check mark.
- For use on a physical label (for applying to a product or product packaging, for example) never reproduce the logo smaller than 1.27 cm (.5") in width. When using the logo on a website, we also recommend retaining a minimum width of 1.27 cm (.5").

### 2.11 Product Energy Requirements

The following sections summarize requirements for selected geographies.

#### 2.11.1 System Requirements for China

#### **2.11.1.1 Monitors**

Computer monitors shall meet the energy efficiency requirements of Sections 4.2 and Section 4.4 in the National Standard of the People's Republic of China GB 21520-2015. The scope of this standard includes computer monitors with general purpose use, both cathode ray tubes and liquid crystal displays used for computers using normal electrical network voltages and to display equipment with modulator/receivers mainly used for computers.

The standard is not applicable to monitors for engineering, medical and industry use.

#### **Definition**

Off-mode: The mode which cannot be switched off (influenced) by the user and that may persist for an indefinite time when the appliance is connected to the main electricity supply and used in accordance with the manufacturer's instructions.

Enhance-performance display: Display Type 1, which can meet the following requirements.

- 1) horizontal view angle is equal or greater than 160 degree when contrast is 60:1
- 2) intrinsic resolution >= 2,700,000 Pixel/Inch
- 3) colour gamut>=75%

Standard display: Display Type 2, which can not meet the following requirements simultaneously.

- 1) horizontal view angle is equal or greater than 160 degree when contrast is 60:1
- 2) intrinsic resolution  $\geq$  2,700,000 Pixel/Inch

3) colour gamut>=75%

#### Calculation

Energy consumption per unit time will be determined by using the formula below:

$$P_i = \frac{E_i}{t}$$

P<sub>i</sub>- energy consumption per unit time (W);

 $E_{i}$ - energy consumptions (Wh);

t- time consuming (h)

Energy Efficiency will be determined by using the formula below:

$$E_{\rm ff} = \frac{S \times L}{P_{\rm w}}$$

Eff- energy efficiency (cd/W);

S- display screen area (m<sup>2</sup>);

L- display screen brightness (cd/m<sup>2</sup>);

Pw- energy consumption per unit time of working mode (W)

#### **Requirements**

Monitors manufactured after October 1<sup>st</sup>, 2016 must meet Grade 3's requirements of the National Standard of the People's Republic of China GB 21520-2015. See Table 11 in this section about Grade 3's requirements.

Table 11. Minimum Energy Efficiency Requirements for Monitors						
Monitor Type	Energy efficiency /(cd/W)			Offmada	Class made	
Monitor Type	Grade 1	Grade 2	Grade 3	Off mode	Sleep mode	
Standard	2.0	1.5	1.0	0.5W	0.5W	
Enhance-performance	1.5	1.0	0.50	0.5W	1.2W	

### **Label Requirement**

Monitors manufactured after October 1<sup>st</sup>, 2016 shall be tested, reported, registered, and labeled with China Energy Label in accordance with GB21520-2015 and the requirement of the Implementation Rules on China Energy Label for Computer Monitor. See Figure 8 below for an example label.

Figure8a. Example of China Energy Label

Note: The label pattern takes Grade 2 as an example and actual energy efficiency grade shall be depended on product energy efficiency information.

CMYK:77.19.7.0

CMYK:2.98.94.0

The label shall be colorful with blue and white background, with the dimension of  $66 \times 45$ mm

- 1) The label name: China Energy Label
- 2) The label must include below contents
  - a. Name of Manufacturer (or Abbreviation);
  - b. Product Model
  - c. Energy Efficiency Grade
  - d. Energy Efficiency (cd/w);
  - e. Off mode power consumption
  - f. Sleep mode power consumption
  - g. Category of Product (Standard display or Enhanced performance display)
  - h. Reference No. of National Standard on Energy Efficiency
  - i. QR code
- 3) The label can be on the product, or on the minimum packaging, or displayed at least two seconds on the monitor when turning on.
- 4) The label shall be put on the product webpage in accordance with the product if it can be sold by internet.
- 5) The label shall be made by copper plate paper with weight of 80g or heavier.
- 6) The label shall be stuck with self-adhesive glue.
- 7) The label or the information in the label shall also be included in the product instructions if product has, otherwise are not.

Every monitor shipped out of the factory or imported shall be stuck with label. The label can be printed by manufacturer or importer. And the manufacturer or importer shall be responsible for the quality of the label. If used in product description, package and brochure, the label can be enlarged and reduced in proportion, and can be printed in monochrome color. However, the characters in label shall be legible and identifiable.

### 2.11.1.2 Desktops (Including AIO Desktops) and Laptops Computers

Desktop computers including AIOs and laptop computers shall meet the energy efficiency requirements of Section 3.3 in the National Standard of the People's Republic of China GB 28380-2012. The scope of this standard includes desktop computers for common purpose, all-in-one microcomputers ("AIO") with display function, and laptop computers.

This standard is not applicable to Work Station, to Industrial Personal Computer (IPC), to microcomputers with two or above discrete GPUs as well as microcomputers with rated power greater than 750 W. This standard is also not applicable to portable computers and AIOs with screen size of less than 0.2946m (11.6 inch).

#### **Definition**

Off-mode: The power consumption level in the lowest power mode which cannot be switched off (influenced) by the user and that may persist for an indefinite time when the appliance is connected to the main electricity supply and used in accordance with the manufacturer's instructions. For systems where ACPI standards are applicable, Off Mode correlates to ACPI System Level S5 state.

Sleep Mode: A low power state that the computer is capable of entering automatically after a period of inactivity or by manual selection. A computer with sleep capability can quickly "wake" in response to network connections or user interface devices with a latency of < 5 seconds from initiation of wake event to system becoming fully usable including rendering of display. For systems where ACPI standards are applicable. Sleep mode most commonly correlates to ACPI System Level S3 (suspend to RAM) state.

Idle Mode: The mode in which the operating system and other software have completed loading, a user profile has been created, the machine is not asleep, and activity is limited to those basic applications that the system starts by default.

Desktop Computer: A computer where the main unit is intended to be located in a permanent location, often on a desk or on the floor. Desktops are not designed for portability and utilize an external computer display, keyboard, and mouse. Desktops are designed for a broad range of home and office applications.

All-In-One Computer ("AIO"): A desktop system in which the computer and computer display function as a single unit which receives its ac power through a single cable. This kind of desktop computers come in one of two possible forms: (1) a system where the computer display and computer are physically combined into a single unit; or (2) a system packaged as a single system

where the computer display is separate but is connected to the main chassis by a dc power cord and both the computer and computer display are powered from a single power supply. As a subset of desktop computers, All-In-One computers are typically designed to provide similar functionality as desktop systems.

Laptop Computer: A computer designed specifically for portability and to be operated for extended periods of time either with or without a direct connection to an ac power source. Laptop computers must utilize an integrated display and be capable of operation off of an integrated battery or other portable power source. In addition, most laptop computers use an external power supply and have an integrated keyboard and pointing device. Laptop computers are typically designed to provide similar functionality to desktops, including operation of software similar in functionality as that used in desktops. Tablet PCs, which may use touch-sensitive screens along with or instead of other input devices, are considered Laptop Computers in this specification.

Typical Energy Consumption (TEC): A method of testing and comparing the energy performance of computers, which focuses on the typical electricity consumed by a product while in normal operation during a representative period of time. For Desktops and Laptops, the key criterion of the TEC approach is a value for typical annual electricity use, measured in kilowatt-hours (kWh), using measurements of average operational mode power levels scaled by an assumed typical usage model (duty cycle).

#### Category

See Table 12 in this section about product category.

**Table 12 Product Category** 

<b>C</b> 4	Definitions	
Category	Desktops and AIO Desktop Computers	Laptop Computers
A	All desktops don't meet the definition of Category B, Category C, and Category D will be considered as Category A.	All laptops don't meet the definition of Category B and Category C will be considered as Category A.
В	Equal to 2 Physical Cores; and Greater than or equal to 2 gigabytes (GB) of System Memory.	A Discrete GPU
С	Greater than 2 Physical Cores. In addition to the requirement above, models qualifying under Category C must be configured with a minimum of 1 of the following 2 characteristics:  1) Greater than or equal to 2 gigabytes (GB) of System Memory; and/or  2) A Discrete GPU.	Greater than or equal to 2 Physical Cores; Greater than or equal to 2 gigabytes (GB) of System Memory; and A Discrete GPU with a Frame Buffer Width equal to or greater than 128-bit.
D	Greater than or equal to 4 Physical Cores.	

In addition to the requirement above, models qualifying under Category D must be configured with	
a minimum of 1 of the following 2 characteristics:	
1) Greater than or equal to 4 gigabytes (GB) of	
System Memory; and/or	
2) A Discrete GPU with a Frame Buffer Width equal	
to or greater than 128-bit.	

#### **TEC Requirements**

Desktops and Laptops manufactured after September 1<sup>st</sup>, 2012 must meet Grade 3's requirements of the National Standard of the People's Republic of China GB28380-2012. See Table 13 in this section about Grade 3's requirements.

Table 13. Minin	Table 13. Minimum Efficiency Standards for Desktops and Laptops					
Category			TEC			
Cate	gory	Grade 1	Grade 2	Grade 3		
Desktops and	A	98.0+ΣEfa	148.0+ΣEfa	198.0+ΣEfa		
AIO Desktop	В	125.0+ΣEfa	175.0+ΣEfa	225.0+ΣEfa		
Computers	С	159.0+ΣEfa	209.0+ΣEfa	259.0+ΣEfa		
(kWh)	D	184.0+ΣEfa	234.0+ΣEfa	284.0+ΣEfa		
Laptop	A	20.0+ΣEfa	35.0+ΣEfa	45.0+ΣEfa		
Computers	В	26.0+ΣEfa	45.0+ΣEfa	65.0+ΣEfa		
(kWh)	С	54.5+ΣEfa	75.0+ΣEfa	123.5+ΣEfa		
ΣEfa: Sum of po	$\Sigma$ Efa: Sum of power factors with additional functions					

#### Calculation

TEC will be determined by using the formula below:

$$E_{\mathit{TEC}} = \left(8760 / 1000\right) \times \left(P_{\mathit{off}} \times T_{\mathit{off}} + P_{\mathit{sleep}} \times T_{\mathit{sleep}} + P_{\mathit{idle}} \times T_{\mathit{idle}}\right)$$

where all Px are power values in watts, all Tx are time values in % of year, and the TEC  $E_{TEC}$  is in units of kWh and represents annual energy consumption based on mode weightings in Table 14.

**Table 14 Percentage for Each Mode** 

Tx	Desktops	Laptops
$ m T_{off}$	55%	60%
$T_{ m sleep}$	5%	10%
Tidle	40%	30%

Power factors with additional functions will be determined using the Table 15 below:

**Table 15 Power factors with Additional Functions** 

Function	Dogletona	I	Laptops		Instruction
Function	Desktops	A	В	C	Instruction
Memory	1.0/(GB)×(system memory-basic memory)	0.4/(GB)×(system memory-basic memory)			<ul> <li>It is applicable when system memory greater than basic memory.</li> <li>1) The basic memory of Category A,</li></ul>
	46	-	4	-	G1
Diagrata	70	-	12	-	G2
Discrete	95	-	24	37	G3
GPU	140	-	36	49	G4
	394	- 146 159		159	G5
Storage	25*number of HDD	3*numl	oer of H	IDD	additional HDD=number of HDD-1

Discrete GPU will be determined by using the Table 16 below:

**Table 16 Discrete GPU Category** 

10 2 10 11 10 10 10 10 10 10 10 10 10 10 10				
Category	FBBW			
G1	FBBW≤16			
G2	16 <fbbw≤ 32<="" td=""></fbbw≤>			
G3	32 <fbbw≤ 64<="" td=""></fbbw≤>			
G4	64 <fbbw≤ 128<="" td=""></fbbw≤>			
G5	FBBW>128			

FBBW will be determined by using the formula below:

$$FBBW = (DR \times DW) \div (8 \times 1000)$$

FBBW- Memory Bandwidth (GB/s);

DR- VRAM equivalent frequency (MHz);

DW- Bus Width (Bit)

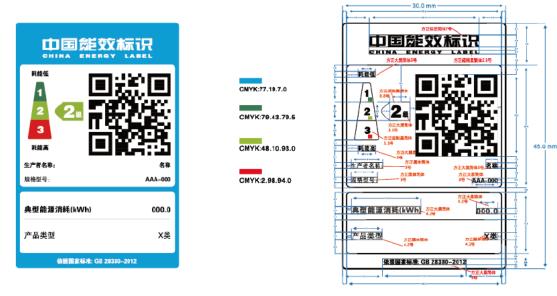

#### **Label Requirement**

Microcomputers manufactured after October 1<sup>st</sup>, 2016 shall be tested, reported, registered, and labeled with China Energy Label in accordance with GB28380-2012 and the requirement of the Implementation Rules on China Energy Label for Microcomputer. See Figure 8b below for an example label.

28June2020 Page 72 of 190 Version 7.8

Figure 8b. Example of China Energy Label

Note: The label pattern takes Grade 2 as an example and actual energy efficiency grade shall be depended on product energy efficiency information.

The label shall be colorful with blue and white background, with the dimension of  $45 \times 30$ mm

- 1) The label name: China Energy Label
- 2) The label must include below contents
  - i. Name of Manufacturer (or Abbreviation);
  - k. Product Model
  - 1. Energy Efficiency Grade
  - m. TEC (kWh);
  - n. Product Catogery
  - o. Reference No. of National Standard on Energy Efficiency
  - p. QR code
- 3) The label can be on the product or on the minimum packaging
- 4) The label shall be put on the product webpage in accordance with the product if it can be sold by internet.
- 5) The label shall be made by copper plate paper with weight of 80g or heavier.
- 6) The label shall be stuck with self-adhesive glue.
- 7) The label or the information in the label shall also be included in the product instructions if product has, otherwise are not.

Every microcomputer shipped out of the factory or imported shall be stuck with label. The label can be printed by manufacturer or importer. And the manufacturer or importer shall be responsible for the quality of the label. If used in product description, package and brochure, the label can be

enlarged and reduced in proportion, and can be printed in monochrome color. However, the characters in label shall be legible and identifiable.

#### 2.11.1.3 Printers and Fax Machines

Printers and Fax machines shall meet the energy efficiency requirements of section 4.2 in the National Standard of the People's Republic of China GB21521-2014.

This standard is applicable to the product working in 220V/50Hz with standard size.

This standard is not applicable to the product as follow.

- a. Supplied by the battery or network interface (such as USB, IEEE1394 interface).
- b. With DFE
- c. Output speed faster than 70p/m
- d. The number of needles of printing head greater than 48

#### **Definition**

Off-mode: The mode which cannot be switched off (influenced) by the user and that may persist for an indefinite time when the appliance is connected to the main electricity supply and used in accordance with the manufacturer's instructions.

Active mode: The mode in which the product is carrying out useful work in response to a) prior or concurrent user input or b) prior or concurrent instruction over the network.

Ready mode: The mode in which the operating system turning from active mode after working is done.

Sleep mode: A low power state that the product is capable of entering automatically after a period of inactivity or by manual selection.

Standby mode: A power state with the energy consumption no higher than sleep mode. This state can be the off-mode or the ready mode or sleep mode.

Printing/fax speed: The number of A4 paper was printed per minute

#### Calculation

1) TEC will be determined by using the formula below:

$$TEC = [(E_d \times 5) + (P_s \times 48)]/1000$$

TEC- typical energy consumption (kW.h);

E<sub>d</sub>- energy consumption in one day (W.h);

P<sub>s</sub>- the average power in one hour after entering sleep mode (W)

2) E<sub>d</sub> will be determined by using the formula below:

$$E_d = E_{dj} + 2E_f + E_s$$

E<sub>dj</sub>- energy consumption by completing total working tasks in one day (Wh);

E<sub>f</sub>- energy consumption of the period from completing last working task to entering in sleep mode (Wh);

E<sub>s</sub>- energy consumption of sleep mode in one day (Wh)

3) E<sub>di</sub> will be determined by using the formula below:

$$E_{di} = E_{il} \times 2 + \left[ \left( M_{id} - 2 \right) \times E_{i} \right]$$

E<sub>il</sub>- energy consumption by completing the first working tasks (Wh);

M<sub>jd</sub>- the number of typical working task completed in one day;

E<sub>i</sub>- average energy consumption (Wh)

4) E<sub>s</sub> will be determined by using the formula below:

$$E_s = \left\{24 - \left[ \left( M_{id} / 4 \right) + \left( t_i \times 2 \right) \right] \right\} \times P_s$$

t<sub>i</sub>- the time of the period from completing fourth working task to entering in sleep mode (h)

5) E<sub>i</sub> will be determined by using the formula below:

$$E_j = (E_{j2} + E_{j3} + E_{j4})/3$$

 $E_{i2}$ - energy consumption by completing the second working tasks (Wh);

E<sub>i3</sub>- energy consumption by completing the third working tasks (Wh);

E<sub>i4</sub>- energy consumption by completing the fourth working tasks (Wh);

6) M<sub>id</sub> will be determined by using the Table 17 below:

Table 17 M<sub>id</sub> Category

Print speed (p) (paper/min)	$M_{ m jd}$
0 <p≤8< td=""><td>8</td></p≤8<>	8
8 <p≤32< td=""><td>P</td></p≤32<>	P
p>32	32

7) P<sub>OM</sub> will be determined by using the formula below:

$$P_{\rm OM} = \frac{E_{\rm s}}{t_{\rm s}}$$

E<sub>s</sub>- energy consumption of sleep mode (W.h);

t<sub>s</sub>- time used for testing Es (h)

8)  $\sum P_{fa}$  will be determined by using the Table 18 below:

Power factor with additional function ( $\sum P_{fa}$ ) can only be selected no more than three basic value, others will be considered as additional value.

**Table 18. Power Factor with Additional Function Determination** 

$P_{fa}(W)$	Instruction for additional function
0.2	data or network interface, including USB1.*, IEEE488 and
0.2	IEEE1284 interface, Parallel, Centronics, R32 and etc.
0.4	data or network interface, including USB2.*, IEEE1394
0.4	and 100Mb Ethernet interface
0.5	including USB3.x and 1Gb Ethernet interface
0.5	merading OSDS.x and 100 Emerica interface
0.2	including flash memory card, smart card reader and digital
0.2	camera interface
0.2	Only applicable to Fax machine and MFP
2.0	including Bluetooth and 802.11interface
0.1	Including TrDA
	this factor can only be used once when the wireless
0.8	microphone volume product can be connected were not
	considered
0.5	determined by the total memory capacity
0.5	Only applicable to Fax machine and MFP.
0.5	This factor can be used once
0.02*(Pout - 10)	Only applicable to Pout is greater than 10W. Poot is sum of
0.02 (1 Out - 10)	internal& external power nominal rated DC output power.
0.2	Applicable to monochrome and colorful panel
0.15	products containing internal storage medium like disk
0.13	drives, DVD drive, ZIP drive
	0.2  0.4  0.5  0.2  0.2  2.0  0.1  0.8  0.5  0.5  0.05

9) P<sub>std</sub> will be determined by using the formula below:

$$P_{std} = E_{srd} / t_{std}$$

E<sub>std</sub>- energy consumption of standard mode (W.h);

 $T_{std}$ - the time used for testing  $E_{std}$  (h)

#### **TEC Requirements**

1) Product using thermo-sensitive, thermo-sublimation, electronic image, solid wax spray, thermal transfer technology and high performance ink jet technology manufactured after Jan. 1<sup>st</sup>, 2015 must meet Grade 3's requirements of the National Standard of the People's Republic of China GB 21521-2015. See Table 19 in this section about Grade 3's requirements.

Table 19. Minimum Energy Efficiency Requirements for Printers by using TEC method.

产品类型	输出速度(p)	典型能耗 kW・h		
	页/min	1级	2 级	3 级
	<i>p</i> ≤5	€0.20	€0.30	€1.00

Note1: The difference between high performance ink jet technology and conventional ink jet technology is whether to have a nozzle array across the width of the page or drying medium ink by using increase medium heating technology

2) Product using ink jet or stylus beating technology manufactured after Jan. 1<sup>st</sup>, 2015 must meet Grade 3's requirements of the National Standard of the People's Republic of China GB 21521-2015. See Table 20 in this section about Grade 3's requirements.

Table 20. Minimum Energy Efficiency Requirements by using OM method.

	Energy Efficiency Grade					
Technology	Grade	1	Grade 2	2	Grade 3	}
	P <sub>OM</sub>	$P_{Std}$	P <sub>OM</sub>	$P_{Std}$	P <sub>OM</sub>	$P_{Std}$
ink jet	$0.6+\sum P_{fa}$	0.5	$1.0+\sum P_{fa}$	0.5	$1.4+\sum P_{fa}$	1.0
stylus beating	$0.6+\sum P_{fa}$	0.5	$2.6+\sum P_{fa}$	0.5	$4.6+\sum P_{fa}$	1.0
$\sum D$ cover of newson factor with additional function						

 $\sum P_{fa}$  sum of power factor with additional function

#### **Label Requirements**

Printers, Fax Machines and Copy Machines manufactured after Oct. 1<sup>st</sup>, 2016 shall be tested, reported, registered, and labeled with China Energy Label in accordance with the GB21521-2015 and the requirement of the Implementation Rules on China Energy Label for Printers, Fax Machines and Copy Machines. See Figure 9 and Figure 10 below for an example label.

Figure 9. Example of China Energy Label for High Performance Ink Jet Technology\*

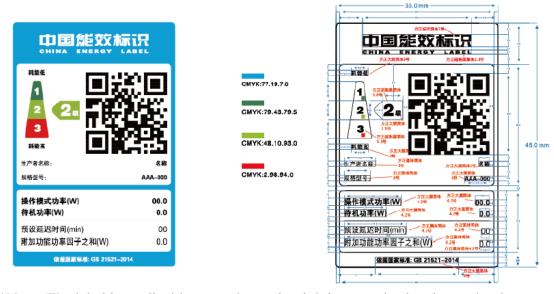

\*Note: The label is applicable to product using thermo-sensitive, thermo-sublimation, electronic image, solid wax spray, thermal transfer technology and high performance ink jet technology

Figure 10. Example of China Energy Label for Stylus Beating Technology\*

\*Note: The label is applicable to product using ink jet or stylus beating technology

Product using thermo-sensitive, thermo-sublimation, electronic image, solid wax spray, thermal transfer technology and high performance ink jet technology should meet following requirements: The label shall be colorful with blue and white background, with the dimension of  $45 \times 30$ mm.

- 1) The label name: China Energy Label
- 2) The label must include below contents
  - a. the name of the manufacturer
  - b. product model
  - c. energy efficiency grade
  - d. TEC
  - e. code number of National Standard applied
  - f. OR code
- 3) The label can be on the product, or on the minimum packaging.
- 4) The label shall be made by copper plate paper of 80g or heavier.
- 5) The label shall be stuck with self-adhesive glue.
- 6) The label or the information in the label shall also be included in the product instructions if product has, otherwise are not.

Product using ink jet or stylus beating technology should meet following requirements: The label shall be colorful with blue and white background, with the dimension of  $45\times30$ mm

1) The label name: China Energy Label

- 2) The label must include below contents
  - a) the name of the manufacturer
  - b) product model
  - c) energy efficiency grade
  - d) Pom
  - e) P<sub>Std</sub>
  - f) default delay time
  - g) sum of power factor with additional function
  - h) Code number of National Standard of Energy Efficiency applied
  - i) OR code
- 3) The label can be on the product, or on the minimum packaging.
- 4) The label shall be made by copper plate paper of 80g or heavier.
- 5) The label shall be stuck with self-adhesive glue.
- 6) The label or the information in the label shall also be included in the product instructions if product has, otherwise are not.

Every printer, fax machines and copy machines shipped out of the factory or imported shall be stuck with label. The label can be printed by manufacturer or importer. And the manufacturer or importer shall be responsible for the quality of the label. If used in product description, package and brochure, the label can be enlarged and reduced in proportion, and be printed in monochrome color. However, the characters in label shall be legible and identifiable.

#### 2.11.1.4 Flat Panel TVs

Flat Panel TVs shall meet the energy efficiency requirements of Sections 4.2 and section 4.4 in the National Standard of the People's Republic of China GB 24850-2013. This standard is applicable to LCD TV and plasma TV with common using purpose. This standard is also applicable to the LCD or plasma display device without tuner which has TV function.

#### **Definition**

On mode: The mode in which the operating system and other software have completed loading, a user profile has been created, the machine is not asleep, and activity is limited to those basic applications that the system starts by default.

Passive standby mode: A power state without sound and image. This state can be switched to the off-mode or on mode by using RC or other external signals.

Passive standby power: The active power of passive standby mode, by using the testing method defined by this standard.

On mode static power (Pj): the active power of playing static image testing in the state of on mode, by using the testing method defined by this standard.

On mode dynamic power (Pd): the active power of playing dynamic sequence testing in the state of on mode, by using the testing method defined by this standard.

Fluctuation values of power ( $\triangle P$ ): (Pj-Pd)/Pj\*100%

#### **Calculation**

Fluctuation values of power ( $\triangle P$ ) will be determined by using the formula below:

$$\triangle P = \frac{\left| P_j - P_d \right|}{P_i} \times 100\%$$

P<sub>i</sub>- on mode static power (W);

P<sub>d</sub>- on mode dynamic power (W)

 $\triangle P$  - fluctuation values of power

On mode power (P<sub>k</sub>) will be determined by using the Table 21 below.

#### **Table 21 On Mode Power**

△P / 30%	≤30	>30
$P_k / W$	$P_d$	$P_k = P_d$ , if $P_d > P_j$ ; Otherwise, $P_k = P_j$

Energy Efficiency will be determined by using the formula below:

$$Eff = \frac{L \times S}{P_k - P_s}$$

Eff- energy efficiency (cd/W);

S- display screen area (m2);

L- display screen brightness (cd/m2);

 $P_k$ - energy consumption of on mode (W)

P<sub>s</sub>- energy consumption of signal processing (W)

Note: P<sub>s</sub> will be 4 when input is using through simulative RF port; P<sub>s</sub> will be 8 when input is using through digital RF port; for others P<sub>s</sub> will be 0.

Energy Efficiency Index for LCD TV will be determined by using the formula below:

$$EEI_{LCD} = \frac{Eff}{Eff_{LCD,ref}}$$

EEI<sub>LCD</sub>- energy efficiency index for LCD TV, 1;

Eff<sub>LCD, ref</sub>- energy efficiency baseline index, 1.1cd/W

Energy Efficiency Index for plasma TV will be determined by using the formula below:

$$EEI_{PDP} = \frac{Eff}{Eff_{PDP,ref}}$$

EEI<sub>PDP</sub>- energy efficiency index for plasma TV, 1;

Eff<sub>PDP, ref</sub>- energy efficiency baseline index, refer to below Table 22.

**Table 22 Energy Efficiency Baseline Index** 

inherent resolution	>= 1920*1080	others
Eff <sub>PDP, ref</sub> (cd/W)	0.320	0.450

#### **Energy Efficiency Requirements**

Product manufactured after Oct. 1<sup>st</sup>, 2013 must meet Grade 3's requirements of the National Standard of the People's Republic of China GB 24850-2013. See Table 23 in this section about Grade 3's requirements.

Table 23. Minimum Energy Efficiency Requirements for LCD TV and plasma TV

	- 80		
EEI		<b>Energy Efficiency</b>	
EEI	Grade 1	Grade 2	Grade 3
EEI <sub>LCD</sub>	2.7	2.0	1.3
EEI <sub>PDP</sub>	2.0	1.6	1.2
Effective date	;	Power Consumption Limit	
Power of passive st mode	andby	<=0.50	

Note: the EEI value should keep the two significant figures

#### **Label Requirements**

Flat Panel TVs manufactured after Oct. 1<sup>st</sup>, 2016 shall be tested, reported, registered, and labeled with China Energy Label in accordance with the GB24850-2013 and the requirement of the Implementation Rules on China Energy Label for Flat Panel TVs. See Figure 11a and Figure 11b below for an example label.

Figure 11a. Example of China Energy Label

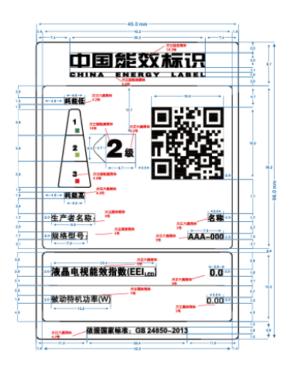

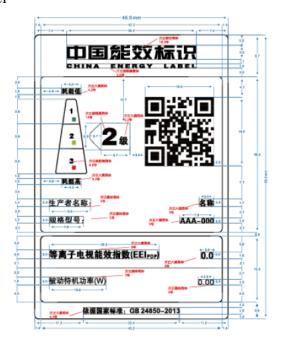

Figure 11b. Example of China Energy Label

The label shall be colorful with blue and white background, with the dimension of 66×45mm

- 1) The label name: China Energy Label
- 2) The label must include below contents
  - a. the name of the manufacturer
  - b. product model
  - c. energy efficiency grade
  - d. EEI
    - i. EEI<sub>LCD</sub>
    - ii. EEI<sub>PDP</sub>
  - e. power of passive standby mode
  - f. code number of National Standard applied
  - g. QR code
- 3) The label can be on the product, or on the packaging, or displayed at least two seconds on the monitor when turning on.
- 4) The label shall be made by copper plate paper of 80g or heavier.
- 5) The label shall be stuck with self-adhesive glue.
- 6) The label or the information in the label shall also be included in the product instructions if product has, otherwise are not.

Every Flat Panel TV shipped out of the factory or imported shall be stuck with label, and be explained in product User Guide. The label can be printed by manufacturer or importer. And the manufacturer or importer shall be responsible for the quality of the label. If used in product description, package and brochure, the label can be enlarged and reduced in proportion, and be printed in monochrome color. However, the characters in label shall be legible and identifiable.

#### 2.11.2 Requirements for Korea

## Standby Product meeting standby power criteria : e-Standby Warning Label Products (Mandatory)

In 2008, certain products were designated as requiring mandatory energy efficiency labeling. Therefore, besides the best e-standby product labeling program (voluntary), manufacturers or importers of certain MKE and KEMCO designated electric appliances ("e-Standby Warning Label Products") must test covered products by a designated testing institution and report the testing result to KEMCO. If the standby power falls short of the e-standby power reduction criteria the manufacturer or importer is legally obliged to attach an e-Standby Warning Label.

MKE and KEMCO designated the following 7 products as e-Standby Warning Label Products: computers, monitors, printers, multifunction devices, televisions, set top boxes, and microwave ovens. However, this mandatory labeling system became effective only with respect to televisions as of August 28, 2008; it will further become effective with respect to the remaining six products as of July 1, 2009. In addition, beginning January 1, 2010, almost all target products of the e-Standby Program will become the target products of the e-Standby Warning Label system.

#### **Definitions**

**Computer -** Computers with nameplate output power of power supply less than equal to 1,000W. Covers mainly computers sold commercially or for household use in the market, including personal computers, notebook computers, and including integrated computer systems. Computers for network servers, workstations and computers in standby mode awaiting instructions remotely are excluded

**Monitor -** Electrical appliance with rated power consumption of 1000W or less, consisting of a display screen (CRT, LCD, PDP, etc.) to display the output information from the computer via one or more input terminals such as VGA or DVI terminal, and its associated electronic equipment. This includes those with both computer monitor and TV functions, either with a focus on computer monitor as the primary function or with equal dual function. Integrated computer systems (where computer and monitor combined into a single unit), network monitor and monitors embedded with special functions including VoIP are excluded.

#### Requirements

Computers and Monitors must be labeled according to Annex VII of the Korean e-Standby Program Application Regulation, August 28, 2008 with a warning logo if the monitors do not meet the requirements in the following tables:

Table 24. Low Power Performance Requirements			
Category	Watts in Sleep Mode	Watts in Off mode	
Monitor	<2.0W	<1.0W	

Category	Sleep mode		Watts in
	Default time	Watts in low power mode	off mode
Personal Computers(Laptop)	≤30 min	≤1.7W	≤1.0W
Personal Computers(Desktop)	≤30 min	≤4.0W	≤2.0W
Integrated Computer System	≤30 min	≤4.0W	≤2.0W

Note: When applying the standards listed in table above to computers shipped to the market, additional allowable tolerance of +0.7W is given at sleep and off modes for computers with WOL (Wake on Lan) function.

The figure below has an example warning logo. The minimum diameter of the logo is 2.5cm. The logo is to be labeled on the front or top side of the product. The logo may be monochrome, the predominant color of the product's surface, or in the colors suggested by the Korean e-Standby Regulation.

Figure 12. Example of a Warning Logo for e-Standby Power Program Target Products.

The manufacturer of the monitor shall submit the appropriate reporting forms as required to the Korea Energy Management Corporation (KEMCO).

#### 2.11.3 Requirements for the EU, Switzerland, Norway, Turkey, Israel, and other jurisdictions

This section applies to Energy Using Products (EUP) including information technology equipment intended primarily for use in the domestic environment (see Annex I of EU Commission Regulation No 1275/2008.)

#### **Definitions**

Electrical and electronic household and office equipment - means any energy-using product which:

- (a) is made commercially available as a single functional unit and is intended for the end-user;
- (b) falls under the list of energy-using products of Annex I (in EU Regulation (EC) No 1275/2008);
- (c) is dependent on energy input from the mains power source in order to work as intended; and
- (d) is designed for use with a nominal voltage rating of 250 V or below.

This definition is from EU Commission Regulation (EC) No 1275/2008. Energy-using products in Annex I include information technology equipment intended primarily for use in the domestic environment which means products classified as Class B per EN55022 in EU Directive 89/336/EEC for Electromagnetic Compatibility (EMC). Examples of products which may be classified as Class B include monitors, workstations and laptops. EU Regulation 1275/2008 for ecodesign requirements for standby and off mode electric power consumption of electrical and electronic household and office equipment can be found at:

Http://eur-lex.europa.eu/LexUriServ/LexUriServ.do?uri=OJ:L:2008:339:0045:0052:EN:PDF

#### Requirements

Electronic equipment, such as monitors, workstations and laptops which are EMC Class B Information Technology equipment as defined in EN 55022:2006+A1:2007 or EN 55022:2010 and newly releasing must meet the following requirements:

- 1. Power consumption in off-mode shall not exceed 0.50 W,
- 2. Power consumption in standby mode with a reactivation function shall not exceed 0.50 W,
- 3. Power consumption in standby mode providing only information or status display shall not exceed 1.00 W, and

4. When equipment is not providing the main function, or when other energy-using product(s) are not dependent on its functions, equipment shall, unless inappropriate for the intended use, offer a power management function that switches equipment after the shortest possible period of time into standby mode, or off mode, or another condition which does not exceed the applicable power consumption requirements for off mode and/or standby mode when the equipment is connected to the mains power supply.

Electronic equipment, such as monitors, workstations and laptops which are EMC Class B Information Technology equipment as defined in EN 55022:2006 or EN 55022:2010 and currently shipping as of September 1, 2009 must meet the following requirements:

- 1. Power consumption in off-mode shall not exceed 1.0 W,
- 2. Power consumption in standby mode with a reactivation function shall not exceed 1.0 W,
- 3. Power consumption in standby mode providing only information or status display shall not exceed 2.00 W, and

<u>The product must be marked with the CE conformity marking</u>. See the following Figure. The CE mark must have a height of at least 5 mm. The CE marking must be affixed to the EuP. Where this is not possible, it must be affixed to the packaging and to the accompanying documents.

Figure 13. Example of CE Conformity Marking.

The following technical documents must be provided to Lenovo:

- A. Declaration of Conformity (DoC) to EU Regulation 1275/2008 as required by EU Directive 2009/125/EC. The DoC must include:
- i. Name and address of the manufacturer or of its authorized representative;
- ii. A description of the model sufficient for unambiguous identification;
- iii. Where appropriate, the references of the harmonized standards applied;
- iv. Where appropriate, the other technical standards and specifications used;
- v. Where appropriate, the reference to other EU Community legislation providing for the affixing of the CE mark that is applied;
- vi. Identification and signature of the person empowered to bind the manufacturer or its authorized representative.
- B. Statement indicating which energy efficiency tier (or both) the DoC applies to (see the first two paragraphs of this section for energy efficiency tier information), and
- C. The technical documentation showing efficiency data must be provided. The technical documentation must meet the requirements of Annex IV of EU Commission Regulation No

28June2020 Page 87 of 190 Version 7.8

1275/2008. For Israel, testing must be conducted at an approved Standards Institute of Israel (SII) testing facility in Israel and the results provided to Lenovo.

# 2.11.4 External Power Supplies, Adapters and Chargers 2.11.4.1 Requirements for USA/ Australia/ New Zealand Definitions

External Power Supply (EPS) – A single voltage external AC to DC or AC to AC power supply is a device designed to convert line voltage AC input to a lower AC or DC voltage, converting to only 1 AC or DC output at a time, is sold with or intended to be used with a separate end-use product that constitutes the primary load, is contained in a separate physical enclosure from the end use product, is connected to the end-use product via removable or hard wired male/female electrical connection, cable, cord or other wiring, and has a nameplate output power less than or equal to 250 watts. Please note, for Australia and New Zealand only, these countries have an additional phrase for the definition of an EPS. The EPS must have an input from a mains supply. The EPS must have an integral mains plug to be within scope of the Australia/NZ requirements.

#### Requirements

External power supplies manufactured after February 10, 2016 must meet the requirements of the Department of Energy - 10 CFR Part 430, RIN: 1904-AB57, Docket ID, ERE-2008-BT-STD-0005. The efficiency standards are listed below.

Table 25. Direct Operation External Power Supply Efficiency Standards (Beginning February 10, 2016)			
Single-voltage External AC-DC Power Supply, Basic Voltage			
Nameplate Output Power	Minimum Average Efficiency in Active	Maximum Power in No-Load	
(Pout)	Mode	Mode [W]	
	(expressed as a decimal)		
Pout ≤1 W	$\geq$ 0.5 × Pout + 0.16	<u>&lt;</u> 0.100	
1 W < P <sub>out</sub> ≤49 W	$\geq$ 0.071 × ln(P <sub>out</sub> ) - 0.0014 × P <sub>out</sub> + 0.67	<u>&lt;</u> 0.100	
49 W < Pout < 250 W	<u>&gt;</u> 0.880	<u>&lt; 0.210</u>	
Pout > 250 W	≥0.875	< <u>0.500</u>	
Single	e-Voltage External AC-DC Power Supply, L	ow-Voltage	
Nameplate Output Power	Minimum Average Efficiency in Active	Maximum Power in No-Load	
(Pout)	Mode	Mode [W]	
	(expressed as a decimal)		
Pout ≤1 W	$\geq$ 0.517 × Pout + 0.087	<u>&lt;</u> 0.100	
1 W < Pout <u>&lt; 4</u> 9 W	$\geq$ 0.0834 × ln(Pout) - 0.0014 × Pout +	<u>&lt;</u> 0.100	
	0.609		
49 W < Pout < 250 W	<u>&gt;</u> 0.870	<u>&lt; 0.210</u>	
Pout > 250 W	<u>&gt;</u> 0.875	<u>&lt; 0.500</u>	
	e-voltage External AC-AC Power Supply, Ba	sic Voltage	
Nameplate Output Power	Minimum Average Efficiency in Active	Maximum Power in No-Load	
(Pout)	Mode	Mode [W]	
	(expressed as a decimal)		
$\begin{array}{c c} Pout & \underline{<} 1 \text{ W} \\ 1 \text{ W} < Pout \leq 49 \text{ W} \end{array}$	$\geq 0.5 \times \text{Pout} + 0.16$ $\geq 0.071 \times \ln(\text{Pout}) - 0.0014 \times \text{Pout} + 0.67$	<0.100 <0.100	

49 W < Pout < 250 W	<u>&gt;</u> 0.880	<u>&lt; 0.210</u>
Pout > 250 W	<u>≥</u> 0.875	<u>&lt;</u> 0.500
Singl	e-Voltage External AC-AC Power Supply, Lo	ow-Voltage
Nameplate Output Power	Minimum Average Efficiency in Active	Maximum Power in No-Load
(Pout)	Mode	Mode [W]
	(expressed as a decimal)	
Pout <1 W	$\geq$ 0.517 × Pout + 0.087	< 0.100
1 W < Pout < 49 W	$\geq$ 0.0834 × ln(Pout) - 0.0014 × Pout +	< 0.100
	0.609	
49 W < Pout < 250 W	<u>&gt;</u> 0.870	<u>&lt; 0.210</u>
Pout > 250 W	<u>≥</u> 0.875	<u>&lt; 0.500</u>
	Multiple Voltage External Power Supply	Ÿ
Nameplate Output Power	Minimum Average Efficiency in Active	Maximum Power in No-Load
(Pout)	Mode	Mode [W]
	(expressed as a decimal)	
Pout <1 W	$\geq$ 0.497 × Pout + 0.067	<u>&lt; 0.300</u>
1 W < Pout <u>&lt; 4</u> 9 W	$\geq$ 0.075 × ln(Pout) + 0.561	<u>&lt; 0.300</u>
Pout <u>&gt;</u> 49 W	<u>&gt;</u> 0.860	<u>&lt;</u> 0.300

The power supply and packaging must be labeled according to the International Efficiency Marking Protocol. In keeping with the above efficiency standards, the power supply must have a marking of IV or higher. The marking is determined by comparing the unit's active and no load test data with the performance requirements of the International Efficiency Marking Protocol scale. The marking shall be permanently shown on the nameplate of the power supply. The font should be a plain serif font such as Times Roman. The size must be legible and indelible in a color that contrasts with the nameplate background. The label must include the manufacturer's name, model number, and Date of Manufacture. Further information about the International Efficiency Marking Protocol can be found at:

http://www.energystar.gov/ia/partners/prod\_development/revisions/downloads/International\_Efficiency\_Marking\_Protocol.pdf

The manufacturer must register each model or family of models in Australia, New Zealand and other jurisdictions as required (e.g., Arizona, New York, and Oregon.) The state of Oregon requires the manufacturer of a single voltage AC to DC power supply to certify with a letter that the product is compliant and has been tested. The supplier must provide Lenovo with a copy the Energy Efficiency test results, used to verify the supply meets the IV mark criteria. See the following web site for more details for registration in Australia: <a href="http://www.energyrating.gov.au/regulations/">http://www.energyrating.gov.au/regulations/</a>

In addition to the above, a Class A EPS must meet the US Department of Energy rule for Certification, Compliance and Enforcement Requirements for Certain Consumer Products and Commercial and Industrial Equipment, 75 Federal Register Regulation 652.

A Class A EPS is defined as an EPS which meets the following criteria:

- Designed to convert line voltage AC input into lower voltage AC or DC output;
- Sold with or intended to be used with, a separate end-use product that constitutes the primary load;
- Contained in a separate physical enclosure from the end-use product;
- Connected to the end-use product via a removable or hard-wired male/female electrical connection, cable, cord, or other wiring;
- Nameplate output power 250 watts or less; and
- Able to convert to only one AC or DC output voltage at a time

Class A EPS does not include any device that –

- Requires Federal Food and Drug Administration listing and approval as a medical device in accordance with section 513 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 360c); or
- Powers the charge of a detachable battery pack or charges the battery or a product that is fully or primarily motor operated.

Class A EPSs must meet the energy requirements in Table 25 above. Exceptions to this include EPSs which were:

- Manufactured during the period beginning on July 1, 2008, and ending on June 30, 2015; and
- Made available by the manufacturer as a service part or a spare part for an end-use product
  - That constitutes the primary load; and
  - Was manufactured before July 1, 2008.

Class A EPSs which are in scope of this requirement as cited above must be certified by the manufacturer to the US Department of Energy with test results and a compliance statement. See US 10 CFR Part 429 Subpart B Certification, 429.10 through 429.71 for more information at http://ecfr.gpoaccess.gov/cgi/t/text/textidx?c=ecfr;sid=11d3a1f4f775aa25c0e125fe9dab140d;rgn=div5;view=text;node=10%3A3.0.1.4.17;idno=10;cc=ecfr

Test procedures for energy efficiency measurements as cited in US 10 CFR Part 430, must be followed for External Power Supplies and Battery Chargers. Please refer to the following web site for more details:

http://www1.eere.energy.gov/buildings/appliance\_standards/residential/battery\_external.html

#### 2.11.4.2 Requirements for Canada

**Definitions** 

External Power Supply (EPS) means a power supply device that

- a) is designed to convert line voltage AC input to a lower voltage DC or AC output,
- b) is able to convert to only one DC or AC output voltage at a time,
- c) is designed to be used with a household or office end-use product that constitutes the primary load,

- d) is encased in an enclosure separated from that end-use product and is connected to that product by an electrical connection, and
- e) has a nominal output power of 250 W or less.

#### An EPS does not include a device

- a) that powers the charger of a detachable battery pack of an end-use product,
- b) that charges the battery of an end-use product that is fully or primarily motor operated,
- c) that is an accessory to a medical device as defined in section 1 of Canada Medical Devices Regulations, or
- d) that is a power sourcing equipment as defined in IEEE 802.3-2008 Standard for Information Technology Telecommunications and Information Exchange Between Systems.

The scope is limited to EPSs designed for household and office end-use products.

Replacement External Power Supply means an external power supply that

- a. is marked for replacement of a specified end-use product that was manufactured before July 1, 2010, and
- b. is imported or shipped in quantities of less than fifty units.

Security External Power Supply is an EPS that is manufactured before July 1, 2017 and

- a) is designed to convert line voltage ac input into lower voltage ac output,
- b) has a nominal output power of 20 W or more, and
- c) is designed for and marketed with equipment that operates continuously in on mode to perform any of the following principal functions:
  - i. monitor, detect, record or provide notification of any intrusion on or access to real property or physical assets or notification of threats to personal safety resulting from that intrusion or access,
  - ii. deter or control access to real property or physical assets or prevent the unauthorized removal of physical assets, or
  - iii. monitor, detect, record or provide notification of any physical threats to real property, physical assets or personal safety, including fire, gas, smoke and flooding.

A Security EPS does not include an EPS for equipment that is designed and marketed with a built-in alarm or theft deterrent feature if the equipment's principal functions are not any of the functions mentioned above. There is an exemption for no-load power requirements for Security EPSs manufactured before July 1, 2017. See regulation for more details.

#### Requirements

External power supplies must meet the following requirements (not applicable to replacement EPS manufactured before July 1, 2013)

**Table 26: EPS Efficiency Requirement for Canada** 

**External Power Supply Energy Efficiency Standard** 

Nameplate output (nominal power Ln)	Minimum average efficiency in active mode (decimal equivalent of a percentage)	Maximum power in no-load mode (not applicable to security EPS)
<1 watt	0.5 *Ln (nameplate output)	0.5 watt
≥1 watt and ≤51 watts	0.09*Ln (nameplate output) + $0.5$	0.5 watt
>51 watts	0.85	0.5 watt

#### **Verification Requirements**

The EPS must bear a verification mark indicating that the energy efficiency reporting requirements have been verified. The verification mark is the mark of a Standards Council of Canada (SCC) accredited certification body that administers an energy performance verification program for EPSs. The use of the Roman numeral IV is accepted as an alternative to the energy efficiency verification mark for EPSs if:

- the Roman numeral is clearly indicated on the product according to the ENERGY STAR® protocol, and
- the product performance is initially verified by an SCC accredited certification organization offering an EPS energy efficiency verification program.

Additional information about the ENERGY STAR® protocol can be found at <a href="http://www.energystar.gov/ia/partners/prod\_development/revisions/downloads/International\_Efficiency\_Marking\_Protocol.pdf">http://www.energystar.gov/ia/partners/prod\_development/revisions/downloads/International\_Efficiency\_Marking\_Protocol.pdf</a>

A model number must be clearly marked on the product which can be traced to the certification body's energy performance verification. This certification must be provided to Lenovo. The manufacturer or the dealer of the External Power Supply must submit to Natural Resources Canada an energy efficiency report, which must include:

- a) product name,
- b) manufacturer name,
- c) brand name,
- d) model number,
- e) nominal output, in volts, at highest and lowest output setting,
- f) nominal output, in watts, at highest and lowest output setting, if applicable,
- g) whether the output is AC or DC,
- h) the average efficiency at highest and lowest output setting,
- i) no load power in watts,
- j) whether it is a replacement external power supply or a security EPS,
- k) if a replacement EPS or a security EPS, the end-use equipment and the brand and model number of that equipment,
- 1) roman numeral mark, if applicable,
- m) whether the product bears a verification mark
- n) name of the certification body associated with verifying the Roman numeral mark or that authorized the verification mark that appears on the product.

A dealer who imports external power supplies into Canada must include on the customs release document:

- a) product name (i.e., EPS)
- b) model number
- c) brand name
- d) address of the dealer importing the product
- e) purpose for which the product is being imported (e.g., for sale of lease in Canada without modification)

Replacement EPSs, which meet the definition above are exempt from MEPS until July 1, 2013, however, they must be registered prior to and reported at the time of import. Initial registration does not need to include an efficiency report, or any of the electrical parameters that would be required for production hardware. See the reporting requirements above for EPSs, the required elements for Replacement EPSs would include items (a) through (d) and (i) through (k).

#### 2.11.4.3 Requirements for Korea

#### **Definitions**

**Adapter** – A single voltage external power supply (AC-DC or AC-AC) under 150 W (nameplate output power) without any charging function.

**Charger** – Single voltage external power supply (AC-DC) with charging function to charge a lithium ion battery and has an input of 20W.

#### **Requirements**

Adapters (external power supply without charging) shall meet the requirements found in the table below.

Table 27. Minimum Energy Performance Standards for Adapters		
Minimum Energy Performance Standards (MEPS)		
Output power on name Running Efficiency		
plate (Pno)	(On mode energy	
	efficiency)	
$0 < P_{no} < 1W$	$>0.49 \text{ x P}_{no}$	
$1W < P_{no} < 49W$	$>[0.09 \text{ x Ln } (P_{no})] + 0.49$	
49W <p<sub>no&lt;150W</p<sub>	>0.84	

Output power on name plate (Pno)	Maximum Standby Power (Power consumption on No-Load Mode)
$0 < P_{no} < 10W$	<0.5W
$10W < P_{no} < 150W$	<0.75W

Chargers (external power supply with charging function to charge Li-Ion Battery) must meet the requirements found in the table below.

Table 28. Minimum Energy Performance Standards for Chargers		
Minimum Energy Performance Standards (MEPS)		
$0 < P_{in} < 10W$ $< 0.5W$		
10W <p<sub>in&lt;20W</p<sub>	<0.75W	

Adapters and Chargers must be tested and labeled in accordance with the Korean Regulation on Energy Efficiency Labeling and Standards, July 31, 2008. The required label is in the Figure below. The label shall be on the front or top of the product. Please note that "ABC-12345" represents the model number of the external power supply. If the model number is already shown on the unit, then the line text with the model number can be eliminated on this label. The KC mark does not need to be right next to the Korean text but does need to be on the front or top of the unit.

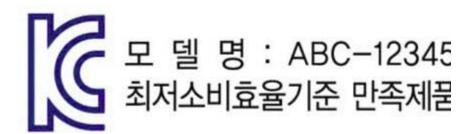

Figure 14. Korea Energy Label for Adapters and Chargers.

#### 2.11.4.4 Requirements for the EU and Switzerland (Lot 7)

European Union Commission Regulation EC No 278/2009 of 6 April 2009 implementing Directive 2005/32/EC with regard to ecodesign requirements for no-load condition electric power consumption and average active efficiency of external power supplies. This Regulation (EC) No 278/2009 is repealed on 1 April 2020. Commission Regulation (EU) 2019/1782 of 1 October 2019 laying down ecodesign requirements for external power supplies pursuant to Directive 2009/125/EC.

The section applies to external power supplies (EPSs) irrespective of the EMC classification of A or B. This section does not apply to uninterruptable power supplies (UPSs).

#### **Definitions**

#### This definition below no longer applies after April 1, 2020.

External power supply - device which meets all of the following criteria:

- 1. It is designed to convert alternating current (AC) power input from the mains power source into lower voltage direct current (DC) or AC output;
- 2. It is able to convert to only one DC or AC output voltage at a time;
- 3. It is intended to be used with a separate device that constitutes the primary load;
- 4. It is contained in a physical enclosure separate from the device that constitutes the primary load;

- 5. It is connected to the device that constitutes the primary load via a removable or hard-wired male/female electrical connection, cable, cord or other wiring;
- 6. It has nameplate output power not exceeding 250 Watts;
- 7. It is intended for use with electrical and electronic household and office equipment as referred to in EU Regulation (EC) No 1275/ 2008 Article 2(1).

#### This definition below is effective April 1, 2020.

External power supply means a device which meets all of the following criteria:

- a) it is designed to convert alternating current (AC) power input from the mains power source input into one or more lower voltage direct current (DC) or AC outputs;
- b) it is used with one or more separate devices that constitute the primary load;
- c) it is contained in a physical enclosure separate from the device or devices that constitute the primary load;
- d) it is connected to the device or devices that constitute the primary load with removable or hard-wired male/female electrical connections, cables, cords or other wirings;
- e) it has nameplate output power not exceeding 250 watts; and it is used with electrical and electronic household and office equipment included in Annex I; such as Information technology equipment, including copying and printing equipment, and set-top boxes, intended primarily for use in the domestic environment. See EU regulation for more definitions, details and product scope information.

**Domestic environment** means an environment where the use of broadcast radio and television receivers may be expected within a distance of 10 m of the equipment concerned.

**Information technology equipment** means any equipment which has a primary function of either entry, storage, display, retrieval, transmission, processing, switching, or control, of data or of telecommunication messages or a combination of these functions and may be equipped with one or more terminal ports typically operated for information transfer.

**Mains** means the electricity supply from the grid of 230 ( $\pm$  10 %) volts of alternating current at 50 Hz.

#### Requirements

External power supplies must meet the following requirements (effective April 2010):

- 1. The no-load condition power consumption shall not exceed 0.50 W
- 2. The average active efficiency shall be not less than:
- a.  $0.500 * P_O$ , for  $P_O < 1.0 W$ ;
- b.  $0.090 * Ln(P_O) + 0.500$ , for  $1.0 W < P_O < 51.0 W$ ;
- c. 0.850 for  $P_0 > 51.0$  W.
- 1. The no-load condition power consumption shall not exceed the following limits (effective April 2011):

	except low voltage EPSs	except low voltage EPSs	
$P_{\rm O} < 51.0 \; {\rm W}$	0.50 W	0.30 W	0.30 W
$P_{\rm O} > 51.0 \; {\rm W}$	0.50 W	0.50 W	Not Applicable

2. The average active efficiency shall be not less than the following limits:

	AC-AC and AC-DC EPSs, except low voltage EPSs	Low voltage EPSs
$P_{O} < 1.0 \text{ W}$	$0.480 \times P_{O} + 0.140$	$0.497 \times P_{O} + 0.067$
$1.0 \text{ W} < P_0 < 51.0 \text{ W}$	$0.0626 \text{ x Ln}(P_0) + 0.622$	$0.075 \times Ln(P_0) + 0.561$
$P_{\rm O} > 51.0 \; {\rm W}$	0.870	0.860

External power supplies must meet the following requirements (effective April 1 2020):

#### Ecodesign requirements for external power supplies

#### 1. Energy efficiency requirements:

(a) from 1 April 2020, the no-load condition power consumption shall not exceed the following values:

	AC-AC external power supplies, except low voltage and multiple voltage output external power supplies	AC-DC external power supplies, except low voltage and multiple voltage output external power supplies	Low voltage external power supplies	Multiple voltage output external power supplies
$P_{\rm O} \leq 49,0~{ m W}$	0,21 W	0,10 W	0,10 W	0,30 W
$P_{\rm O} > 49,0~{ m W}$	0,21 W	0,21 W	0,21 W	0,30 W

(b) from 1 April 2020, the average active efficiency shall be not less than the following values:

	AC-AC external power supplies, except low voltage and multiple voltage output external power supplies	AC-DC external power supplies, except low voltage and multiple voltage output external power supplies	Low voltage external power supplies	Multiple voltage output external power supplies
$P_{\rm O} \le 1.0 \; {\rm W}$	$0.5 \times P_{O}/1W + 0.160$	$0.5 \times P_{O}/1W + 0.160$	0,517 × P <sub>O</sub> /1W+ 0,087	0,497 × P <sub>O</sub> /1W+ 0,067
$1 \text{ W} \le P_{O} \le 49,0 \text{ W}$	0,071 × ln(P <sub>O</sub> /1W) – 0,0014 × P <sub>O</sub> /1W+ 0,67	0,071 × ln(P <sub>O</sub> /1W) - 0,0014 × P <sub>O</sub> /1W+ 0,67	0,0834 × ln(P <sub>O</sub> /1W) - 0,0014 × Po/1W+ 0,609	0,075 × ln(P <sub>O</sub> / 1W) + 0,561
P <sub>O</sub> > 49,0 W	0,880	0,880	0,870	0,860

The product must be marked with the CE conformity marking. See Figure 13. The CE mark must have a height of at least 5 mm. The CE marking must be affixed to the EPS. Where this is not possible, it must be affixed to the packaging and to the accompanying documents.

The following technical documents must be provided to Lenovo:

- 1. Declaration of Conformity (DoC) to EU Regulation 1275/2008 as required by EU Directive 2005/32/EC. The DoC must include:
- i. Name and address of the manufacturer or of its authorized representative;
- ii. A description of the model sufficient for unambiguous identification;
- iii. Where appropriate, the references of the harmonized standards applied;
- iv. Where appropriate, the other technical standards and specifications used;
- v. Where appropriate, the reference to other EU Community legislation providing for the affixing of the CE mark that is applied;
- vi. Identification and signature of the person empowered to bind the manufacturer or its authorized representative.
- 2. The technical documentation showing efficiency data must be provided. The technical documentation must meet the requirements of Annexes I and II of EU Commission Regulation No 278/2009 and Switzerland Energy Regulation Appendix 2:11.

EPSs which are packaged as service or spare parts must clearly indicate the primary load product for which the EPS is intended to be used with.

#### 2.11.4.5 Requirements for China

External Power Supplies shall meet the energy efficiency requirements of Sections 4.1 in the National Standard of the People's Republic of China GB 20943-2013. This standard is applicable to product with rated output power lower than or equal to 250W. This standard is NOT applicable to product used for industrial equipment, medical device and others with special functions.

#### **Energy Efficiency Requirements**

External Power Supplies manufactured after Sep. 1<sup>st</sup>, 2014 must meet table 28's and table 29's requirements of the National Standard of the People's Republic of China GB 20943-2013. See table 28 and table 29 in this section.

Table 29. Minimum Average Energy Efficiency Requirements for EPS

Rated Power	<b>Product Classification</b>	Minimum Average Efficiency
$0 < P_O \le 1W$	Rated Voltage < 6V and Rated Current≥550mA	0.497 x P <sub>O</sub> + 0.067
	Others	$0.480 \times P_{O} + 0.140$

$1W < P_O \le 49W$	Rated Voltage < 6V and Rated Current≥550mA	$0.0750 \text{ x Ln}(P_0) + 0.561$
	Others	$0.0626 \text{ x Ln}(P_0) + 0.622$
	Rated Voltage < 6V and Rated	0.96
$49 < P_O \le 250W$	Current≥550mA	0.86
	Others	0.87

Table 30. Minimum Average Energy Efficiency Requirements of No-Load model for EPS

Rated Power	No load power	
$0 < P_{O} < 50W$	AC output	0.5
	DC output	0.3
$50W \le P_O \le 250W$	0.5	

## **2.11.4.6** Battery Chargers (including Battery Back-up Units and Uninterruptible Power Supplies)

#### Requirements for California, Oregon, Canada and British Columbia References

Notice from NRCan for Energy Efficiency Regulations

British Columbia Energy Efficiency Act, Standards for Small Battery Charging Systems British Columbia Regulatory Bulletin Energy Efficiency Standards Regulation Amendment March 2018

#### **Battery Chargers: California**

The California Appliance Efficiency Regulations (California Code of Regulations [CCR], Title 20, Sections 1601 to 1609) contain definitions, test methods, energy efficiency standards, certification requirements, and marking requirements for state-regulated battery charger systems and federally regulated battery chargers. The California Energy Commission has modified these regulations to align the state requirements with the U.S. Department of Energy's requirements for these products. (See <a href="Docket #18-AAER-02">Docket #18-AAER-02</a> [Appliance Efficiency Standards Rulemaking for Portable Electric Spas and Battery Chargers]; <a href="Docket #18-AAER-10">Docket #18-AAER-10</a> [Amendments to Title 20 Appliance Efficiency Regulations Rulemaking].)

This regulatory advisory applies to two types of products:

- 1. Federally regulated battery chargers are battery chargers manufactured on or after June 13, 2018, to which a federal efficiency standard applies. A federally regulated battery charger is defined as, "a device that charges batteries for consumer products, including battery chargers embedded in other consumer products." (10 C.F.R. § 430.2; see also 10 C.F.R. § 430.32(z) for efficiency standards.) Examples include cell phone battery chargers, electric toothbrush battery chargers (wet-inductive), and power tool battery chargers. Under federal law, the date of manufacture means either the date of manufacture if manufactured in the United States, or the date of import into the United States.(10 C.F.R. § 430.2, definition of "manufacture.")
- 2. State-regulated small battery charger systems are products meeting California's definition for a "small battery charger system" and that are not federally regulated battery chargers. Examples include forklift battery chargers, dry-inductive battery chargers, and battery chargers for nonconsumer products. Small battery charger systems are defined in Section 1602(w) of Title 20 of the CCR. This regulatory advisory is not applicable to state-regulated battery charger systems that are battery backups or non-federally regulated uninterruptible power supplies.

Manufacturers may voluntarily certify federally regulated battery chargers to MAEDbS using the new appliance sub-type on or after June 13, 2018.

Beginning January 1, 2019, all federally regulated battery chargers must appear in MAEDbS to be lawful for sale or offer for sale in California. Products not included in the federal scope that meet the definition of a battery charger system will remain regulated as state-regulated battery charger systems and may be referred for enforcement if they are not certified to MAEDbS.

See California Energy Commission Appliance Efficiency Regulations for more details, including further definitions and effective dates. Web site is at <a href="http://www.energy.ca.gov/appliances/">http://www.energy.ca.gov/appliances/</a>. Some effective dates are referenced later in this section.

#### **Definitions**

À la carte charger means a battery charger that is individually packaged without batteries. À la carte chargers include those with multi - voltage or multi - port capability.

**Battery or battery pack** means an assembly of one or more rechargeable cells intended to provide electrical energy to a product, and may be in one of the following forms: (a) detachable battery: a battery that is contained in a separate enclosure from the product and is intended to be removed or disconnected from the product for recharging; or (b) integral battery: a battery that is contained within the product and is not removed from the product for charging purposes.

**Battery backup or uninterruptible power supply charger (UPS)** means a small battery charger system that is voltage and frequency dependent (VFD) and designed to provide power to an end use

product in the event of a power outage, and includes a UPS as defined in IEC 62040 - 3 ed.2.0. The output of the VFD upon which the UPS is dependent changes in AC input voltage and frequency and is not intended to provide additional corrective functions, such as those relating to the use of tapped transformers.

**Battery charger system (BCS)** means a battery charger coupled with its batteries or battery chargers coupled with their batteries, which together are referred to as battery charger systems. This term covers all rechargeable batteries or devices incorporating a rechargeable battery and the chargers used with them. Battery charger systems include, but are not limited to:

- 1) electronic devices with a battery that are normally charged from ac line voltage or dc input voltage through an internal or external power supply and a dedicated battery charger;
- 2) the battery and battery charger components of devices that are designed to run on battery power during part or all of their operations;
- 3) dedicated battery systems primarily designed for electrical or emergency backup; and
- 4) devices whose primary function is to charge batteries, along with the batteries they are designed to charge. These units include chargers for power tool batteries and chargers for automotive, AA, AAA, C, D, or 9 V rechargeable batteries, as well as chargers for batteries used in larger industrial motive equipment and à la carte chargers. The charging circuitry of battery charger systems may or may not be located within the housing of the end-use device itself. In many cases, the battery may be charged with a dedicated external charger and power supply combination that is separate from the device that runs on power from the battery.

#### Except those:

- 1) used to charge a motor vehicle that is powered by an electric motor drawing current from rechargeable storage batteries, fuel cells, or other portable sources of electrical current, and which may include a nonelectrical source of power designed to charge batteries and components thereof. This exception does not apply to autoettes, electric personal assistive mobility devices, golf carts, or low speed vehicles, as those vehicles are defined in Division 1 of the California Vehicle Code;
- 2) that are classified as Class II or Class III devices for human use under the Federal Food, Drug, and Cosmetic Act and require U.S. Food and Drug Administration listing and approval as a medical device:
- 3) used to charge a battery or batteries in an illuminated exit sign, as defined in Section 1602(1);
- 4) with input that is three phase of line to line 300 volts root mean square or more and is designed for a stationary power application;
- 5) that are battery analyzers; or
- 6) that are voltage independent or voltage and frequency independent uninterruptible power supplies (UPS) as defined by International Electrotechnical Commission (IEC) 62040 3 ed.2.0.

**Inductive charger system** means a small battery charger system that transfers power to the charger through magnetic or electric induction.

28June2020 Page 100 of 190 Version 7.8

**Large battery charger system** means a battery charger system (other than a battery charger system for golf carts) with a rated input power of more than 2 kW.

**Small battery charger system** means a battery charger system with a rated input power of 2 kW or less, and includes golf cart battery charger systems regardless of the output power.

**USB charger system** means a small battery charger system that uses a Universal Serial Bus (USB) connector as the only power source to charge the battery, and is packaged with an external power supply rated with a voltage output of 5 volts and a power output of 15 watts or less.

#### **Definitions (Canada)**

**Backup battery charger** means a device that (a) is incorporated into an end-use product, including a device that is incorporated into an uninterruptible power supply or that uses an external power supply, that is designed to operate continuously using mains power; and (b) recharges a battery that is used to maintain the continuity of electrical power to the end use product such that the product can continue its full or partial operation in the event of a failure of mains power.

**Battery charger** means a device that charges the battery of a wheelchair, golf cart, low speed vehicle or any other end-use product. It does not include any of the following:

- (a) a device that charges the battery of a vehicle other than a wheelchair, golf cart or low speed vehicle;
- (b) a device that charges the battery of a medical device;
- (c) a wireless battery charger, other than a wireless battery charger that is inductive and designed for wet environments; or
- (d) a backup battery charger.

**Battery Charger** is a device that charges batteries for consumer products, including battery chargers embedded in other consumer products. [Source: CSA C381.2-17 Energy Performance of battery-charging systems and uninterruptible power supplies]

#### **Requirements**

Large Battery Charger Systems manufactured on or after January 1, 2014 shall meet the performance values in:

- 1. Table W-1 of the CEC Appliance Energy Regulation.
- 2. ORS 469.233 Section 10, chapter 418, 19(a), updated 2015.

## Table W - 1 Standards for Large Battery Charger Systems

Performance Parameter	Standard
	1

Charge Return Factor (CRF)	100 percent, 80 percent Depth of discharge	CRF≤ 1.10
	40 percent Depth of discharge	CRF ≤ 1.15
Power Conversion Efficiency		Greater than or equal to: 89 percent
Power Factor		Greater than or equal to: 0.90
Maintenance Mode Power (Eb = battery capacity of tested battery)		Less than or equal to: 10 + 0.0012Eb W
No Battery Mode Power		Less than or equal to: 10 W

The following Small Battery Charger Systems shall meet the applicable performance values in Table W-2 of the California Energy Commission Appliance Efficiency Regulations:

- consumer products that are not USB charger systems with a battery capacity of 20 watt hours or more, and are manufactured on or after February 1, 2013;
- consumer products that are USB charger systems with a battery capacity of 20 watt hours or more and are manufactured on or after January 1, 2014; and
- those that are not consumer products and are manufactured on or after January 1, 2017.

Exceptions to these Small Battery Charger requirements are à la carte charger that are:

- a) provided separately from and subsequent to the sale of a small battery charger system manufactured before the effective date of the applicable standard in Section 1605.3(w)(2);
- b) necessary as a replacement for, or as a replacement component of, such small battery charger system;
- c) is provided by a manufacturer directly to a consumer or to a service or repair facility; and is manufactured no more than five years after the effective date in Section 1605.3(w)(2) applicable to the particular small battery charger system for which the à la carte charger is intended as a replacement or replacement component. These chargers shall not be required to meet the applicable standard in Section 1605.3(w)(2) and Table W 2.14 of the California regulations.

Table W - 2 Standards for Small Battery Charger Systems

Performance Parameter	Standard
Maximum 24 hour charge and maintenance energy (Wh)	For Eb of 2.5 Wh or less: $16 \times N$
(Eb = capacity of all batteries in ports and N =	For Eb greater than 2.5 Wh and less than or equal to

number of charger ports)	100 Wh: 12 x N +1.6Eb
	For Eb greater than 100 Wh and less than or equal to 1000 Wh: 22 x N+1.5Eb
	For Eb greater than 1000 Wh: 36.4 x N +1.486Eb
Maintenance Mode Power and No Battery Mode Power (W)	The sum of maintenance mode power and no battery mode power must be less than or equal to:
(Eb = capacity of all batteries in ports and N = number of charger ports)	1x N+0.0021xEb Watts

Inductive charger systems manufactured on or after February 1, 2013, shall meet either the applicable performance standards in Table W-2 or shall use less than 1 watt in maintenance mode, less than 1 watt in no battery mode, and an average of 1 watt or less over the duration of the charge and maintenance mode test.

Battery Backup and Uninterruptible Power Supplies manufactured on or after February 1, 2013, for consumer products and January 1, 2017, for products that are not consumer products shall consume no more than 0.8+0.0021 x Eb watts in maintenance mode where Eb is the battery capacity in watt - hours.

The appliances must be tested in accordance with Sections 1603 and 1604 of the California Energy Commission Appliance Efficiency Regulations at an approved test laboratory or an approved industry certification program.

Battery chargers in scope of these requirements must be certified in the California Energy Commission's Modernized Appliance Efficiency Database System (MAEDBS). In Docket #18-AAER-02, the Energy Commission adopted regulatory changes to modify the marking requirements for battery chargers to require that only state-regulated battery charger systems be marked with a "BC" inside of a circle. Federally regulated battery chargers become covered by the U.S. Department of Energy on June 13, 2018; however, the Energy Commission anticipates that the changes to the California regulations will not take effect until October 1, 2018, after they are approved by the Office of Administrative Law. Therefore, Energy Commission staff will not refer for enforcement federally regulated battery chargers manufactured on or after June 13, 2018, that are not marked with a (BC).

State-regulated battery charger systems must continue to comply with the requirement to mark the device with a "BC" inside of a circle, as required under Section 1607(d)(10) of Title 20 of the CCR.

28June2020 Page 103 of 190 Version 7.8

For British Columbia (BC): Products manufactured on or after June 2, 2018, are exempt from the energy efficiency verification label requirement including verification by the designated tester that the product meets the efficiency standard. The label exemption allows products which are compliant with the US Department of Energy (DOE) standards to be imported into BC without additional third-party testing. The BC energy device categories (product classes) and corresponding efficiency standard (maximum Unit Energy Consumption) are aligned with the US DOE battery charger standard (10 CFR 430.32 (z)). The testing procedure for all product categories is CSA C381.2-17 which is aligned with the U.S. DOE test standard (US CFR Title 10, Part 430, Subpart B, Appendix Y).

For Canada (requirements apply to battery chargers manufactured on or after June 13, 2019):

A battery charger must have a unit energy consumption (UEC) that is less than or equal to that set out for the battery charger's product class in Table C.1 of CSA C381.2-17. Canada has adopted the definition for battery chargers as listed in CSA C381.2-17. See definition above.

Information, as listed in the Canada Energy Regulation must be submitted to the respective Canadian minister –

- a) its product class;
- b) its rated battery energy (E), expressed in watt-hours;
- c) its unit energy consumption expressed in kilowatt-hours per year;
- d) its power, expressed in watts, when it is in active mode, maintenance mode and standby mode, respectively; and
- e) if an external power supply was used to test the battery charger, the power supply's model number and the name of its manufacturer

#### Labeling

The labeling and marking requirements apply to all products that are within the scope of the adopted regulation. The requirements are that the marking be legible and permanently affixed. There are no specific size, font, or color requirements as long as the marking is legible. An example of an acceptable mark is shown below:

Placement of the mark should go either on the product (i.e., nameplate) or the product packaging and the front page of the publication.

Effective dates of this regulation vary, please see regulation for details. <a href="https://www.energy.ca.gov/appliances/documents/2018-06-07">https://www.energy.ca.gov/appliances/documents/2018-06-07</a> Battery Chargers Advisory.pdf

#### Requirements for Battery Chargers for USA (US DOE) References

US 10 CFR Part 430 Energy Conservation Standards for Battery Chargers See regulations for additional definitions, requirements, effective dates, and updates. https://www.regulations.gov/document?D=EERE-2008-BT-STD-0005-0256

#### **Definitions**

**Battery charger** means a device that charges batteries for consumer products, including battery chargers embedded in other consumer products.

**Consumer product** means any article (other than an automobile, as defined in Section 501(1) of the Motor Vehicle Information and Cost Savings Act):

- (1) Of a type—
  - (i) Which in operation consumes, or is designed to consume, energy or, with respect to showerheads, faucets, water closets, and urinals, water; and
  - (ii) Which, to any significant extent, is distributed in commerce for personal use or consumption by individuals;
- (2) Without regard to whether such article of such type is in fact distributed in commerce for personal use or consumption by an individual, except that such term includes fluorescent lamp ballasts, general service fluorescent lamps, incandescent reflector lamps, showerheads, faucets, water closets, and urinals distributed in commerce for personal or commercial use or consumption.

#### **Requirements**

Battery chargers manufactured on or after June 13, 2018, must have a unit energy consumption (UEC) less than or equal to the prescribed "Maximum UEC" standard when using the equations for the appropriate product class and corresponding rated battery energy as shown in the following table:

	DOE § 430.32(z)(1) <sup>7</sup>			
[PC]	Product Class ("PC") Description	Rated Battery Energy (Ebatt**)	Special Characterist ic or Battery Voltage	Maximum UEC (kWh/yr) (as a function of Ebatt**)
1	Low-Energy	≤ 5 Wh	Inductive Connection*	3.04
2	Low-Energy, Low-Voltage		< 4 V	.1440 * Ebatt + 2.95
3	Low-Energy, Medium-Voltage	< 100 Wh	4-10 V	For Ebatt < 10 Wh, 1.42 kWh/y Ebatt ≥ 10 Wh, .0255 * Ebatt + 1.16
4	Low-Energy, High-Voltage		> 10 V	.11 * Ebatt + 3.18
5	Medium-Energy, Low Voltage	100 – 3000 Wh	< 20 V	.0257 * Ebatt + .815
6	Medium-Energy, High- Voltage	100 – 3000 Wh	≥ 20 V	.0778 * Ebatt + 2.4
7	High Energy	> 3000 Wh	-	.0502 * Ebatt + 4.53

## Requirements for Uninterruptible Power Supplies for Colorado, Washington and USA References

Colorado Revised Statutes Article 7.5 Water and Energy Efficiency Standards Washington An Act relating to appliance efficiency standards

US 10 CFR Part 430 Subpart B Appendix Y Uniform Test Method for Measuring the Energy Consumption of Battery Chargers

US 10 CFR Part 430 Energy Conservation Standards for Uninterruptible Power Supplies (prepublication final rule)

US CFR Part 430.32 Energy and water conservation standards and their compliance dates

#### **Definitions**

**Uninterruptible Power Supply (UPS):** a battery charger consisting of a combination of convertors, switches and energy storage devices (such as batteries), constituting a power system for maintaining continuity of load power in case of input power failure.

**Voltage and frequency dependent UPS or VFD UPS:** a UPS that produces an AC output where the output voltage and frequency are dependent on the input voltage and frequency. This UPS architecture does not provide corrective functions like those in voltage independent and voltage and frequency independent systems.

**Voltage and frequency independent UPS or VFI UPS:** a UPS where the device remains in normal mode producing an AC output voltage and frequency that is independent of input voltage and

frequency variations and protects the load against adverse effects from such variations without depleting the stored energy source.

**Voltage independent UPS or VI UPS:** a UPS that produces an AC output within a specific tolerance band that is independent of under-voltage or over-voltage variations in the input voltage without depleting the stored energy source. The output frequency of a VI UPS is dependent on the input frequency, similar to a voltage and frequency dependent system.

#### Requirements

UPSs that utilize a National Electrical Manufacturer Association (NEMA) 1-15P or 5-15P input plug and have an AC output shall have an average load adjusted efficiency that meets or exceeds the values shown in the table below based on the rated output power (Prated) of the UPS, as measured in accordance with test procedures prescribed in Appendix Y to Subpart B of Part 430 of Title 10 of the Code of Federal Regulations "Uniform Test Method for Measuring the Energy Consumption of Battery Chargers" in effect as of January 11, 2017.

Battery charger product class	Rated output power	Minimum efficiency
10a (VFD UPSs)	0 W < Prated ≤ 300 W	-1.20E-06 * P2rated + 7.17E-04 * Prated + 0.862.
	300 W < Prated ≤ 700 W	-7.85E-08 * P2rated + 1.01E-04 * Prated + 0.946.
	Prated > 700 W	-7.23E-09 * P2rated + 7.52E-06 * Prated + 0.977.
10b (VI UPSs)	0 W < Prated ≤ 300 W	-1.20E-06 * P2rated + 7.19E-04 * Prated + 0.863.
	300 W < Prated ≤ 700 W	-7.67E-08 * P2rated + 1.05E-04 * Prated + 0.947.
	Prated > 700 W	-4.62E-09 * P2rated + 8.54E-06 * Prated + 0.979.
10c (VFI UPSs)	0 W < Prated ≤ 300 W	-3.13E-06 * P2rated + 1.96E-03 * Prated + 0.543.
	300 W < Prated ≤ 700 W	-2.60E-07 * P2rated + 3.65E-04 * Prated + 0.764.
	Prated > 700 W	-1.70E-08 * P2rated + 3.85E-05 * Prated + 0.876.

#### 2.11.5 Requirements for Austrailia and New Zealand

#### 2.11.5.1 Minimum Energy Performance Standards: Computer and Monitors

Minimum Energy Performance Standards (MEPS) for computers and Monitors will be implemented on October 1, 2013 in Australia and New Zealand.

Computers and Monitors must be registered on www.energyrating.gov.au before they are available for sale.

#### **2.11.5.1.1** Computers

#### **Requirements for computers**

Computers must meet the requirements of the Standard AS/NZS 5813.2 and must be tested to the Standard AS/NZS 5813.1.

Standards can be purchased from www.standards.co.nz and www.saiglobal.com.

Non-compliant computer stock imported into, or manufactured in Australia and New Zealand before October 1, 2013 may continue to be sold. Second-hand sales are not covered by the Regulations.

The MEPS will cover all computers that are imported or manufactured in New Zealand for sale or hire, including:

- desktop computers
- notebooks
- small scale servers.

The following computers do not need to comply with MEPS:

- personal digital assistants (PDAs)
- palmtop computers and smartphones
- games consoles
- blade, slate or thin client computers
- workstations
- computers that are not connected to mains voltage or by external power supply.

#### Alternative requirements for small production runs

There will be "deemed-to-comply" provisions for computer models where less than 200 units are manufactured per year. The model must be registered on the energy rating website. However it will be exempt from typical energy consumption (TEC) requirements if it uses an internal power supply that meets the standard below, or an external power meeting the requirements of energy performance mark V.

AS/NZS 5814.1:2012 sets out Method of Measurement for internal power supplies.

AS/NZS 4665.1:2005 sets out the test method and energy performance mark for external power supplies.

There is no requirement to register the internal power supply, however it must qualify as an internal power supply that meets or exceeds:

85 per cent efficiency when tested at 20 per cent of rated power;

88 per cent efficiency when tested at 50 per cent of rated power;

85 per cent efficiency when tested at 100 per cent of rated power; and

power factor of 0.9 when tested at 100 per cent of rated power.

#### Labeling

There are no labeling requirements for computers.

#### How to register

All computers manufactured in or imported on or after October 1, 2013 must be registered.

More information on registering a computer is available at: www.energyrating.gov.au/programs/e3-program/energy-rating-labelling/submit/

A test report is not required to be submitted as part of the registration process. However, manufacturers or importers are required to provide a copy of the test report to the Regulator on request. For this reason it is recommended that an electronic copy of the test report be uploaded when making a registration application.

Instructions on the use of the on-line registration system are available at: <a href="https://www.energyrating.gov.au/resources/program-publications/?viewPublicationID=2139">www.energyrating.gov.au/resources/program-publications/?viewPublicationID=2139</a>

### 2.11.5.1.2 Monitors

#### References

Australia Greenhouse and Energy Minimum Standards Act 2012

Australia Greenhouse and Energy Minimum Standards (Computer Monitors) Determination 2013 Computer Monitors Information Sheet from the New Zealand Energy Efficiency and Conservation Authority September 2019

Additional information for this program can be found at <a href="https://www.energyrating.gov.au/">https://www.energyrating.gov.au/</a> and <a href="https://www.energyrating.gov.au/">https://www.ene

Standards can be purchased from www.standards.co.nz or www.saiglobal.com.

The standards are intended to cover all computer monitors that are imported or manufactured in Australia and New Zealand for sale or hire, that are up to 152 cm (measured diagonally across).

### **Requirements for Monitors**

Computer monitors must meet the minimum energy performance standards (MEPS) and energy rating label requirements as found in AS/NZS 5815.1:2013 and AS/NZS 5815.2:2013. There are multiple displays which these standards do not apply to, for example, specialized electronic displays intended for use primarily in commercial and professional fields, not intended for sale to the general public. Also excluded are displays which are built-in or have integrated networking functionality, the circuitry for which cannot be physically separated or switched independently from the electronic display component. Rack mount monitors are excluded from these requirements.

Computer monitors are required to have the six star, or ten star label affixed to the product, as outlined in Section 26 of the Greenhouse and Energy Minimum Standards Act 2012 and section 7 of the Greenhouse and Energy Minimum Standards (Computer Monitors) determination 2013. The label may also be placed on the packaging. The format of the labels is in Schedule 1 and Schedule 2 of the Greenhouse and Energy Minimum Standards (Computer Monitors) Determination 2013.

#### Labeling

Monitors up to 76 cm across must comply with MEPS (in on-mode) and labeling.

Larger monitors (between 76 cm and 152 cm across) only need to display an energy rating label and meet standby levels (1W when off, 2W on standby).

\* Electronic labelling (where the energy rating label appears as an image on the screen or in a video loop) is allowed but must be approved by the regulator.

The following monitors will not need to comply with MEPS and labeling:

- Monitors larger than 152 cm across.
- Products with an integrated television tuner are classified as televisions and are already subject to MEPS and labelling.
- Electronic displays used exclusively for digital signage, advertising or digital picture frames.
- High performance or specialised electronic displays.
- Displays used in public settings.

### How to register

All monitors manufactured in or imported on or after October 1, 2013 must be registered and be supplies with an energy rating label.

More information on registering a monitor is available at: www.energyrating.gov.au/programs/e3-program/energy-rating-labelling/submit/

A test report is not required to be submitted as part of the registration process. However, manufacturers or importers are required to provide a copy of the test report to the Regulator on request. For this reason it is recommended that an electronic copy of the test report be uploaded when making a registration application.

Instructions on the use of the on-line registration system are available at: <a href="https://www.energyrating.gov.au/resources/program-publications/?viewPublicationID=2139">www.energyrating.gov.au/resources/program-publications/?viewPublicationID=2139</a>

### 2.11.6 Requirements for Mexico

### 2.11.6.1 Computers, Small Scale Servers, Servers, Storage Products, and peripherals

### Requirements

Equipment and Appliances must contain, in a clear and visible manner, basic information (in Spanish) regarding:

- 1. The energy consumption per unit of time in operation;
- 2. The energy consumption in standby mode, per unit of time, if applicable.
- 3. The type of energy or power used, which should indicate the measurement units, unless by its operational nature, the type of power or energy is evidently identifiable, in which case it will not be necessary to include this requirement on the labeling;

4. Quantity of the good, product or service offered by the equipment per unit of energy consumed when applicable.

The manufacturer must submit the forms found in the Mexico Catalog of the Equipment and Apparatus for which the manufacturers, importers, distributors and sellers should provide information about power consumption and forms for providing information to the Mexico National Commission for Efficient Energy Use (CONUEE). A copy of this form must be supplied to Lenovo.

Products which do not meet the definition of Specialized products must be labeled (in Spanish) with the above energy consumption and quantity of service provided per unit of energy consumed.

#### **Definitions**

**Equipment and Appliances** means products cited in the Mexico Catalog of Equipment and Appliances, for which Manufacturers, Importers, Distributors and Marketers, must include information regarding their energy consumption.

**Specialized products** means equipment, spare parts, accessories and additions, that are not sold to the general public, but to a specific client due to its level of technical specialization, and which are set up considering the requirements and specifications of the customer; in addition, the entities requiring this kind of equipment shall previously get from their supplier(s) the features of any such equipment, including energy consumption.

### 2.11.6.2 EPS efficiency and labeling requirements (NOM 029-ENER-2017)

#### Scope

Covers external power supplies that are sold in the Mexican market by converting AC voltage to a single fixed DC voltage (or allowing the user to manually select different output voltages) with a maximum output power of 250W as a separate product or component of the end product.

### Requirements

Must comply with the energy efficiency values for the active power mode and not surpass the power values in no-load mode, as indicated in the table below:

Classification according to the level of output voltage	Nominal output voltage in DC	With an output power (P <sub>o</sub> )	Efficiency Level	Minimum energy efficiency level in active mode, greater than or equal to:	The maximum power limit in no-load mode, less than or equal to:
			٧	0.497 x P <sub>o</sub> + 0.067	0.30

		Less than or equal to 1.0 W	VI	0.517 x P <sub>o</sub> + 0.087	0.10
USB output	5.0 V ± 0.25 V	Greater than 1.0 W and	V	0.075 x [L <sub>n</sub> (P <sub>o</sub> )] + 0.561	0.30
voltage	0.0 1 2 0.20 1	less than or equal to 49.0	VI	0.0834 x [L <sub>n</sub> (P <sub>o</sub> )] - 0.0014 x P <sub>o</sub> + 0.609	0.10
		Greater than 49.0 W and	V	0.86	0.50
		less than or equal to 250.0 W	VI	0.87	0.21
_		Less than or equal to1.0 W	V	0.497 x P <sub>o</sub> + 0.067	0.30
		Less than or equal to 1.0 w	VI	0.517 x P <sub>o</sub> + 0.087	0.10
Low output	Less than 6.0 V	Greater than 1.0 W less than or equal to 49.0 W  Greater than 49.0 W and	V	0.075 x [L <sub>n</sub> (P <sub>o</sub> )] + 0.561	0.30
voltage			VI	0.0834 x [L <sub>n</sub> (P <sub>o</sub> )] - 0.0014 x Po + 0.609	0.10
			V	0.86	0.50
		less than or equal to 250.0 W	VI	0.87	0.21
		Loop then or equal to 1.0 W	V	0.480 x P <sub>o</sub> + 0.140	0.30
		Less than or equal to 1.0 W	VI	0.5 x P <sub>o</sub> + 0.16	0.10
Generic	Greater than or	Greater than 1.0 W less	V	$0.0626 \times [L_n (P_o)] + 0.622$	0.30
output voltage	equal to 6.0 V	than or equal to 49.0 W	VI	0.071 x (L <sub>n</sub> (P <sub>o</sub> )) - 0.0014 x Po + 0.67	0.10
	Greater th	Greater than 49.0 W and	V	0.87	0.50
		less than or equal to 250.0 W	VI	0.88	0.21

#### **Marking**

All external power supplies in scope of the Mexican Official Standard must be marked on the body of the product or with a legible and indelible data plate with the data listed below. It must be adhered or mechanically attached to the enclosure or housing on the main body of the external power supply in a visible place. The minimum information that the marking of the external power supply must have is:

- Name of the manufacturer or distributor, or a logo or registered trademark;
- Model or commercial identification designated by the manufacturer or distributor and used for commercial identification;
- Electrical data, nominal input voltage, and frequency.
- Marking of energy efficiency level V or VI, in roman numbers; (as appropriate);
- Nominal electrical data of the electrical output voltage, electrical power and/or the electric current output intensity.

The mark must be indelible and legible after manual rubbing of the mark for fifteen seconds with a rag soaked in water. The data plate must be made of a material that permanently guarantees the legibility of the information, and that does not become degraded over time under normal environmental conditions.

External power supplies in scope of this Mexican Official Standard that are directly sold to the public, individually, that is, not as a piece or accessory of a product for end-use, must bear the

information as listed below. This label is additional to the marking that must be done as listed above. The information can be imprinted or affixed, or placed on the product, or packaging or instructions or user manuals, or in the regulatory information included with the product. The energy efficiency information must contain the following, as a minimum, in a legible and indelible manner. (Please see Exemption entry in this Section for additional exempted EPS information.)

Label information:

ENERGY EFFICIENCY, in capital letters. Complies with NOM-029-ENER-2017 Level of energy efficiency V or VI, in Roman numbers.

Below is an example of a label in accordance with this standard. The label must be written in Spanish.

### **Exemptions**

This Mexican Official Standard NOM 029-ENER-2017 does not apply to external power supplies:

- a) That are designed to deliver an output AC electrical voltage;
- b) That are equipped with some type of battery or battery pack (including removable ones) that is physically connected to the power supply;
- c) That are equipped with switch for choosing the battery type (or chemical) and an indicator light or meter that shows a battery's charge status (a product with a built-in selector switch for battery types and a meter that shows the status of the battery charge);
- d) Designed for special uses that are part of the equipment and apparatus that are not sold directly to the public, and that are marketed towards business users or institutions that install or operate the equipment directly, or share responsibility with the supplier, in accordance with the technical features and specifications that have been presented and authorized by the Department that issues this standard.

#### **2.11.7 Switches**

#### 2.11.7.1 Requirements for Japan

These requirements are from Japan Ordinance No. 39 of the Ministry of Economy, Trade and Industry (METI) amending the Japan Enforcement Regulation of the Law Concerning the Rational Use of Energy. English translation is not yet available from the Japan Ministry.

#### **Definitions**

**Switch** – Switching apparatus specified by a Cabinet Order set forth in Paragraph 1 of Article 78 of the Law shall be defined in Article 21 in Enforcement Ordinance of the Law Concerning the Rational Use of Energy as below:

(xxiii) Switching apparatus (referring to apparatus which transmit and receive telecommunication signals and are capable of selecting, in the transmission of telecommunication signals, such a path as is provided for in the preceding item (i) for each destination from among a plurality of paths through which the said apparatus may

transmit telecommunication signals and of transmitting telecommunication signals to each destination through the said path selected (limited to such apparatus used exclusively for telecommunications via the Internet, excluding those capable of wireless communications and other matters specified by an Ordinance of the METI)).

The exclusion from application for switching apparatus prescribed by an Ordinance of the METI as set forth in Article 21, item (xxiii) of the Enforcement Order shall be as follows:

- (i) Those which do not transmit or exchange any Ethernet frames;
- (ii) Those which transmit and exchange Internet Protocol packets;
- (iii) Those with connection ports for transmitting and/or receiving telecommunications signals, half or more of which use a two-wire connection mode;
- (iv) Those designed to be capable of being incorporated into items such as a housing or computer;
- (v) Those intended to control a device that wirelessly relays telecommunication signals;
- (vi) Those intended mainly for use as a power supply, as specified by the Minister of Economy, Trade and Industry.

### Requirements

Switch suppliers must provide to Lenovo the following information with respect to the energy efficiency ratio of an applicable Switch in order to meet the Japanese Energy Savings law:

- (a) Product names, including manufacturer's name,
- (b) Category letter and the Standard Energy Efficiency Ration,
- (c) Line speed for a port during measurement and the number of ports per line speed,
- (d) Maximum effective transmission speed at a frame length of 1,518 bytes, (e) Maximum supply capability achieved by Power over Ethernet (limited to Switches with the Power over Ethernet function), and
- (f) Energy efficiency ratio.

The above information must be included in a prominent location in a product catalog where either the performance of the Switch is indicated or in a document used for the selection of a Switch.

## Requirements for the EU and other CE Marking jurisdictions References

EU Commission Regulation No 801/2013 of 22 August 2013 amending Regulation (EC) No 1275/2008 with regard to ecodesign requirements for standby, off mode electric power consumption of electrical and electronic household and office equipment

EU Directive 2009/125/EC of the European Parliament and of the Council of 21 October 2009 establishing a framework for the setting of ecodesign requirements for energy-related products Jordan JSNO 2090/2013 Technical Regulation on eco-design requirements for energy related products Jordan JSNO 2109/2013 Technical Regulation on eco-design requirements for standby and off mode electric power consumption of electrical and electronic household and office equipment

#### **2.11.8 Routers**

### **Requirements for Japan**

These requirements are from Japan Ordinance No. 39 of the METI amending the Japan Enforcement Regulation of the Law Concerning the Rational Use of Energy. English translation is not yet available from the Japan Ministry.

#### **Definitions**

**Router** – Router apparatus specified by a Cabinet Order set forth in Paragraph 1 of Article 78 of the Law shall be defined in Article 21 in Enforcement Ordinance of the Law Concerning the Rational Use of Energy as below:

(xxii) Routing apparatus (referring to apparatus which transmit and receive telecommunication signals and are capable of identifying, in the transmission of telecommunication signals, the path that is the most appropriate of the existing plurality of paths to the destination apparatus according to circumstances such as the conditions of the said paths, and of transmitting the said telecommunication signals through the said path identified as being the most appropriate (limited to such apparatus used exclusively for telecommunications transmission via the Internet, excluding those used for connecting a communication terminal to the Internet via a telephone line for the purpose of telephoning an Internet-access service provider to connect the said communication terminal to the Internet, and other matters specified by an Ordinance of the METI.))

Exclusions from application for the Routing apparatus prescribed by an Enforcement Regulation of the METI as set forth in Article 48, item (20) of the Enforcement regulations shall be as follows:

- (i) Those which do not transmit or exchange Internet Protocol packets;
- (ii) Those which transmit Internet Protocol packets at a speed, in terms of the maximum sum of signal bits of the said packets transmitted per unit time, in excess of 200 megabits per second (excluding those listed in item (vi));
- (iii) Those equipped with a device intended for the use of Asynchronous Transfer Mode that cannot be easily removed;
- (iv) Those with the capability to superimpose a high-frequency current of 10 kilohertz or higher upon a power line;
- (v) Those with connection ports for transmitting and/or receiving telecommunication signals, at least three of which (excluding such connection ports which use Internet Protocol) are intended for transmitting and/or receiving audio signals;
- (vi) Those which wirelessly transmit Internet Protocol packets at a speed, in terms of the maximum sum of signal bits of the said packets transmitted per unit time, in excess of 100 megabits per second; (vii) Those with the capability to use an artificial satellite;
- (viii) Those with the capability to multiplex and then transmit 53 subcarriers or more by an orthogonal frequency division multiplex system;
- (ix) Those with the capability to set up a virtual closed network;
- (x) Those designed to be capable of being incorporated into items such as a computer.

#### **Requirements**

Router suppliers must provide Lenovo the following information with respect to the energy efficiency ratio of an applicable Router to meet the Japanese Energy Savings law:

- (a) Product names, including manufacturer's name,
- (b) Category letter and the Standard Energy Efficiency Ratio,
- (c) Availability of 2.4 GHz band wireless output power (for Routers falling under category C, limited to cases of 2.4 GHz band wireless transmission only or of simultaneous transmission of waves of the two frequency bands),
- (d) Availability of 5 GHz band wireless output power (for Routers falling under Category C, limited to cases of 5GHz band wireless transmission only or of simultaneous transmission of waves of the two frequency bands), and
- (e) Energy efficiency ratio.

The above information must be included in a prominent location in a product catalog where either the performance of the Router is indicated or in a document used for the selection of a Router.

### 2.11.9 Servers and Data Storage Product Requirements for the EU

### Requirements for the EU

#### References

EU Regulation 2019/424 laying down ecodesign requirements for servers and data storage products. EN 303 470:2019 Energy Efficiency measurement methodology and metrics for servers. Generalized Test Protocol for Calculating the Energy Efficiency of Internal AC-DC and DC-DC Power Supplies (80Plus program – EPRI and Ecova).

This regulation does not apply to the following products:

- a) Servers intended for embedded applications;
- b) Servers classified as small scale servers in terms of Regulation (EU) No 617/2013;
- c) Servers with more than four processor sockets;
- d) Server appliances;
- e) Large servers;
- f) Fully fault tolerant servers;
- g) Network servers;
- h) Small data storage products:
- i) Large data storage products.

### **Definitions**

**Server** means a computing product that provides services and manages networked resources for client devices, such as desktop computers, notebook computers, desktop thin clients, internet protocol telephones, smartphones, tablets, tele-communication, automated systems or other servers, primarily accessed via network connections, and not through direct user input devices, such as a keyboard or a mouse and with the following characteristics:

- a) it is designed to support server operating systems (OS) and/or hypervisors, and targeted to run user-installed enterprise applications;
- b) it supports error-correcting code and/or buffered memory (including both buffered dual inline memory modules and buffered on board configurations);
- c) all processors have access to shared system memory and are independently visible to a single OS or hypervisor;

**Server with more than four processor sockets** means a server containing more than four interfaces designed for the installation of a processor. For multi-node servers, this term refers to a server having more than four processor sockets in each server node;

**Embedded application** means a software application that permanently resides in an industrial or consumer device, typically stored in a non-volatile memory such as read-only memory or flash memory;

**Server appliance** means a server that is not intended to execute user-supplied software, delivers services through one or more networks, is typically managed through a web or command line interface and is bundled with a pre-installed OS and application software that is used to perform a dedicated function or set of tightly coupled functions;

**Resilient server** means a server designed with extensive reliability, availability, serviceability and scalability features integrated in the micro architecture of the system, central processing unit (CPU) and chipset;

**Large server** means a resilient server which is shipped as a pre-integrated/pre-tested system housed in one or more full frame racks and that includes a high connectivity input/output subsystem with a minimum of 32 dedicated input/output slots;

**Multi-node server** means a server that is designed with two or more independent server nodes that share a single enclosure and one or more power supply units. In a multi-node server, power is distributed to all nodes through shared power supply units. Server nodes in a multi-node server are not designed to be hot-swappable;

**Fully fault tolerant server** means a server that is designed with complete hardware redundancy (to simultaneously and repetitively run a single workload for continuous availability in mission critical applications), in which every computing component is replicated between two nodes running identical and concurrent workloads (i.e., if one node fails or needs repair, the second node can run the workload alone to avoid downtime);

**Network server** means a network product which contains the same components as a server in addition to more than 11 network ports with a total line rate throughput of 12 Gb/s or more, the capability to dynamically reconfigure ports and speed and support for a virtualized network environment through a software defined network;

**Data storage product** means a fully-functional storage system that supplies data storage services to clients and devices attached directly or through a network. Components and subsystems that are an integral part of the data storage product architecture (e.g., to provide internal communications between controllers and disks) are considered to be part of the data storage product. In contrast, components that are normally associated with a storage environment at the data centre level (e.g. devices required for operation of an external storage area network) are not considered to be part of the data storage product. A data storage product may be composed of integrated storage controllers, data storage devices, embedded network elements, software, and other devices;

**Hard Disk Drive** (HDD) means a data storage device which reads and writes to one or more rotating magnetic disk platters;

**Solid State Drive (SSD)** means a data storage device that reads and writes to non-volatile solid state memory instead of rotating magnetic platters for data storage;

**Data storage device** means a device providing non-volatile data storage, with the exception of aggregating storage elements such as subsystems of redundant arrays of independent disks, robotic

28June2020 Page 117 of 190 Version 7.8

tape libraries, filers, and file servers and storage devices which are not directly accessible by enduser application programs, and are instead employed as a form of internal cache;

**Online data storage product** means a data storage product designed for online, random-access of data, accessible in a random or sequential pattern, with a maximum time to first data of less than 80 milliseconds;

**Small data storage product** means a data storage product containing a maximum of three data storage devices;

**Large data storage product** means a high end or mainframe data storage product that supports more than 400 data storage devices in its maximum configuration and with the following required attributes: no single point of failure, non-disruptive serviceability and integrated storage controller

### 2.11.9.1 Specific ecodesign requirements for servers and data storage products

### **PSU** efficiency and power factor requirements

From 1 March 2020, for servers and online data storage products, with the exception of direct current servers and of direct current data storage products, the PSU efficiency at 10%, 20%, 50% and 100% of the rated load level and the power factor at 50% of the rated load level shall not be less than the values reported in the table below.

#### Minimum PSU efficiency and power factor requirements from 1 March 2020

	Minimum PSU efficiency				Minimum power factor
% of rated load	10 %	20 %	50 %	100 %	50 %
Multi output	_	88 %	92 %	88 %	0,90
Single output	_	90 %	94 %	91 %	0,95

From 1 January 2023, for servers and online data storage products, with the exception of direct current servers and of direct current data storage products, the PSU efficiency at 10%, 20%, 50% and 100% of the rated load level and the power factor at 50% of the rated load level shall not be less than the values reported in the table below.

Minimum PSU efficiency and power factor requirements from 1 January 2023

		Minimum P	Minimum power factor		
% of rated load	10 %	20 %	50 %	100 %	50 %
Multi output	_	90 %	94 %	91 %	0,95
Single output	90 %	94 %	96 %	91 %	0,95

### Material efficiency requirements

From 1 March 2020, manufacturers shall ensure that joining, fastening or sealing techniques do not prevent the disassembly for repair or reuse purposes of the following components, when present:

- a) Data storage devices
- b) Memory
- c) Processor (CPUs)
- d) Motherboard
- e) Expansion card/graphic card
- f) Power supply unit
- g) chassis
- h) batteries.

From 1 March 2020, a functionality for secure data deletion shall be made available for the deletion of data contained in all the data storage devices of the product.

From 1 March 2021, the latest available version of the firmware shall be made available from two years after the placing on the market of the first product of a certain product model for a minimum period of eight years after the placing on the market of the last product of a certain product model, free of charge or at a fair, transparent and nondiscriminatory cost. The latest available security update to the firmware shall be made available from the time a product model is placed on the market until at least eight years after the placing on the market of the last product of a certain product model, free of charge.

### 2.11.9.2 Specific ecodesign requirements for servers with one or two processor sockets

#### **Idle State Power**

From 1 March 2020, the idle state power (Pidle) of servers with the exception of resilient servers, HPC servers and servers with integrated APA, shall not exceed the value calculated using the following equation:

$$P_{idle} = P_{base} + \sum_{Padd i}$$

Where  $P_{base}$  is the basic idle state power allowance in the first Table below, and  $\Sigma_{Padd\_i}$  is the sum of the idle state power allowances for applicable, additional components, as determined in the second Table below. For blade servers,  $P_{idle}$  is calculated as the total measured power divided by the number of installed blade servers in the tested blade chassis. For multi-node servers, the number of sockets are counted per node while  $P_{idle}$  is calculated as the total measured power divided by the number of installed nodes in the tested enclosure.

### Base idle state power allowances

-Product type	Base idle state power allowance, P <sub>base</sub> (W)
1-socket servers (neither blade nor multi-node servers)	25
2-socket servers (neither blade nor multi-node servers)	38
Blade or multi-node servers	40

### Additional Idle Power Allowances for Extra Components

System characteristics	Applies to	Additional idle power allowance	
CPU Performance	All servers	1 socket: 10 × Perf <sub>CPU</sub> W 2 socket: 7 × Perf <sub>CPU</sub> W	
Additional PSU	PSU installed explicitly for power redundancy	10 W per PSU	
HDD or SSD	Per installed HDD or SSD	5,0 W per HDD or SSD	
Additional memory	Installed memory greater than 4 GB	0,18 W per GB	
Additional buffered DDR channel	Installed buffered DDR chan- nels greater than 8 channels	4,0 W per buffered DDR channel	
Additional I/O devices	Installed devices greater than two ports of ≥ 1 Gbit, on-	< 1 Gb/s: No Allowance	
	board Ethernet	= 1 Gb/s: 2,0 W/Active Port	
		> 1 Gb/s and < 10 Gb/s: 4,0 W/Active Port	
		≥ 10 Gb/s and < 25Gb/s: 15,0 W/Active Port	
		≥ 25 Gb/s and < 50Gb/s: 20,0 W/Active Port	
₩		≥ 50 Gb/s 26,0 W/Active Port	

### **Active state efficiency**

From 1 March 2020, the active state efficiency (Eff<sub>server</sub>) of servers, with the exception of resilient servers, HPC servers and servers with integrated APA, shall not be lower than the values in table below.

### Active state efficiency requirements

Product type	Minimum active state efficiency
1-socket servers	9,0
2-socket servers	9,5
Blade or multi-node servers	8,0

### 2.11.9.3 Information to be provided by manufacturers

#### 2.11.9.3.1

From 1 March 2020, with the exception of custom made servers, made on a one-off basis, the following product information on servers shall be provided in the instruction manuals for installers and end-users (when present with the product), and on the free-access websites of manufacturers, their authorised representatives and importers from the time a product model is placed on the market until at least eight years after the placing on the market of the last product of a certain product model:

- a) product type;
- b) manufacturer's name, registered trade name and registered trade address at which they can be contacted:
- c) product model number, and if applicable the low-end performance configuration and the highend performance configuration model numbers;
- d) year of manufacture;
- e) PSU efficiency at 10% (if applicable), 20%, 50% and 100% of rated output power, with the exception of direct current servers, expressed in % and rounded to the first decimal place;
- f) power factor at 50% of the rated load level, with the exception of direct current servers, rounded to three decimal places;
- g) PSU rated power output (Watts), rounded to the nearest integer. If a product model is part of a server product family, all PSUs offered in a server product family shall be reported with the information specified in (5) and (6);
- h) idle state power expressed in Watts and rounded to the first decimal place;
- i) list of all components for additional idle power allowances, if any (additional PSU, HDDs or SSDs, additional memory, additional buffered DDR channels, additional I/O devices);
- i) maximum power expressed in Watts and rounded to the first decimal place;
- k) declared operating condition class;
- l) idle state power (Watts) at the higher boundary temperature of the declared operating condition class:
- m) the active state efficiency and the performance in active state of the server;
- n) information on the secure data deletion functionality, including instructions on how to use thefunctionality, the techniques used and the supported secure data deletion standard(s), if any;
- o) or blade servers, a list of recommended combinations with compatible chassis;
- p) if a product model is part of a server product family, a list of all model configurations that are

represented by the model shall be supplied.

If a product model is part of a server product family, the product information required for items e) to m) shall be reported for the low-end and high-end performance configurations of the server product family.

#### 2.11.9.3.2

From 1 March 2020, with the exception of custom made data storage products, made on a one-off basis, the following product information on online data storage products shall be provided in the instruction manuals for installers and end-users (when present with the product), and on the free-access websites of manufacturers, their authorised representatives and importers from the time a product model is placed on the market until at least eight years after the placing on the market of the last product of a certain product model:

- a) product type;
- b) manufacturer's name, registered trade name and registered trade address at which they can be contacted;
- c) product model number,
- d) year of manufacture;
- e) PSU efficiency at 10% (if applicable), 20%, 50% and 100% of rated output power, with the exception of direct current online data storage products, expressed in % and rounded to the first decimal place;
- f) power factor at 50% of the rated load level, with the exception of direct current online data storage products, rounded to three decimal places;
- g) declared operating condition class; it shall also be indicated that 'This product has been tested in order to verify that it will function within the boundaries (such as temperature and humidity) of the declared operating condition class';
- h) information on the data deletions tool(s), including instructions on how to use the functionality, the techniques used and the supported secure data deletion standard(s), if any.

#### 2.11.9.3.3

From 1 March 2020, the following product information on servers and online data storage products shall be made available from the time a product model is placed on the market until at least eight years after the placing on the market of the last product of a certain product model free of charge by manufacturers, their authorized representatives and importers to third parties dealing with maintenance, repair, reuse, recycling and upgrading of servers (including brokers, spare parts repairers, spare parts providers, recyclers and third party maintenance) upon registration by the interested third party on a website provided:

- a) indicative weight range (less than 5 g, between 5 g and 25 g, above 25 g) at component level, of the following critical raw materials:
  - i. Cobalt in the batteries:
  - ii. Neodymium in the HDDs;
- b) instructions on the disassembly operations referred to in point 1.2.1 of this Annex, including, for each necessary operation and component:
  - i. the type of operation;
  - ii. the type and number of fastening technique(s) to be unlocked;

iii. the tool(s) required.

In the case of servers, if a product model is part of a server product family, the product information required for items a) and b) under point 3.3 shall be reported either for the product model or, alternatively, for the low-end and high-end configurations of the server product family.

#### 2.11.9.4

From 1 March 2020, the following product information on servers and online data storage products shall be provided in the technical documentation for the purposes of conformity assessment pursuant to Article 4:

- a) Information listed in points 2.11.9.1 and 2.11.9.3, in the case of servers
- b) Information listed in points 2.11.9.2 and 2.11.9.3, in the case of data storage products

# 2.11.10 Requirements for California 2.11.10.1 Computers

-

**Scope/Requirements** 

**Effective Date for Implementation:** January 1, 2019

Desktop computers, thin clients, mobile gaming systems, portable all-in-ones, and notebook computers.

Comply with Table V-7

Energy Consumption Standards for Desktop Computers, Thin Clients, Notebook Computers, Mobile Gaming Systems, and Portable All-in-Ones

Computer Type	For models manufactured on or after January 1, 2019, and before July 1, 2021, the measured annual energy consumption shall be less than or equal to the values below.	For models manufactured on or after July 1, 2021, the measured annual energy consumption shall be less than or equal to the values below.
Desktop Computers, mobile gaming systems, and thin clients with an ES Inf 250 or less	50 kWh/yr + applicable adders in Table V-8	50 kWh/yr + applicable adders in Table V-8
Desktop Computers, mobile gaming systems, and thin clients with an ES of more than 250 but no more than 425	80 kWh/yr + applicable adders in Table V-8	60 kWh/yr + applicable adders in Table V-8
Desktop Computers, mobile gaming systems, and thin clients with an ES of more than 425 but no more than 690	100 kWh/yr + applicable adders in Table V-8	75 kWh/yr + applicable adders in Table V-8
Notebook computers and portable all-in-ones	30 kWh/yr + applicable adders in Table V-8	30 kWh/yr + applicable adders in Table V-8
Minimum power factor of a computer power supply that is not a federally- regulated external power supply	0.9 measured at full load	0.9 measured at full load

Be shipped with power management settings that do both of the following:

- 1) Transition the computer into either the computer sleep mode or computer off mode measured in Section 1604(v)(5) within 30 minutes of user inactivity. If the transition is to a computer sleep mode, that sleep mode shall either:
  - a. Be a computer sleep mode as described in ACPI as S3; or
  - b. Consume power less than or equal to the values shown in Table V-6.
- 2) Transition connected displays into sleep mode within 15 minutes of user inactivity.
  - (c) If the model is shipped at the purchaser's request with either a limited capability operating system or without an operating system, or if the model is not capable of having an operating system, the model is not required to comply with Section 1605.3(v)(5)(B).
  - (d) Desktop computers and thin clients assembled before July 1, 2021, entirely from parts manufactured before September 1, 2018, are not required to comply with Section 1605.3(v)(5)(A).

28June2020 Page 124 of 190 Version 7.8

Alternative Computer Sleep Mode Power Limits

Computer Type	Maximum Power Consumption (watts)
Workstations, Mobile Workstations, High Expandability Computers, Small-Scale Servers	10 + 0.03 * C where C is the system memory capacity in gigabytes minus 32 gigabytes. If C is less than zero, use zero for the value of C.
Desktop Computers, Thin Clients, Mobile Gaming Systems	5 + 0.03 * C where C is the system memory capacity in gigabytes minus 32 gigabytes. If C is less than zero, use zero for the value of C.
Notebook Computers, Portable All-In-Ones	2.5 + 0.03 * C where C is the system memory capacity in gigabytes minus 16 gigabytes. If C is less than zero, use zero for the value of C. If a discrete GPU is present in the system, the maximum power consumption limit shall be increased by an additional 2 watts.

#### **2.11.10.2 Monitors**

### Scope/Requirements for California, Washington, and Colorado

#### References

California Appliance Efficiency (CEC) Regulations – Appliance Efficiency Rulemaking for Computers, Computer Monitors, and Signage Displays. Regulation and details are located at: http://www.energy.ca.gov/

Washington Appliance Efficiency Standards Chapter 286, Laws of 2019 Colorado Revised Statutes Article 7.5 Water and Energy Efficiency Standards

#### Effective Date for Implementation (California): July 1, 2019

#### **Requirements**

Computer monitors manufactured on or after July 1, 2019, shall comply with the energy efficiency standards in CEC Appliance Efficiency Rulemaking for Computers, Computer Monitors, and Signage Displays in Section 1605.3 including Table V-4. Medical computer monitors are not required to comply with Section 1605.3(v)(4) or the test procedures in Section 1604(v)(4).

Manufacturers of Computer monitors, and Medical computer monitors must comply with the certification requirements in Section 1606 (Filing by Manufacturers with the State of California) for each of the products sold or offered for sale in California as well as the marking requirements in Section 1607 (manufacturer's name, model number and date of manufacture).

Rack mounted displays are out of scope of this regulation.

- shall comply with all of the following:

 $E_{on} \leq (E_{on\_max} + E_{EP} + E_{Game} + E_{OLED} + E_{Curve})$ 

- E<sub>EP</sub> is the enhanced performance display allowance in watts as determined in Table V-5.
- E<sub>Game</sub> is the gaming monitor allowance in watts as determined in Table V-5,
- E<sub>OLED</sub> is the OLED monitor allowance in watts as determined in Table V-5, and
- E<sub>Curve</sub> is the curved monitor allowance in watts as determined in Table V-5.

Allowance	Computer Monitor Type	2019.07.01 ~ 2021.01.01	2021.01.01~			
	Enhanced Performance Display with a color gamut support of 32.9% of CIELUV or greater (99% or more of defined sRGB colors)	0.3 X E <sub>on_max</sub>	0.2 X E <sub>on_max</sub>			
	Enhanced Performance Display with a color gamut support of 38.4% of CIELUV or greater (99% or more of defined Adobe RGB colors)	0.75 X E <sub>on_max</sub>	0.6 X E <sub>on_max</sub>			
	Gaming Monitors without incremental hardware-based assistance	0.3 X E <sub>on_max</sub>	0.2 X E <sub>on_max</sub>			
Egame	Gaming Monitors with incremental hardware-based assistance	0.35 X E <sub>on_max</sub>	0.3 X E <sub>on_max</sub>			
EOLED	E <sub>OLED</sub> OLED monitor		0.2 X E <sub>on_max</sub>			
Ecurve	E <sub>Curve</sub> Curved monitor		0.2 X E <sub>on_max</sub>			
Touch functionality	Touch functionality 1 watt allowance per mode in modes where touch functionality is enabled					

- shall comply with all of the following:
- (B) Consume less than or equal to 1.2 watts in computer monitor sleep mode and computer monitor off mode power combined.
- (C) Be shipped with a screen luminance less than or equal to 200 cd/m<sup>2</sup> ± 35 percent.
   A manufacturer may ship with additional features enabled, even if they were turned off in testing.
- (D) Computer monitors with touch screen capability are allowed an additional 1 watt allowance per mode in modes where touch functionality is enabled.
- shall comply with all of the following:
- (E) EXCEPTIONS to Section 1605.3(v)(4): The following computer monitors are not required to comply with Section 1605.3(v)(4) but shall comply with the test procedures in Section 1604(v)(4), the certification requirements in Section 1606, and the marking requirements in Section 1607:
  - 1. KVMs.
  - 2. KMMs.
  - 3. Very high performance monitors.
- (F) EXCEPTION to Section 1605.3(v)(4): Medical computer monitors are not required to comply with Section 1605.3(v)(4) or the test procedures in Section 1604(v)(4) but shall comply with the certification requirements in Section 1606 and the marking requirements in Section 1607.

The Computers and Displays regulations are in affect and can be referenced here (sections 1602, 1604, 1605.3, etc).

#### **Requirements**

For EU Regulation 2019/2021 ecodesign requirements for Electronic Displays, see below. Refer to the regulation for more definitions and specific requirements including testing.

### **Definitions**

**Electronic Display** means a display screen and associated electronics that, as its primary function, displays visual information from wired or wireless sources;

Monitor or computer monitor, or computer display means an Electronic Display intended for one

person for close viewing such as in a desk-based environment;

**Status display** means a display used to show simple but changing information such as selected channel, time or power consumption. A simple light indicator is not considered a status display;

Control panel means an electronic display whose main function is to display images associated with product operational status; it may provide user interaction by touch or other means to control the product operation. It may be integrated into products or specifically designed and marketed to be used exclusively with the product;

**Professional display** means an electronic display designed and marketed for professional use for editing video and graphic images. Its specification shall include all of the following features:

- a) a contrast ratio of at least 1000:1 measured at a perpendicular to the vertical plane of the screen and at least 60:1 measured at a horizontal viewing angle of at least 85° relative to that perpendicular and at least 83° from the perpendicular on a curved screen, with or without a screen cover glass;
- b) a native resolution of at least 2,3 mega pixels;
- c) colour Gamut support is 38,4 % of CIE LUV or greater (equivalent to greater than 99 % of Adobe RGB and over 100 % of sRGB colour space). Shifts in colour space are allowable as long as the resultant colour space is at least 38,4 % of CIE LUV. Colour and luminance uniformity shall be as required for grade 1 monitors;

**Security display** means an electronic display whose specification shall include all of the following features:

A - self-monitoring function capable of communicating at least one of the following information to a remote server:

- power status;
- internal temperature from anti-overload thermal sensing;
- video source:
- audio source and audio status (volume/mute);
- model and firmware version;

B - user-specified specialist form factor facilitating the installation of the display into professional housings or consoles;

**Integrated** referring to a display which is part of another product as a functional component, means an electronic display that is not able to be operated independently from the product and that depends on it for providing its functions, including power;

**Medical display** means an electronic display covered by the scope of:

- a) Council Directive 93/42/EEC (16) concerning medical devices; or
- b) Regulation (EU) 2017/745 of the European Parliament and of the Council (17) on medical devices; or
- c) Council Directive 90/385/EEC (18) on the approximation of the laws of the Member States relating to active implantable medical devices; or
- d) Directive 98/79/EC of the European Parliament and of the Council (19) on in vitro diagnostic medical devices; or
- e) Regulation (EU) 2017/746 of the European Parliament and of the Council (20) on in vitro diagnostic medical devices;

This regulation applies to electronic displays, including televisions, monitors and digital signage

displays

This Regulation shall not apply to the following:

- a) any Electronic Display with a screen area smaller than or equal to 100 square centimeters;
- b) projectors;
- c) all-in-one video conference systems;
- d) medical displays;
- e) virtual reality headsets;
- f) displays integrated or to be integrated into products listed into Article 2, point 3(a) and point 4 of Directive 2012/19/EU (WEEE) (equipment which is necessary for the protection of the essential interests of the security of Member States, including arms, munitions and war material intended for specifically military purposes; equipment designed to be sent into space; large-scale stationary industrial tools; large-scale fixed installations, except any equipment which is not specifically designed and installed as part of those installations; means of transport for persons or goods, excluding electric two-wheel vehicles which are not type-approved; non-road mobile machinery made available exclusively for professional use; equipment specifically designed solely for the purposes of research and development that is only made available on a business-to-business basis; medical devices and in vitro diagnostic medical devices, where such devices are expected to be infective prior to end of life, and active implantable medical devices.)
- g) displays that are components or subassemblies of products covered by implementing measures adopted under Directive 2009/125/EC (EU Directive 2009/125/EC establishing a framework for the setting of ecodesign requirements for energy-related products.)

### Requirements

The requirements in points A (Energy Efficiency Requirements) and B (Allowances and Adjustments for the purpose of the EEI Calculation and functional requirements) of Annex II of this regulation shall not apply to the following displays:

- a) broadcast displays;
- b) professional displays;
- c) security displays;
- d) digital interactive whiteboards;
- e) digital photo frames;
- f) digital signage displays.

For the displays above, points C (Off mode, standby and networked standby mode requirements), D (Material Efficiency Requirements) and E (Information Availability Requirements) of Annex II of this regulation do apply.

The requirements in points A, B and C (Off mode, standby and networked standby mode requirements) of Annex II of this regulation shall not apply to the following displays:

- a) status displays;
- b) control panels.

For status displays and control panels, the requirements in points D (Material Efficiency Requirements) and E (Information Availability Requirements) of Annex II of the regulation do apply.

These requirements are effective from 1 March 2021, except for the requirements in this paragraph only which are in effect at this time. The Electronic Display must not be designed to be able to detect they are being tested (e.g. by recognizing the test conditions or test cycle) and to react specifically by automatically altering their performance during the test with the aim of reaching a more favorable level, for any of the parameters required. The energy consumption of the product and any of the other declared parameters shall not deteriorate after a software or firmware update when measured with the same test standard originally used. No performance change shall occur as result of rejecting the update. A software update shall never have the effect of changing the product's performance in a way that makes it non-compliant with the ecodesign requirements applicable. This paragraph is effective at this time.

The Electronic Display must meet all of the energy efficiency and ecodesign requirements as outlined in Annex II of the regulation. Control panels must meet the Material Efficiency requirements in Point D and Information availability requirements in Point E of Annex II of the regulation only.

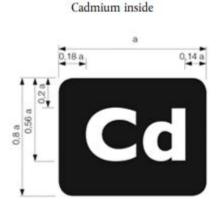

Manufacturers shall ensure that joining, fastening or sealing techniques do not prevent the removal, using commonly available tools, of the components indicated in point 1 of Annex VII of Directive 2012/19/EU (WEEE) or in Article 11 of Directive 2006/66/EC on batteries and accumulators and waste batteries and accumulators.

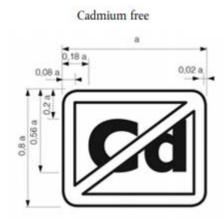

Manufacturers and importers shall make available, on a free-access website, the dismantling information needed to access the components referred to in point 1 of Annex VII of Directive 2012/19/EU (WEEE). This dismantling information shall include the sequence of dismantling steps, tools or technologies needed to access the targeted components. The end of life information shall be available until at least 15 years after the placing on the market of the last unit of a product model.

Plastic components > 50 grams shall be marked in accordance with Article II of the regulation. See Section 2.3.2 of this specification or the regulation for more detail.

Electronic Displays which have concentration values of Cadmium (Cd) by weight in homogeneous materials exceeding 0.01 % as defined in Directive 2011/65/EU (RoHS) on the restriction of the use of certain hazardous substances in electrical and electronic equipment, shall be labeled with the 'Cadmium inside' logo. The logo shall be clearly visible durable, legible and indelible. The logo shall be in the form of the following graphic:

The dimension of 'a' shall be greater than 9 mm and the typeface to be used is 'Gill Sans'.

An additional 'Cadmium inside' logo shall be firmly attached internally on the display panel or molded in a position clearly visible to workers once the external back cover bearing the external logo is removed.

A 'Cadmium free' logo shall be used if concentration values of Cadmium (Cd) by weight in any homogeneous material part of the display do not exceed 0.01 % as defined in Directive 2011/65/EU (RoHS).

The use of halogenated flame retardants is not allowed in the enclosure and stand of Electronic Displays.

#### Access to repair and maintenance information

After a period of two years after the placing on the market of the first unit of a model or of an equivalent model, and until the end of the period mentioned under (a), the manufacturer shall provide access to the appliance repair and maintenance information to professional repairers. See the regulation for specific details such as registration, technical competence of the repairer, insurance coverage, and fees.

From 1 March 2021, the manufacturer shall make available the information below. The information shall be provided free of charge to third parties dealing with professional repair and reuse of Electronic Displays.

Availability of software and firmware updates.

a) The latest available version of the firmware shall be made available for a minimum period of eight years after the placing on the market of the last unit of a certain product model, free of charge or at a fair, transparent and nondiscriminatory cost. The latest available security

- update to the firmware shall be made available until at least eight years after the placing on the market of the last product of a certain product model, free of charge.
- b) Information on the minimum guaranteed availability of software and firmware updates, availability of spare parts and product support shall be indicated in the product information sheet as from Annex V of Regulation (EU) 2019/2013.

The manufacturer of the electronic display must provide this information to IBM upon request including a Declaration of Conformity and Technical Documentation.

For EU Regulation 2019/2013 energy labeling of Electronic Displays see below. Refer to the regulation for more definitions and specific requirements.

#### **Definitions**

**Electronic Display** means a display screen and associated electronics that, as its primary function, displays visual information from wired or wireless sources;

**Monitor or computer monitor, or computer display** means an electronic display intended for one person for close viewing such as in a desk based environment;

**Status display** means a display used to show simple but changing information such as selected channel, time or power consumption. A simple light indicator is not considered a status display Control panel means an electronic display whose main function is to display images associated with product operational status; it may provide user interaction by touch or other means to control the product operation. It may be integrated into products or specifically designed and marketed to be used exclusively with the product;

**'security display'** means an electronic display whose specification shall include all of the following features:

- (a) self-monitoring function capable of communicating at least one of the following information to a remote server:
  - power status;
  - internal temperature from anti-overload thermal sensing;
  - video source;
  - audio source and audio status (volume/mute);
  - model and firmware version;
- (b) user-specified specialist form factor facilitating the installation of the display into professional housings or consoles;

**Medical display** means an electronic display covered by the scope of:

- a) Council Directive 93/42/EEC (10) concerning medical devices; or
- b) Regulation (EU) 2017/745 of the European Parliament and of the Council (11) on medical devices; or
- c) Council Directive 90/385/EEC (12) on the approximation of the laws of the Member States relating to active implantable medical devices; or
- d) Directive 98/79/EC of the European Parliament and of the Council (13) on in vitro diagnostic medical devices; or
- e) Regulation (EU) 2017/746 of the European Parliament and of the Council (14) on in vitro diagnostic medical devices.

### Requirements – see Regulation for more details and requirements

This regulation applies to electronic displays, including televisions, monitors and digital signage displays.

This Regulation shall not apply to the following:

- a) any Electronic Display with a screen area smaller than or equal to 100 square centimeters;
- b) projectors;
- c) all-in-one video conference systems;
- d) medical displays;
- e) virtual reality headsets;
- f) displays integrated or to be integrated into products listed in points 3(a) and 4 of Article 2 of Directive 2012/19/EU of the European Parliament and of the Council (8);
- g) electronic displays that are components or subassemblies of products covered by implementing measures adopted under Directive 2009/125/EC;
- h) broadcast displays;
- i) security displays;
- j) digital interactive whiteboards;
- k) digital photo frames;
- 1) digital signage displays which meet any of the following characteristics:
  - 1) designed and constructed as a display module to be integrated as a partial image area of a larger display screen area and not intended for use as a standalone display device;
  - 2) distributed self-contained in an enclosure for permanent outdoor use;
  - 3) distributed self-contained in an enclosure with a screen area less than 30 dm2 or greater than 130 dm2;
  - 4) the display has a pixel density less than 230 pixels/cm2 or more than 3025 pixels/cm2;
  - 5) a peak white luminance in standard dynamic range (SDR) operating mode of greater than or equal to 1000 cd/m2;
  - 6) no video signal input interface and display drive allowing the correct display of a standardized dynamic video test sequence for power measurement purposes;
- m) status displays;
- n) control panels.

#### Supplier shall ensure that:

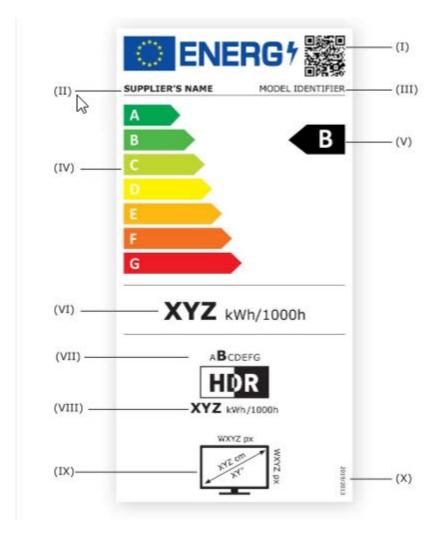

Electronic Displays are labeled in a printed form in the format and containing the information set out in Annex III of this regulation. This label shall also be printed on the packaging or adhered to the packaging.

The parameters of the product information sheet, found in Annex V of the regulation must be entered into the product database.

The content of the technical documentation, found in Annex VI of the regulation, must be entered into the product database.

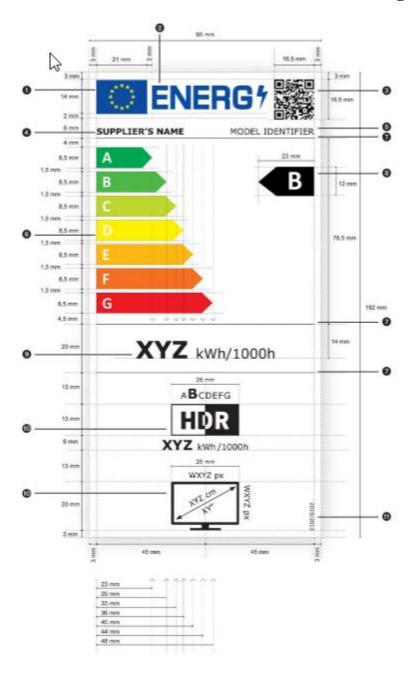

The following information shall be included in the label for Electronic Displays:

- I. OR code:
- II. supplier's name or trademark;
- III. supplier's model identifier;
- IV. scale of energy efficiency classes from A to G;
- V. the energy efficiency class determined in accordance with point B of Annex II when using PmeasuredSDR;
- VI. on mode energy consumption in kWh per 1000 h, when playing SDR content, rounded to the nearest integer;
- VII. the energy efficiency class determined in accordance with point B of Annex II when using PmeasuredHDR;
- VIII. the on mode energy consumption in kWh per 1000 h, when playing HDR content, rounded to the nearest integer;
- IX. visible screen diagonal in centimeters and inches and horizontal and vertical resolution in pixels;
- X. the number of this Regulation, that is '2019/2013'.

The label design must follow the format below (see regulation for dimensions, coloration, typeface, etc.)

#### Whereby:

- a) The label shall be at least 96 mm wide and 192 mm high. Where the label is printed in a larger format, its content shall nevertheless remain proportionate to the specifications above. For electronic displays with a size of the diagonal of the visible area less than 127 cm (50 inches), the label can be printed scaled down, but not less than 60 % of its normal size; its content shall nevertheless be proportionate to the specifications above and the QR code still readable by a commonly available QR reader, such as those integrated in a smartphone.
- b) The background of the label shall be 100 % white.
- c) The typefaces shall be Verdana and Calibri.
- d) The dimensions and specifications of the elements constituting the label shall be as indicated in the label design.

- e) Colours shall be CMYK cyan, magenta, yellow and black, following this example: 0,70,100,0: 0 % cyan, 70 % magenta, 100 % yellow, 0 % black.
- f) The label shall fulfil all the following requirements (numbers refer to the figure above):
  - 1 the colours of the EU logo shall be as follows:
    - the background: 100,80,0,0;
    - the stars: 0,0,100,0;
  - 2 the colour of the energy logo shall be: 100,80,0,0;
  - 3 the QR code shall be 100 % black;
  - the supplier's name shall be 100 % black and in Verdana Bold 9 pt;
  - 6 the model identifier shall be 100 % black and in Verdana Regular 9 pt;
  - 6 the A to G scale shall be as follows:
    - the letters of the energy efficiency scale shall be 100 % white and in Calibri Bold 19 pt; the letters shall be centred on an axis at 4.5 mm from the left side of the arrows;
    - the colours of the A to G scale arrows shall be as follows:
      - A-class: 100.0.100.0:
      - B-class: 70,0,100,0;
      - C-class: 30,0,100,0;
      - D-class: 0,0,100,0;
      - E-class: 0,30,100,0;
      - F-class: 0,70,100,0;
      - G-class: 0,100,100,0;
  - the internal dividers shall have a weight of 0,5 pt and the colour shall be 100 % black;
  - The letter of the energy efficiency class shall be 100 % white and in Calibri Bold 33 pt. The energy efficiency class arrow and the corresponding arrow in the A to G scale shall be positioned in such a way that their tips are aligned. The letter in the energy efficiency class arrow shall be positioned in the centre of the rectangular part of the arrow which shall be 100 % black;
  - the energy consumption value in SDR shall be in Verdana Bold 28 pt; 'kWh/1 000h' shall be in Verdana Regular 16 pt. The text shall be centred and in 100 % black;
  - the HDR and the screen pictograms shall be 100 % black and as shown as in the label design; the texts (numbers and units) shall be 100 % black, and as follows:
    - above the HDR pictogram, the letters of energy efficiency classes (A to G) shall be centred, with the letter of the applicable energy efficiency class in Verdana Bold 16 pt and the other letters in Verdana Regular 10 pt; under the HDR pictogram, the energy consumption value in HDR shall be centred, in Verdana Bold 16 pt with 'kWh/1 000h' in Verdana Regular 10 pt;
    - the texts of the screen pictogram shall be in Verdana Regular 9 pt and placed as in the label design;
  - 100 the number of the regulation shall be 100 % black and in Verdana Regular 6 pt.

#### **Product Information Sheet**

The supplier shall enter into the product database the information as set out in the table below.

The product manual or other literature provided with the product shall clearly indicate the link to the model in the product database as a human-readable Uniform Resource Locator (URL) or as QR-code or provide the product registration number.

#### Information, order and format of the product information sheet

	X-ft	V-11	TT-1	N
	Information	Value and precision	Unit	Notes
1.	Supplier's name or trade mark	TEXT		
2.	Supplier's model identifier	TEXT		
3.	Energy efficiency class for standard Dynamic Range (SDR)	[A/B/C/D/E/F/G]		If the product database automati- cally generates the definitive con- tent of this cell, the supplier shall not enter this data.
4.	On mode power demand for Standard Dynamic Range (SDR)	X,X	W	Rounded to the first decimal place for power values below 100 W, and rounded to the first integer for power values from 100 W.
5.	Energy efficiency class (HDR)	[A/B/C/D/E/F/G] or n.a.		If the product database automatically generates the definitive content of this cell, the supplier shall not enter this data. Value set to 'n.a.' (not applicable) if HDR not implemented.
6.	On mode power demand in High Dynamic Range (HDR) mode	X,X	W	Rounded to the first decimal place for power values below 100 W, and rounded to the first integer for power values from 100 W (value set to 0 (zero) if 'not applicable').
7.	Off mode, power demand	X,X	w	
8.	Standby mode power demand	X,X	w	

	Information	Value and precision		Unit	Notes	
9.	Networked standby mode power demand	X,X		W		
10.	Electronic display category	[television/monitor/ signage/other]			Select one.	
11.	Size ratio	X : Y		integer	E.g. 16:9, 21:9, etc.	
12.	Screen resolution (pixels)	X	x	Y	pixels	Horizontal and vertical pixels
13.	Screen diagonal	X,X		cm	In cm according to the Interna- tional System of Units (SI), rounded to the nearest decimal place.	
14.	Screen diagonal	Х		inches	Optional, in inches rounded to the nearest integer place.	
15.	Visible screen area	X,X		cm <sup>2</sup>	Rounded to the one decimal place	
16.	Panel technology used	TEXT			E.g. LCD/LED LCD/QLED LCD/ OLED/MicroLED/QDLED/SED/FED/ EPD, etc.	
17.	Automatic Brightness Control (ABC) available	[YES/NO]			Must be activated as default (if YES).	
18.	Voice recognition sensor available	]	YES/NO	]		
19.	Room presence sensor available	[YES/NO]			Must be activated as default (if YES).	
20.	Image refresh frequency rate	X		Hz		
21.	Minimum guaranteed availability of soft- ware and firmware updates (until):	GG MM AAAA		date	As from Annex II E, point 1 of Commission Regulation (EU) 2019/2021 (¹).	
22.	Minimum guaranteed availability of spare parts (until):	GG MM AAAA		date	As from Annex II D, point 5 of Regulation (EU) 2019/2021.	
23.	Minimum guaranteed product support (until):	GG MM AAAA		date		

	Information		Value and precision	Unit	Notes
24.	Power supply type:		Internal/External/ Standardised external		Select one.
i	External standardised power supply (included in the product box)	Standard name	TEXT		
		Input voltage	X	v	
		Output voltage	X	v	
ii	External standardised suitable power supply (if not included in the product box)	Standard name	TEXT		Mandatory only if EPS not included in the box, non-mandatory otherwise.
		Required output voltage	X,X	V	Mandatory only if EPS not included in the box, non-mandatory otherwise.
		Required deliv- ered current	X,X	A	Mandatory only if EPS not included in the box, non-mandatory otherwise.
		Required cur- rent frequency	Х	Hz	Mandatory only if EPS not included in the box, non-mandatory otherwise.

#### Technical Documentation

#### Shall include:

- 1) identification data (general description of the model):
  - a. trademark and model identifier;
  - b. supplier's name, address, registered trade name;
- 2) references to the harmonised standards applied, other measurement standards and specifications used in measuring the technical parameters and calculations performed;
- 3) specific precautions to be taken when the model is assembled, installed and tested;
- 4) a list of all equivalent models, including model identifiers;
- 5) measured technical parameters of the model and calculations performed with the measured parameters as listed in the table below;

### Measured technical parameters

		Value and precision	Unit	Notes
	General			
1.	Ambient temperature	XX,XX	°C	
2.	Test voltage	х	v	
3.	Frequency	X,X	Hz	
4.	Total harmonic distortion (THD) of the electricity sup- ply system	х	%	
	For On-mode			
5.	Peak white luminance of the brightest on mode configuration	Х	cd/m²	
6.	Peak white luminance of the normal configuration	х	cd/m²	
7.	Peak white luminance ratio (calculated)	X,X	%	Value row 6 above divided by value row 5 above times 100
	For APD			
8.	Duration of the on mode condition, before the electronic display reaches automatically standby, or off mode, or another condition which does not exceed the applicable power consumption requirements for off mode and/or standby mode.	mm:ss		
	For televisions: the measured value of the time before the television automatically reaches standby, or offmode, or another condition which does not exceed the applicable power consumption requirements for offmode and/or standby-mode following the last user interaction;	mm:ss		

	For televisions equipped with room presence sensor: the measured value of the time before the television automatically reaches standby, or off-mode, or another condition which does not exceed the applicable power consumption requirements for off mode and/or standby mode when no presence is detected;	mm:ss		
	Other electronic displays than televisions and broadcast displays: The measured value of the time before the electronic display automatically reaches standby, or offmode, or another condition which does not exceed the applicable power consumption requirements for off mode and/or standby mode when no input is detected;	mm:ss		
	For ABC			If available and activated by default (as from Annex V, Table 4)
9.	Average on mode power demand of the electronic dis- play at an ambient light intensity, measured at the ABC sensor of the electronic display, of 100 lux and 12 lux.	X,X	W	
10.	Percentage of power reduction due to ABC action between the 100 lux and 12 lux ambient light conditions.	X,X	%	
11.	Display peak white luminance at each of the following ambient light intensities measured at the ABC sensor of the electronic display, 100 lux, 60 lux, 35 lux, 12 lux.	x	cd/m²	
	Measured on mode power at 100 lux ambient light at the ABC sensor	X,X	W	
	Measured on mode power at 12 lux ambient light at the ABC sensor	X,X	W	
	The measured screen luminance at 60 lux ambient light at the ABC sensor	Х	cd/m²	

	Value and precision	Unit	Notes
The measured screen luminance at 35 lux ambient at the ABC sensor	X	cd/m²	
The measured screen luminance at 12 lux ambient light at the ABC sensor	Х	cd/m²	

- (6) Additional information requirements:
  - (a) input terminal for the audio and video test signals used for testing;
  - (b) information and documentation on the instrumentation, set-up and circuits used for electrical testing;
  - (c) any other testing condition not described or determined in point (b);
  - (d) for on mode:
    - ii) the characteristics of the dynamic broadcast-content video signal representing typical broadcast TV content; for the HDR dynamic broadcast content video signal the electronic display must be automatically switched to HDR mode by the HDR metadata of that signal;
    - iii) the sequence of steps for achieving a stable condition with respect to power demand level; and
    - iv) the picture settings used for the brightest peak white luminance measurement and the test pattern for the video signal used for the measurement.
      - (a) For standby and off mode:
    - v) the measurement method used:
    - vi) description of how the mode was selected or programmed including any enhanced reactivation functions; and
    - vii) sequence of events to reach the condition where the electronic display automatically changes mode.
  - (e) For electronic displays with a designated computer signal interface:
    - i) confirmation that the electronic display prioritises the computer display power management protocols set out in point 6.2.3 of Annex II of Commission Regulation (EU) No 617/2013 ). Any deviation from the protocols should be reported;
  - (f) For the networked electronic displays only:
    - i. number and type of network interfaces and, except for wireless network interfaces, their position in the electronic display;
    - ii. whether the electronic display qualifies as electronic display with HiNA functionality; if no information is provided the electronic display is considered not to be HiNA display or display with HiNA functionality; and
    - iii. information whether networked electronic display provides functionality allowing the power management function and/or the end-user to switch the electronic display being in a condition providing networked standby into standby mode, or off mode or another condition which does not exceed the applicable power demand requirements for off

mode and/or standby mode including enhanced reactivation function power allowance where applicable

- (h) For each type of network port:
  - i. the default time (mm:ss) after which the power management function, switches the display into a condition providing networked standby; and
  - ii. the trigger to be used to reactivate the electronic display.
- (7) where the information included in the technical documentation file for a particular electronic display model has been obtained:
  - a) from a model that has the same technical characteristics relevant for the technical information to be provided but is produced by a different manufacturer or
  - b) by calculation on the basis of design or by extrapolation from another model of the same or of a different supplier, or both;

the technical documentation shall include, as appropriate, the details of such calculation, the assessment undertaken by suppliers to verify the accuracy of the calculation and, where appropriate, the declaration of identity between the models of different suppliers; and

(8) the contact details of the person empowered to bind the supplier, if not included in the technical information uploaded into the database, shall be made available, on request, to market surveillance authorities or to the Commission for carrying out their tasks under this Regulation.

# Information to be provided in visual advertisements, in technical promotional material in distance selling and in telemarketing, except distance selling on the internet

- 1. In visual advertisements, for the purposes of ensuring conformity with the requirements laid down in point 1(e) of Article 3 and point (d) of Article 4, the energy efficiency class and the range of efficiency classes available on the label shall be shown as set out in point 4 of this Annex.
- 2. In technical promotional material, for the purposes of ensuring conformity with the requirements laid down in point 1(f) of Article 3 and point (e) Article 4 the energy class and the range of efficiency classes available on the label shall be shown as set out in point 4 of this Annex.
- 3. Any paper-based distance selling must show the energy class and the range of efficiency classes available on the label as set out in point 4 of this Annex.
- 4. The energy efficiency class and the range of energy efficiency classes shall be shown, as indicated in figure below, with:
  - a) an arrow, containing the letter of the energy efficiency class in 100 % white, Calibri Bold and in a font size at least equivalent to that of the price, when the price is shown:
  - b) the colour of the arrow matching the colour of the energy efficiency class;
  - c) the range of available energy efficiency classes in 100 % black; and,
  - d) the size shall be such that the arrow is clearly visible and legible. The letter in the energy efficiency class arrow shall be positioned in the centre of the rectangular part

of the arrow, with a border of 0,5 pt in 100 % black placed around the arrow and the letter of the energy efficiency class.

By way of derogation, if the visual advertisement, technical promotional material or paper-based distance selling is printed in monochrome, the arrow can be in monochrome in that visual advertisement, technical promotional material or paper-based distance selling.

Coloured/monochrome left/right arrow, with range of energy efficiency classes indicated

- 5. Telemarketing-based distance selling must specifically inform the customer of the energy efficiency class of the product and of the range of energy efficiency classes available on the label, and that the customer can access the label and the product information sheet through the product database website, or by requesting a printed copy.
- 6. For all the situations mentioned in points 1 to 3 and 5, it must be possible for the customer to obtain, on request, a printed copy of the label and the product information sheet.

### Information to be provided in the case of distance selling through the internet

- 1. The appropriate label made available by suppliers in accordance with point 1(g) of Article 3 shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the label is clearly visible and legible and shall be proportionate to the size specified in point 2(a) of Annex III. The label may be displayed using a nested display, in which case the image used for accessing the label shall comply with the specifications laid down in point 3 of this Annex. If a nested display is applied, the label shall appear on the first mouse click, mouse rollover or tactile screen expansion on the image.
- 2. The image used for accessing the label in the case of nested display, as indicated in figure below, shall:
  - a) be an arrow in the colour corresponding to the energy efficiency class of the product on the label:
  - b) indicate the energy efficiency class of the product on the arrow in 100 % white, Calibri Bold and in a font size equivalent to that of the price;
  - c) have the range of available energy efficiency classes in 100 % black; and,
  - d) have one of the following two formats, and its size shall be such that the arrow is clearly visible and legible. The letter in the energy efficiency class arrow shall be positioned in the centre of the rectangular part of the arrow, with a visible border in 100 % black placed around the arrow and the letter of the energy efficiency class:

Coloured left/right arrow, with range of energy efficiency classes indicated

- 3. In the case of nested display, the sequence of display of the label shall be as follows:
  - a) the image referred to in point 2 of this Annex shall be shown on the display mechanism in proximity to the price of the product;
  - b) the image shall link to the label set out in Annex III;
  - c) the label shall be displayed after a mouse click, mouse roll-over or tactile screen expansion on the image;
  - d) the label shall be displayed by pop up, new tab, new page or inset screen display;
  - e) for magnification of the label on tactile screens, the device conventions for tactile magnification shall apply;
  - f) the label shall cease to be displayed by means of a close option or other standard closing mechanism; and
  - g) the alternative text for the graphic, to be displayed on failure to display the label, shall be the energy efficiency class of the product in a font size equivalent to that of the price.
- 4. The appropriate product information sheet made available by suppliers in accordance with point 1(h) of Article 3 shall be shown on the display mechanism in proximity to the price of the product. The size shall be such that the product information sheet is clearly visible and legible. The product information sheet may be displayed using a nested display or by referring to the product database in which case the link used for accessing the product information sheet shall clearly and legibly indicate 'Product information sheet'. If a nested display is used, the product information sheet shall appear on the first mouse click, mouse roll-over or tactile screen expansion on the link.

#### 2.12 Environmental Notifications - Customer Hardware Publications

Customer Hardware Publications for Lenovo Logo Deliverables must include specific Environmental Notices. Suppliers providing Lenovo with customer hardware publications must contact their Lenovo Procurement representative or the author of this specification for details.

### 2.13 China VOC (Volatile Organic Compound) Standard Requirements

Four China VOC standards was released at March 2020. Among them, GB 30981-2020, GB 33372-2020 and GB 38508-2020 will take effect in December 2020, GB 38507-2020 will take effect in April 2021. All the coatings, inks, adhesive and cleaning agents used in Lenovo products, packaging and the production process must meet those national standards' requirements in China. Testing reports in accordance with the standard requirements are required and must be supplied to Lenovo as requested.

28June2020 Page 145 of 190 Version 7.8

- GB 30981-2020, Limit of harmful substances of industrial protective coatings
- GB 38507-2020, Limits of volatile organic compounds (VOCs) in printing ink
- GB 33372-2020, Limit of volatile organic compounds content in adhesive
- GB 38508-2020, Limit of volatile organic compounds content in cleaning agents

#### Limit of harmful substances of industrial protective coatings (GB 30981-2020)

All coatings excepted the special functional coatings defined in 5.1 of GB 30981-2020 used in Lenovo products, the production process must meet the VOCs limitation as below:

Paint type	Main paint t		type	VOCs Limits (g/L)
Water-based coating	Water-based coating			≦420
		Color paint		≦420
		Varnish		≦420
Solvent based coating	Solvent based coating			≦600
		Color paint		≦700
				≦650
Solvent-free coating				≦100
Radiation cured	Water-based		Spraying	≦400
coating			Others	≦150
County	Non-water-based		Spraying	≦550
			Others	≦200

All coatings used in Lenovo products, packaging and the production process must meet the other hazardous substances requirements as below:

Item	Limitation
Benzene (CAS 71-43-2)	Prohibited above 0.3% in solvent based coatings and
	non-water-based radiation cured coatings
Sum of toluene (CAS 108-88-3) and xylene (CAS	Prohibited above 35% in solvent based coatings and
1330-20-7), (including Ethyl benzene (CAS 100-	non-water-based radiation cured coatings
41-4))	_
Sum of Halogenated hydrocarbon	Prohibited above 1% in solvent based coatings and
(Methylene chloride (CAS 75-09-2),	non-water-based radiation cured coatings.
trichloromethane (CAS 67-66-3),	
Carbon tetrachloride (CAS 56-23-5),	
1, 1-dichloroethane (CAS 75-34-3),	
1, 2-dichloroethane (CAS 107-06-2),	
1,1,1-trichloroethane (CAS 71-55-6),	
1,1,2-trichloroethane (CAS 79-00-5),	
1, 2-dichloropropane (CAS 78-87-5),	
1,2,3-trichloropropane (CAS 96-18-4),	

	T T
trichloroethylene (CAS 79-01-6),	
tetrachloroethylene (CAS 127-18-4))	
Sum of PAH (only naphthalene (CAS 91-20-3)	Prohibited above 500 mg/kg in solvent based
and anthracene (CAS 120-12-7))	coatings and non-water-based radiation cured
	coatings
Methanol (CAS 67-56-1)	Prohibited above 1% in solvent-free coatings
Sum of Ethylene glycol ether and Ether ester	Prohibited above 1% in water-based coating, solvent
(2-Methoxyethanol (CAS 109-86-4),	based coatings and radiation cured coatings
2-Methoxyethyl acetate (CAS 110-49-6),	
2-Ethoxyethanol (CAS 110-80-5),	
2-Ethoxyethyl acetate (CAS 111-15-9),	
1,2-Dimethoxyethane (CAS 110-71-4),	
1,2-Diethoxyethane (CAS 629-14-1),	
2-Methoxyethyl ether (CAS 111-96-6),	
Triethylene glycol dimethyl ether (CAS 112-49-	
2))	

#### Limits of volatile organic compounds (VOCs) in printing ink (GB 38507-2020)

All inks used in Lenovo products, packaging and the production process must meet the VOCs limitation as below:

Printing Ink Type			VOCs Limits (%)			
Solvent-based ink	Gravure ink	Gravure ink				
	Flexographic ink		≦75			
	Ink-jet ink		≦95			
	Screen ink		≦75			
Water-based ink	Gravure ink	Absorbent substrate	≦15			
		Nonabsorbent substrate	≦30			
	Flexographic ink	Absorbent substrate	≦5			
		Nonabsorbent substrate	≦25			
	Ink-jet ink	Ink-jet ink				
	Screen ink		≦30			
Offset ink	Sheet-fed offset ink		≦3			
	Cold-set web-fed ink	Cold-set web-fed ink				
	Heat-set web-fed ink	Heat-set web-fed ink				
Energy curing ink	Offset ink		≦2			
	Flexographic ink	Flexographic ink				
	Screen ink	Screen ink				
	Ink-jet ink	Ink-jet ink				
	Gravure ink					
Intaglio ink			≦20			

Below solvents are prohibited to be added in printing inks which used in Lenovo products, packaging and the production process:

Substances Name	CAS No
Halogenated hydrocarbon	-
Ethyl benzene	100-41-4

Methyloxirane	75-56-9
styrene	100-42-5
benzene	71-43-2
Isopropyl nitrite	541-42-4
Butyl nitrite	544-16-1
2-ethoxyethanol	110-80-5
2-ethoxyethyl acetate	111-15-9
2-methoxyethanol	109-86-4
2-Methoxy acetate	110-49-6
2-nitropropane	79-46-9
1-Methyl-2-pyrrolidone (NMP)	872-50-4
1,2-bis(2-methoxyethoxy)ethane (TEGDME; triglyme)	112-49-2
1, 2-dimethoxyethane; ethylene glycol dimethyl ether (EGDME)	110-71-4
1,2-diethoxyethane	629-14-1
toluene	108-88-3
xylene	1330-20-7

### Limit of volatile organic compounds content in adhesive (GB 33372-2020)

Solvent-based adhesive used in Lenovo products, packaging and the production process must meet the VOCs limitation as below:

	VOCs Limits (g/L) $\leq$					
Application	Neoprene	Styrene-butadiene-styrene	polyurethanes	Acrylates	Others	
field		block copolymer rubber				
Case & bag	600	500	400	-	400	
packaging	600	500	400	510	500	
others	600	500	250	510	250	

Water-based adhesive used in Lenovo products, packaging and the production process must meet the VOCs limitation as below:

Application	VOCs Limits $(g/L) \le$						
field	Polyvinyl acetate	Polyvinyl alcohol	rubber	polyurethanes	Vinyl acetate - ethylene copolymer emulsions	Acrylates	Others
Case & bag	50	-	150	50	50	100	50
packaging	50	-	50	50	50	50	50
others	50	50	50	50	50	50	50

Bulk adhesive used in Lenovo products, packaging and the production process must meet the VOCs limitation as below:

Application field		VOCs Limits (g/L) $\leq$							
rieid	Organic silicon	MS	polyurethanes	Polysulfide	Acrylates	Epoxy resins	a- cyanoacrylate	Thermoplastic	others
Case & bag	-	50	50	-	-	-	20	50	50
packaging	100	50	50	-	-	-	-	50	50
others	100	50	50	50	200	50	20	50	50

Adhesive used in case and bags need to meet below limitations of GB 19340:

Substances	Limitation
Benzene (CAS 71-43-2)	Prohibited above 5g/kg in solvent based adhesive in
	case and bags
Sum of toluene (CAS 108-88-3) & xylene (CAS 1330-20-7)	Prohibited above 200g/kg in solvent based adhesive
	in case and bags.
Free toluene diisocyanate (CAS 471-62-5)	Prohibited above 10g/kg in solvent based adhesive
	in case and bags
n-Hexane (CAS 110-54-3)	Prohibited above 150g/kg in solvent based adhesive
	in case and bags
1,2-Dichloroethane (CAS 107-06-2)	Prohibited above 5g/kg in solvent based adhesive in
	case and bags
Sum of Halogenated hydrocarbon	Prohibited above 50g/kg in solvent based adhesive
(including 1,2-Dichloroethane (CAS 107-06-2), Methylene	in case and bags
Chloride (CAS 75-09-2), 1,1,1-trichloroethane (CAS 71-55-	
6), 1,1,2-trichloroethane (CAS 79-00-5))	

#### Limit of volatile organic compounds content in cleaning agents (GB 38508-2020)

All cleaning agents used in Lenovo products, packaging and the production process must meet the VOCs and other specific chemical limits as below:

VOCs and Other Specific Chemical Limits in Cleaning Agent

Contents	Limits				
	Water-based	Semi-water-based	Solvent-based		
$VOCs(g/L) \le$	50	300	900		
Dichloromethane (CAS 75-09-2), Trichloromethane (CAS 67-66-3),	0.5	2	20		
Trichloroethylene (CAS 79-01-6),					
Tetrachloroethylene (CAS 127-18-4) in total $/\% \le$					
Formaldehyde (CAS 50-00-0) (g/kg) ≤	0.5	0.5	-		
Benzene (CAS 71-43-2), toluene (CAS 108-88-3), xylene (CAS 100-41-4) and ethylbenzene (BTEX) (CAS 1330-20-7) in total $/\% \le$	0.5	1	2		

Low-VOCs Limits of Semi-Water-Based Cleaning Agents

	5 5	
Contents	Limits	

VOCs (g/L) ≤	100
Dichloromethane (CAS 75-09-2),	0.5
Trichloromethane (CAS 67-66-3),	
Trichloroethylene (CAS 79-01-6),	
tetrachloroethylene (CAS 127-18-4) in total	
/ % ≤	
Formaldehyde (CAS 50-00-0) (g/kg) ≤	0.5
Benzene (CAS 71-43-2), toluene (CAS	0.5
108-88-3), xylene (CAS 100-41-4) and	
ethylbenzene (BTEX) (CAS 1330-20-7)	
in total / % ≤	

#### 3.0 Notification Procedures

If the Material, Part, or Product being supplied to Lenovo does not meet one or more of the applicable requirements in this ES, the supplier must immediately notify the Lenovo procurement representative. This also applies if the supplier or a subcontractor(s) makes changes in their operations that will cause a Material, Part, or Product to no longer comply with this ES. If any Material, Part, or Product contains any substances in applications restricted by **Tables 1 or 2**, or contains any mercury, suppliers must immediately report such information to their Lenovo procurement representative.

#### **ANNEXES: Detailed Chemical Lists with CAS Numbers**

Unless specifically indicated as complete for the chemicals affected, these annex listings are not exhaustive.

#### Annex A. Asbestos

Asbestos	1332-21-4
Actinolite	77536-66-4
Amosite (Grunerite)	12172-73-5
Anthophyllite	77536-67-5
Chrysotile	12001-29-5
Crocidolite	12001-28-4
Tremolite	77536-68-6

#### **Annex B. Azo colorants**

Note: The EC azo dyes ban applies to:

1.) Certain azo colorants that by reductive cleavage of azo groups may release one of the following 22 aromatic amines, and 2.) The Azodye compound listed in the second table of this annex.

1. List of regulated aromatic amines	
biphenyl-4-ylamine	92-67-1
benzidine	92-87-5
4-chloro-o-toluidine	95-69-2
2-naphthylamine	91-59-8
o-aminoazotoluene	97-56-3
5-nitro-o-toluidine	99-55-8
4-chloroaniline	106-47-8
4-methoxy-m-phenylenediamine	615-05-4
4,4'-methylenedianiline	101-77-9
3,3'-dichlorobenzidine	91-94-1
3,3'-dimethoxybenzidine	119-90-4
3,3'-dimethylbenzidine	119-93-7
4,4'-methylenedi-o-toluidine	838-88-0
6-methoxy-m-toluidine	120-71-8
4,4'-methylene-bis(2-chloroaniline)	101-14-4
4,4'-oxydianiline	101-80-4
4,4'-thiodianiline	139-65-1
o-toluidine	95-53-4
4-methyl-m-phenylenediamine	95-80-7
2,4,5-trimethylaniline	137-17-7
o-anisidine	90-04-0
4-amino azobenzene	60-09-3
2. List of regulated azodyes	
mixture of	
Disodium- (6- (4- anisidino) -3- sulfonato -2- ( 3,5- dinitro- 2-	118685-33-9
oxidophenylazo) -1-naphtholato) (1- (5-chloro -2-oxidophenylazo) -2-	
naphtholato) chromate (1-); (molecular formula C39H23ClCrN7O12S.2Na);	
Trisodium bis (6- (4-anisidino) -3- sulfonato -2- (3,5- dinitro-2-	Not available
oxidophenylazo) -1- naphtholato)	THOI AVAIIADIE
chromate(1-) (molecular formula C46H30CrN10O20S2.3Na)	

#### Annex C. Halogenated aromatic substances

Polychlorinated biphenyls (PCB)(Note: PCBs are prohibited by	See Annex H
other regulations, see PCBs in Table 1 and Annex H)	

Halogenated diarylalkanes -	
Monomethyl tetrachloro diphenyl methane	76253-60-6
ade name: Ugilec 141	
Monomethyl dichloro diphenyl methane	81161-70-8
Trade name: Ugilec 121, Ugilec 21	
Monomethyl dibromo dipenyl methane	99688-47-8
Trade name: DBBT	
Halogenated benzenes -	
Chlorobenzene (Monochlorobenzene, MCB)	108-90-7
Dichlorobenzene, 1,2- (ortho-DCB)	95-50-1
Dichlorobenzene, 1,4- (para-DCB)	106-46-7
Pentachlorobenzene	608-93-5
Tetrachlorobenzene, 1, 2, 4, 5-	95-94-3
Tetrachlorobenzene, 1, 2, 3, 5-	634-90-2
Tetrachlorobenzene, 1, 2, 3, 4-	634-66-2
Trichlorobenzene, 1, 2,4 -	120-82-1
Trichlorobenzene, 1, 2, 3-	87-61-6
Hexachlorobenzene	<del>118 74 1</del>

### Annex D. Halogenated diphenyl methanes

Monomethyl tetrachloro diphenyl methane	76253-60-6
ade name: Ugilec 141	
Monomethyl dichloro diphenyl methane	81161-70-8
Trade name: Ugilec 121, Ugilec 21	
Monomethyl dibromo dipenyl methane	99688-47-8
Trade name: DBBT	

#### Annex E. Nickel

Nickel	7440-02-0
Nickelacetate	373-02-4
Nickelcarbonate	3333-67-3

Notes	

#### Notes:

#### **Annex G. Perfluorocarbons (PFC)**

Carbon tetrafluoride	75-73-0
Perfluoroethane	76-16-4

#### Annex H. Polychlorinated biphenyls (PCBs)

Polychlorinated Biphenyls	1336-36-3
Aroclor	12767-79-2
Chlorodiphenyl (Aroclor 1260)	11096-82-5
Kanechlor 500	27323-18-8
Aroclor 1254	11097-69-1
Terphenyls	26140-60-3

#### Annex I. Polychlorinated naphthalenes

Polychlorinated Naphthalenes	70776-03-3
------------------------------	------------

#### **Annex J. Shortchain Chlorinated Paraffins**

Only short-chain chlorinated paraffins with carbon length of 10-13 atoms are covered.

Chlorinated paraffins (C10-13)	85535-84-8
Other Short Chain Chlorinated Paraffins	-

<sup>&</sup>lt;sup>1</sup> Manufacturing processes do not include facilities equipment or systems such as chillers and fire suppression systems.

<sup>&</sup>lt;sup>2</sup> DR denotes a deleted registry number that was replaced with another registry number.

<sup>&</sup>lt;sup>3</sup> Chemical to which Chemical Abstract Service (CAS) assigned registry number based on premise that it was a trade name, although chemical may be the same as another one already listed.

### Annex K. Tributyl tin oxide (TBTO)

Bis(tri-n-butyltin) oxide	56-35-9

### Annex L. Cadmium/Cadmium Compounds

Cadmium	7440-43-9
Cadmium oxide	1306-19-0
Cadmium sulfide	1306-23-6
Cadmium chloride	10108-64-2
Cadmium sulfate	10124-36-4
Other cadmium compounds	-

#### **Annex M. Chromium VI Compounds**

Chromium (VI) oxide	1333-82-0
Barium chromate	10294-40-3
Calcium chromate	13765-19-0
Chromic acetate	1066-30-4
Chromium trioxide	1333-82-0
Lead (II) chromate	7758-97-6
Sodium chromate	7775-11-3
Sodium dichromate	10588-01-9
Strontium chromate	7789-06-2
Potassium dichromate	7778-50-9
Potassium chromate	7789-00-6
Zinc chromate	13530-65-9

### Annex N. Lead/Lead Compounds

	1
Lead	7439-92-1
Lead (II) sulfate	7446-14-2
Lead (II) carbonate	598-63-0
Lead hydrocarbonate	1319-46-6
Lead acetate	301-04-2
Lead (II) acetate, trihydrate	6080-56-4
Lead phosphate	7446-27-7
Lead selenide	12069-00-0
Lead (IV) oxide	1309-60-0
Lead (II,IV) oxide	1314-41-6
Lead (II) sulfide	1314-87-0
Lead (II) oxide	1317-36-8
Lead (II) carbonate basic	1319-46-6
Lead hydroxidcarbonate	1344-36-1
Lead (II) phosphate	7446-27-2
Lead (II) chromate	7758-97-6
Lead (II) titanate	12060-00-3
Lead sulfate, sulphuric acid, lead salt	15739-80-7
Lead sulphate, tribasic	12202-17-4
Lead stearate	1072-35-1
Other lead compounds	-

### **Annex O. Mercury / Mercury Compounds**

Mercury	7439-97-6
Mercuric chloride	33631-63-9
Mercury (II) chloride	7487-94-7
Mercuric sulfate	7783-35-9
Mercuric nitrate	10045-94-0
Mercuric (II) oxide	21908-53-2
Mercuric sulfide	1344-48-5
Other mercury compounds	-

#### Annex P. Polybrominated biphenyls (PBBs) including all congeners and isomers

2-Bromobiphenyl	2052-07-05
3-Bromobiphenyl	211-57-7
4-Bromobiphenyl	92-66-0
Decabromobiphenyl	13654-09-06
Dibromobiphenyl	92-86-4
Heptabromobiphenyl	35194-78-6
Hexabromobiphenyl	59080-40-9, 36355-01-8, 67774-32-7
Nonabromobiphenyl	27753-52-2
Octabromobiphenyl	61288-13-9
Pentabromobiphenyl	56307-79-0
Polybrominated Biphenyl	59536-65-1
Tetrabromobiphenyl	40088-45-7
Tribromobiphenyl	59080-34-1
Firemaster FF-1	67774-32-7

### Annex Q. Polybrominated diphenyl ethers (PBDEs) including all congeners and isomers

Bromodiphenyl Ether	101-55-3
Decabromodiphenyl Ether	1163-19-5
Dibromodiphenyl Ether	2050-47-7
Heptabromodiphenyl Ether	68928-80-3
Hexabromodiphenyl Ether	36483-60-0
Nonabromodiphenyl Ether	63936-56-1
Octabromodiphenyl Ether	32536-52-0
Pentabromodiphenyl Ether	32534-81-9
Tetrabromodiphenyl Ether	40088-47-9
Tribromodiphenyl Ether	49690-94-0

#### Annex R. Antimony/Antimony Compounds

Antimony (metallic)	7440-36-0
Antimony trioxide	1309-64-4
Antimony pentoxide	1314-60-9
Antimony trichloride	10025-91-9
Sodium antimonate	15432-85-6
Other antimony compounds	-

#### Annex S. Arsenic/Arsenic Compounds

Arsenic	7440-38-2

Gallium arsenide	1303-00-0
Calcium arsenate	7778-44-1
Calcium arsenite	27152-57-4
Arsenic pentoxide	1303-28-2
Arsenic trioxide	1327-53-3
Potassium arsenite	10124-50-2
Potassium arsenate	7784-41-0
Lead arsenate	3687-31-8
Other arsenic compounds	-

### Annex T. Beryllium/Beryllium Compounds

Beryllium	7440-41-7
Beryllium-aluminum alloy	12770-50-2
Beryllium chloride	7787-47-5
Beryllium fluoride	7787-49-7
Beryllium hydroxide	13327-32-7
Beryllium oxide	1304-56-9
Beryllium phosphate	13598-15-7
Beryllium sulfate	13510-49-1
Beryllium sulfate tetrahydrate	7787-56-6
Beryl ore	1302-52-9
Other beryllium compounds	-

### Annex U. Bismuth/Bismuth Compounds and Alloys

Bismuth	7440-69-9
Bismuth trioxide	1304-76-3
Bismuth nitrate	10361-44-1
Other bismuth compounds	-

### Annex V. Brominated Flame Retardants (other than PBB or PBDE)

Poly(2,6-dibromo-phenylene oxide)	69882-11-7
Tetra-decabromo-diphenoxy-benzene	58965-66-5
1,2-Bis(2,4,6-tribromo-phenoxy) ethane	37853-59-1
3,5,3',5'-Tetrabromo-bisphenol A (TBBA)	79-94-7
TBBA carbonate oligomer, 2,4,6-tribromo-phenol terminated	71342-77-3
TBBA carbonate oligomer, phenoxy end capped	94334-64-2
TBBA carbonate oligomer	28906-13-0
TBBA-TBBA-diglycidyl-ether oligomer	70682-74-5
TBBA-epichlorhydrin oligomer	40039-93-8
TBBA, unspecified	30496-13-0
Brominated epoxy resin end-capped with tribromophenol	139638-58-7
Brominated epoxy resin end-capped with tribromophenol	135229-48-0
TBBA-(2,3-dibromo-propyl-ether)	21850-44-2
TBBA bis-(2-hydroxy-ethyl-ether)	4162-45-2
TBBA-bis-(allyl-ether)	25327-89-3
TBBA-dimethyl-ether	37853-61-5
Tetrabromo-bisphenol S	39635-79-5
TBBS-bis-(2,3-dibromo-propyl-ether)	42757-55-1
2,4-Dibromo-phenol	615-58-7
2,4,6-tribromo-phenol	118-79-6

	1,400 =4.0
Pentabromo-pheno	1 608-71-9
2,4,6-Tribromo-phenyl-allyl-ether	3278-89-5
Tribromo-phenyl-allyl-ether, unspecified	26762-91-4
Bis(2-ethylhexyl)tetrabromo-phthalate	26040-51-7
2-Hydroxy-propyl-2-(2-hydroxy-ethoxy)-ethyl-TBP	20566-35-2
TBPA, glycol-and propylene-oxide esters	75790-69-1
N,N'-Ethylene –bis-(tetrabromo-phthalimide)	32588-76-4
Ethylene-bis(5,6-dibromo-norbornane-2,3-dicarboximide)	52907-07-0
2,3-Dibromo-2-butene-1,4-diol	3234-02-4
Dibromo-neopentyl-glycol	3296-90-0
Dibromo-propanol	96-13-9
Tribromo-neopentyl-alcohol	36483-57-5
Poly tribromo-styrene	57137-10-7
Tribromo-styrene	61368-34-1
Dibromo-styrene grafted PP	171091-06-8
Poly-dibromo-styrene	31780-26-4
Bromo-/Chloro-paraffins	68955-41-9
Bromo-/Chloro-alpha-olefin	82600-56-4
Vinylbromide	593-60-2
Tris-(2,3-dibromo-propyl)-isocyanurate	52434-90-9
Tris(2,4-Dibromo-phenyl) phosphate	49690-63-3
Tris(tribromo-neopentyl) phosphate	19186-97-1
Chlorinated and brominated phosphate ether	125997-20-8
Pentabromo-toluene	87-83-2
Pentabromo-benzyl bromide	38521-51-6
1,3-Butadiene homopolymer,brominated	68441-46-3
Pentabromo-benzyl-acrylate, monomer	59447-55-1
Pentabromo-benzyl-acrylate, polymer	59447-57-3
Decabromo-diphenyl-ethane	84852-53-9
Tribromo-bisphenyl-maleinimide	59789-51-4
Brominated trimethylphenyl-lindane	59789-51-4
Other Brominated Flame Retardants	-
Hexabromo-cyclo-dodecane (HBCD), unspecified	3194-55-6
Tetrabromo-cyclo-octane	31454-48-5
1,2-Dibromo-4-(1,2 dibromo-methyl)-cyclo-hexane	3322-93-8
TBPA Na salt	25357-79-3
Tetrabromo phthalic anhydride	632-79-1

#### Annex W. Magnesium/Magnesium Alloys

Magnesium	7439-95-4
Other magnesium alloys	-

#### **Annex X. Phthalates**

Bis (2-ethylhexyl) phthalate (DEHP)	117-81-7
Dibutylphthalate (DBP)	84-74-2
Bis(2-methoxyethyl) phthalate (DBP)	117-82-8

### **Annex Y. Polyvinyl Chloride**

Polyvinyl chloride (PVC)	9002-86-2

#### Annex Z. Radioactive Substances

Uranium	7440-61-6
Plutonium	7440-07-5
Radon	10043-92-2
Americium	7440-35-9
Thorium	7440-29-1
Cesium	7440-46-2
Strontium	7440-24-6
Other radioactive substances	-

### Annex AA. Selenium/Selenium Compounds

Selenium	7782-49-2
Hydrogen selenide	7783-07-5
Sodium selenide	1313-85-5
Selenium dioxide	7446-08-4
Sodium selenate	10112-94-4
Dimethyl selenide	593-79-3
Selenium oxide	12640-89-0
Other selenium compounds	-

### Annex BB. Tributyl Tin, Triphenyl Tin

	T
Tributyltin	688-73-3
Tributyltin oxide	56-35-9
Tributyltin benzoate	4342-36-3
Tributyl tin bromide	1461-23-0
Tributyltin linoleate	24124-25-2
Tributyltin methacrylate	2155-70-6
Triphenyl tin	668-34-8
Triphenyltin N,N'-dimethyldithiocarbamate	1803-12-9
Triphenyltin fluoride	379-52-2
Triphenyltin acetate	900-95-8
Triphenyltin chloride	639-58-7
Triphenyltin hydroxide	76-87-9
Triphenyltin fatty acid salts (C=9-11)	47672-31-1
Triphenyltin chloroacetate	7094-94-2
Tributyltin methacrylate	2155-70-6
Bis(tributyltin) fumarate	6454-35-9
Tributyltin fluoride	1983-10-4
Bis(tributyltin) 2,3-dibromosuccinate	31732-71-5
Tributyltin acetate	56-36-0
Tributyltin laurate	3090-36-6
Bis(tributyltin) phthalate	4782-29-0
Copolymer of alkyl acrylate, methyl	
methacrylate and tributyltin	
methacrylate(alkyl, C=8)	67772-01-4
Tributyltin sulfamate	6517-25-5
Bis(tributyltin) maleate	14275-57-1
Tributyltin chloride	1461-22-9,7342-38-3
Mixture of tributyltin	
cyclopentanecarboxylate and its analogs	
(Tributyltin	
naphthenate)	-
Tributyltin cyclopentane carbonate=mixture	5409-17-2

Triphenyltin fatty acid ((9-11) salt)	18380-71-7,18380-72-8,47672-31-1,94850-90-5
Mixture of tributyltin	26239-64-5
1,2,3,4,4a,4b,5,6,10,10a-decahydro -7-	
isopropyl- 1,4a- dimethyl-1-	
phenanthrenecarboxylate and its analogs	
(Tributyltin rosin salt)	
Tributyltin naphthenate	85409-17-2
Other Tributyl Tins & Triphenyl Tins	-

#### Annex CC. Polycyclic Aromatic Hydrocarbons

Acenaphthene	83-32-9
	208-96-8
Acenaphthylene	
Anthracene	120-12-7
Benzo(a)anthracene	56-55-3
Benzo(a)pyrene	50-32-8
Benzo(b)fluoranthene	205-99-2
Benzo(e)pyren	192-97-2
Benzo(g,h,i)perylene	191-24-2
Benzo(j)fluoranthene	205-82-3
Benzo(k)fluoranthene	207-08-9
Chrysene	218-01-9
Dibenzo(a,h)anthracene	53-70-3
Fluoranthene	206-44-0
Fluorene	86-73-7
Indeno(1,2,3-c,d)pyrene	193-39-5
Naphthalene	91-20-3
Phenanthrene	81-5-8
Pyrene	129-00-0

# Annex DD. SVHC Candidate List (current as of the date of this specification, current list maintained by ECHA at <a href="http://echa.europa.eu/web/guest/candidate-list-table">http://echa.europa.eu/web/guest/candidate-list-table</a>)

Substance name	CAS No.
Dibutylbis(pentane-2,4-dionato-O,O')tin	22673-19-4
butyl 4-hydroxybenzoate	94-26-8
2-methylimidazole	693-98-1
1-vinylimidazole	1072-63-5
Perfluorobutane sulfonic acid (PFBS) and its salts	-
N,N,N,-triethylethanaminium 1,1,2,2,3,3,4,4,4-nonafluorobutane-1-sulfonate	
Magnesium perfluorobutane sulfonate; PFBS	25628-08-4
1-Butanesulfonic acid, 1,1,2,2,3,3,4,4,4-nonafluoro-, lithium salt (1:1)	507453-86-3
Morpholinium perfluorobutane sulfonate; PFBS	131651-65-5
Ammonium 1,1,2,2,3,3,4,4,4-nonafluorobutane-1-sulphonate	503155-89-3
Sulfonium, dimethylphenyl-, salt with 1,1,2,2,3,3,4,4,4-nonafluoro-1-butanesulfonic acid(1:1)	68259-10-9
Sulfonium, triphenyl-, salt with 1,1,2,2,3,3,4,4,4-nonafluoro-1-butanesulfonic acid(1:1)	220133-51-7
Potassium 1,1,2,2,3,3,4,4,4-nonafluorobutane-1-sulphonate	144317-44-2
tetrabutyl-phosphonium nonafluoro-butane-1-sulfonate	29420-49-3
	220689-12-3

Diisohexyl phthalate	71850-09-4
2-methyl-1-(4-methylthiophenyl)-2-morpholinopropan-1-one	71868-10-5
2-benzyl-2-dimethylamino-4'-morpholinobutyrophenone	119313-12-1
Tris(4-nonylphenyl, branched and linear) phosphite (TNPP) with ≥ 0.1% w/w of 4-nonylphenol, branched and linear (4-NP) tris(4-nonylphenyl, branched) phosphite	-
Phenol, 4-nonyl-, phosphite (3:1)	3050-88-2
Tris(nonylphenyl) phosphite	26523-78-4
4-tert-butylphenol	98-54-4
2-methoxyethyl acetate	110-49-6
2,3,3,3-tetrafluoro-2-(heptafluoropropoxy)propionic acid, its salts and its acyl halides 2,3,3,3-tetrafluoro-2-(heptafluoropropoxy)propionic acid Ammonium 2,3,3,3-tetrafluoro-2-(heptafluoropropoxy)propionate Potassium 2,3,3,3-tetrafluoro-2-(heptafluoropropoxy)propionate 2,3,3,3-tetrafluoro-2-(heptafluoropropoxy)propionyl fluoride	- 13252-13-6 62037-80-3 67118-55-2 2062-98-8
Pyrene	129-00-0
Phenanthrene	85-01-8
Fluoranthene	206-44-0
Benzo[k]fluoranthene	207-08-9
2,2-bis(4'-hydroxyphenyl)-4-methylpentane	6807-17-6
1,7,7-trimethyl-3-(phenylmethylene)bicyclo[2.2.1]heptan-2-one	15087-24-8
Terphenyl, hydrogenated	61788-32-7
Octamethylcyclotetrasiloxane	556-67-2
Lead	7439-92-1
Ethylenediamine	107-15-3
Dodecamethylcyclohexasiloxane	540-97-6
Disodium octaborate	12008-41-2
Dicyclohexyl phthalate	84-61-7
Decamethylcyclopentasiloxane	541-02-6
Benzo[ghi]perylene	191-24-2
Benzene-1,2,4-tricarboxylic acid 1,2 anhydride	552-30-7
Reaction products of 1,3,4-thiadiazolidine-2,5-dithione, formaldehyde and 4-heptylphenol, branched and linear (RP-HP)	-
Reaction product of 1,3,4-thiadiazolidine-2,5-dithione, formaldehyde and phenol, heptyl derivs. Formaldehyde, reaction products with branched and linear heptylphenol, carbon disulfide and hydrazine	93925-00-9
Chrysene	218-01-9
Cadmium nitrate	10325-94-7
Cadmium hydroxide	21041-95-2
Cadmium carbonate	513-78-0
Benz[a]anthracene	56-55-3

1,6,7,8,9,14,15,16,17,17,18,18-Dodecachloropentacyclo[12.2.1.16,9.02,13.05,10]octadeca-7,15-diene	-
("Dechlorane Plus" <sup>TM</sup> ) 1,6,7,8,9,14,15,16,17,17,18,18-dodecachloropentacyclo[12.2.1.16,9.02,13.05,10]octadeca-7,15-diene	13560-89-9
rel-(1R,4S,4aS,6aS,7S,10R,10aR,12aR)-1,2,3,4,7,8,9,10,13,13,14,14-dodecachloro-	
1,4,4a,5,6,6a,7,10,10a,11,12,12a-dodecahydro-1,4:7,10-dimethanodibenzo[a,e]cyclooctene	-
rel-(1R,4S,4aS,6aR,7R,10S,10aS,12aR)-1,2,3,4,7,8,9,10,13,13,14,14-dodecachloro-	-
1,4,4a,5,6,6a,7,10,10a,11,12,12a-dodecahydro-1,4:7,10-dimethanodibenzo[a,e]cyclooctene	
Perfluorohexane-1-sulphonic acid and its salts Perfluorohexane-1-sulphonic acid	355-46-4
Ammonium perfluorohexane-1-sulphonate	68259-08-5
Tridecafluorohexanesulphonic acid, compound with 2,2'-iminodiethanol (1:1)	70225-16-0
Potassium perfluorohexane-1-sulphonate	3871-99-6
p-(1,1-dimethylpropyl)phenol	80-46-6
Nonadecafluorodecanoic acid (PFDA) and its sodium and ammonium salts	-
Decanoic acid, nonadecafluoro-, sodium salt	3830-45-3
Nonadecafluorodecanoic acid	335-76-2
Ammonium nonadecafluorodecanoate	3108-42-7
4-heptylphenol, branched and linear	70624 02 2
Phenol, heptyl derivs. 4-heptylphenol	72624-02-3 1987-50-4
4.4'-isopropylidenediphenol	80-05-7
1 12 1	
Benzo[def]chrysene (Benzo[a]pyrene)	50-32-8
Perfluorononan-1-oic-acid and its sodium and ammonium salts	-
Ammonium salts of perfluorononan-1-oic-acid	4149-60-4
Perfluorononan-1-oic-acid Sodium salts of perfluorononan-1-oic-acid	375-95-1 21049-39-8
Nitrobenzene	98-95-3
2-(2H-benzotriazol-2-yl)-4-(tert-butyl)-6-(sec-butyl)phenol (UV-350)	36437-37-3
2,4-di-tert-butyl-6-(5-chlorobenzotriazol-2-yl)phenol (UV-327)	3864-99-1
1,3-propanesultone	1120-71-4
5-sec-butyl-2-(2,4-dimethylcyclohex-3-en-1-yl)-5-methyl-1,3-dioxane [1], 5-sec-butyl-2-(4,6-	-
dimethylcyclohex-3-en-1-yl)-5-methyl-1,3-dioxane [2] 1,3-Dioxane, 2-(2,4-dimethyl-3-cyclohexene-1-yl)-5-methyl-5-(1-methylpropyl)-	117933-89-8
2-(2,4-Dimethylcyclohex-3-ene-1-yl)-5-methyl-(1-methylpropyl)-1,3-dioxane	117933-89-8
Reaction mass of 5-[(2R)-butan-2-yl]-2-[(1R,2R)-2,4-dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane	11/933-09-0
and 5-[(2R)-butan-2-yl]-2-[(1R,2S)-2,4-dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane and 5-[(2R)-	
butan-2-yl]-2-[(1S,2R)-2,4-dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane and 5-[(2R)-butan-2-yl]-2-	
[(1S,2S)-2,4-dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane and 5-[(2S)-butan-2-yl]-2-[(1S,2R)-2,4-dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane and 5-[(2S)-butan-2-yl]-2-[(1S,2R)-2,4-dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane and 5-[(2S)-butan-2-yl]-2-[(1S,2R)-2,4-dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane and 5-[(2S)-butan-2-yl]-2-[(1S,2R)-2,4-dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane and 5-[(2S)-butan-2-yl]-2-[(1S,2R)-2,4-dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane and 5-[(2S)-butan-2-yl]-2-[(1S,2R)-2,4-dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane and 5-[(2S)-butan-2-yl]-2-[(1S,2R)-2,4-dimethylcyclohex-3-en-1-yl]-2-[(1S,2R)-2,4-dimethylcyclohex-3-en-1-yl]-3-[(1S,2R)-2,	
$\label{eq:continuous} dimethylcyclohex-3-en-1-yl]-5-methyl-1, 3-dioxane \qquad \qquad 5-[(2S)-butan-2-yl]-2-[(1S,2S)-2,4-dioxane]$	
dimethylcyclohex-3-en-1-yl]-5-methyl-1,3-dioxane	
5-sec-butyl-2-(2,4-dimethylcyclohex-3-en-1-yl)-5-methyl-1,3-dioxane	-
5-sec-butyl-2-(4,6-dimethylcyclohex-3-en-1-yl)-5-methyl-1,3-dioxane 1,2-benzenedicarboxylic acid, di-C6-10-alkyl esters or mixed decyl and hexyl and octyl diesters	<u> </u>
1,2-benzenedicarboxylic acid, di-C6-10-aikyl esters or mixed decyl and nexyl and octyl diesters 1,2-Benzenedicarboxylic acid, mixed decyl and hexyl and octyl diesters	- 68648-93-1
1,2-Benzenedicarboxylic acid, di-C6-10-alkyl esters	68515-51-5
Reaction mass of 2-ethylhexyl 10-ethyl-4,4-dioctyl-7-oxo-8-oxa-3,5-dithia-4-stannatetradecanoate and 2-	-
ethylhexyl 10-ethyl-4-[[2-[(2-ethylhexyl)oxy]-2-oxoethyl]thio]-4-octyl-7-oxo-8-oxa-3,5-dithia-4-	
stannatetradecanoate (reaction mass of DOTE and MOTE)	
Cadmium sulphate	10124-36-4,
	31119-53-6
Cadmium fluoride	7790-79-6
2-ethylhexyl 10-ethyl-4,4-dioctyl-7-oxo-8-oxa-3,5-dithia-4-stannatetradecanoate (DOTE)	15571-58-1

2-benzotriazol-2-yl-4,6-di-tert-butylphenol (UV-320)	3846-71-7
2-(2H-benzotriazol-2-yl)-4,6-ditertpentylphenol (UV-328)	25973-55-1
Sodium peroxometaborate	7632-04-4
Sodium perborate, perboric acid, sodium salt Sodium perborate Perboric acid, sodium salt Cadmium chloride	- 15120-21-5 11138-47-9 10108-64-2
1,2-Benzenedicarboxylic acid, dihexyl ester, branched and linear	68515-50-4
Trixylyl phosphate	25155-23-1
Lead di(acetate)	301-04-2
Imidazolidine-2-thione (2-imidazoline-2-thiol)	96-45-7
Disodium4-amino-3-[[4'-[(2,4-diaminophenyl)azo][1,1'-biphenyl]-4-yl]azo]-5-hydroxy-6-(phenylazo)naphthalene-2,7-disulphonate (C.I. Direct Black 38)	1937-37-7
Disodium 3,3'-[[1,1'-biphenyl]-4,4'-diylbis(azo)]bis(4-aminonaphthalene-1-sulphonate) (C.I. Direct Red 28)	573-58-0
Dihexyl phthalate	84-75-3
Cadmium sulphide	1306-23-6
Pentadecafluorooctanoic acid (PFOA)	335-67-1
Dipentyl phthalate (DPP)	131-18-0
Cadmium oxide	1306-19-0
Cadmium	7440-43-9
Ammonium pentadecafluorooctanoate (APFO)	3825-26-1

Chromium trioxide	1333-82-0

Acids concreted from abromium triovide and their elicements	
Acids generated from chromium trioxide and their oligomers Oligomers of chromic acid and dichromic acid	
Chromic acid	7738-94-5
Dichromic acid	13530-68-2
2-methoxyethanol	109-86-4
2-ethoxyethanol	110-80-5
Trichloroethylene	79-01-6
Tetraboron disodium heptaoxide, hydrate	12267-73-1
Sodium chromate	7775-11-3
Potassium dichromate	7778-50-9
Potassium chromate	7789-00-6
Disodium tetraborate, anhydrous	12179-04-3, 1303-96-4, 1330- 43-4
Boric acid Boric acid, crude natural Boric acid	- 11113-50-1 10043-35-3
Ammonium dichromate	7789-09-5
Acrylamide	79-06-1
Tris(2-chloroethyl) phosphate	115-96-8
Pitch, coal tar, high-temp.	65996-93-2
Lead sulfochromate yellow (C.I. Pigment Yellow 34)	1344-37-2
Lead chromate molybdate sulphate red (C.I. Pigment Red 104)	12656-85-8
Lead chromate	7758-97-6
Diisobutyl phthalate	84-69-5
Anthracene oil, anthracene-low	90640-82-7
Anthracene oil, anthracene paste, distn. lights	91995-17-4
Anthracene oil, anthracene paste, anthracene fraction	91995-15-2
Anthracene oil, anthracene paste	90640-81-6
Anthracene oil	90640-80-5
2,4-dinitrotoluene	121-14-2
Triethyl arsenate	15606-95-8
Sodium dichromate	10588-01-9, 7789-12-0
Lead hydrogen arsenate	7784-40-9
Hexabromocyclododecane (HBCDD)	1
Hexabromocyclododecane	25637-99-4
gamma-hexabromocyclododecane 1,2,5,6,9,10-hexabromocyclododecane	134237-52-8 3194-55-6
alpha-hexabromocyclododecane	134237-50-6
beta-hexabromocyclododecane	134237-50-0
Dibutyl phthalate (DBP)	84-74-2
Diarsenic trioxide	1327-53-3
Diarsenic pentaoxide	1303-28-2
	1000 20 2

Cobalt dichloride	7646-79-9
Bis(tributyltin) oxide (TBTO)	56-35-9
Bis (2-ethylhexyl)phthalate (DEHP)	117-81-7
Benzyl butyl phthalate (BBP)	85-68-7
Anthracene	120-12-7
Alkanes, C10-13, chloro (Short Chain Chlorinated Paraffins)	85535-84-8
5-tert-butyl-2,4,6-trinitro-m-xylene (Musk xylene)	81-15-2
4,4'- Diaminodiphenylmethane (MDA)	101-77-9

# Annex EE. List of substances subject to REACH Authorisation (current as of the date of this specification, current list maintained in the latest REACH regulation and its amendments) PROHIBITED AT OR ABOVE 0.1% WEIGHT BY WEIGHT OF THE ARTICLE

Substance Name	CAS Number
5-tert-butyl-2,4,6-trinitro-m-xylene (Musk xylene)	81-15-2
4,4' - Diaminodiphenylmethane (MDA)	101-77-9
Hexabromocyclododecane (HBCDD) and all major diastereoisomers identified	
gamma-hexabromocyclododecane EC No.: -   CAS No.: 134237-52-8	
beta-hexabromocyclododecane EC No.: -   CAS No.: 134237-51-7	
Hexabromocyclododecane EC No.: 247-148-4   CAS No.: 25637-99-4	
1,2,5,6,9,10-hexabromocyclodecane EC No.: 221-695-9   CAS No.: 3194-55-6	
alpha-hexabromocyclododecane EC No.: -   CAS No.: 134237-50-6	
Bis(2-ethylhexyl) phthalate (DEHP)	117-81-7
Benzyl butyl phthalate (BBP)	85-68-7
Dibutyl phthalate (DBP)	84-74-2
Diisobutyl phthalate (DIBP)	84-69-5
Diarsenic trioxide	1327-53-3
Diarsenic pentaoxide	1303-28-2
Lead chromate	7758-97-6
Lead sulfochromate yellow	1344-37-2
Lead chromate molybdate sulfate red	12656-85-8
Tris(2-chloroethyl) phosphate	115-96-8
2,4-dinitrotoluene (2,4-DNT)	121-14-2
Trichloroethylene	79-01-6
Chromium trioxide	1333-82-0

A 11	
Acids generated from chromium trioxide and their oligomers	
Oligomers of chromic acid and dichromic acid	
Chromic acid EC No.: 231-801-5   CAS No.: 7738-94-5	
Dichromic acid EC No.: 236-881-5   CAS No.: 13530-68-2	
Sodium dichromate	10588-01-9, 7789-12-0
Potassium dichromate	7778-50-9
Ammonium dichromate	7789-09-5
Potassium chromate	7789-00-6
Sodium chromate	7775-11-3
Formaldehyde, oligomeric reaction products with aniline	25214-70-4
Arsenic acid	7778-39-4
Bis(2-methoxyethyl) ether	111-96-6
1,2-dichloroethane (EDC)	107-06-2
2,2'-dichloro-4,4'-methylenedianiline (MOCA)	101-14-4
Dichromium tris(chromate)	24613-89-6
Strontium chromate	7789-06-2
Potassium hydroxyoctaoxodizincatedichromate	11103-86-9
Pentazinc chromate octahydroxide	49663-84-5
1-bromopropane (n-propyl bromide)	106-94-5
Diisopentyl phthalate	605-50-5
1,2-Benzenedicarboxylic acid, di-C6-8-branched alkyl esters, C7-rich	71888-89-6
1,2-Benzenedicarboxylic acid, di-C7-11-branched and linear alkyl esters	68515-42-4
1,2-Benzenedicarboxylic acid, dipentyl ester, branched and linear	84777-06-0
Bis(2-methoxyethyl) phthalate	117-82-8
Dipentyl phthalate	131-18-0
N-pentyl-isopentylphthalate	776297-69-9
Anthracene oil A complex combination of polycyclic aromatic hydrocarbons obtained from coal tar having an approximate distillation range of 300°C to 400°C (572°F to 752°F). Composed primarily of phenanthrene, anthracene and carbazole.	90640-80-5
Pitch, coal tar, high-temp.  The residue from the distillation of high temperature coal tar. A black solid with an approximate softening point from 30°C to 180°C (86°F to 356°F). Composed primarily of a complex mixture of three or more membered condensed ring aromatic hydrocarbons.  4-(1,1,3,3-tetramethylbutyl)phenol, ethoxylated	65996-93-2
covering well-defined substances and UVCB substances, polymers and homologues  4-Nonylphenol, branched and linear, ethoxylated substances with a linear and/or branched alkyl chain with a carbon number of 9 covalently bound in position 4 to phenol, ethoxylated covering UVCB- and well-defined substances, polymers and homologues, which include any of the individual isomers and/or combinations thereof	

### Annex FF. Hydrofluorocarbons (HFCs)

Trifluoromethane (HFC-23)	75-46-7
Difluoromethane (HFC-32)	75-10-5
Fluoromethane (HFC-41)	593-53-3
1,1,1,2,3,4,4,5,5,5-decafluoropentane (HFC-43-10)	138495-42-8
2H, 3H-Decafluoropentane (HFC-43-10mee)	138495-42-8
Pentafluoroethane (HFC-125)	354-33-6
1,1,2,2-tetrafluoroethane (HFC-134)	359-35-3
1,1,1,2-tetrafluoroethane (HFC-134a)	811-97-2
1,1,2-trifluoroethane (HFC-143)	430-66-0
1,1,1-trifluoroethane (HFC-143a)	420-46-2
1,2-Difluoroethane (HFC-152)	624-72-6
1,1-Difluoroethane (HFC-152a)	75-37-6
Monofluoroethane (Ethyl fluoride) (HFC-161)	353-36-6
1,1,1,2,3,3,3-heptafluoropropane (HFC-227ca)	431-89-0
1,1,1,2,2,3,3-heptafluoropropane (HFC-227ca)	2252-84-8
1,1,2,2,3,3-hexafluoropropane (HFC-236ca)	27070-61-7
1,1,1,2,2,3-hexafluoropropane (HFC-236cb)	677-56-5
1,1,1,2,3,3-hexafluoropropane (HFC-236ea)	431-63-0
1,1,1,3,3,3-hexafluoropropane (HFC-236fa)	690-39-1
1,1,2,2,3-pentafluoropropane (HFC-245ce)	679-86-7
1,1,1,3,3-pentafluoropropane (HFC-245fa)	460-73-1
1,1,1,3,3-pentafluorobutane (HFC-365mfc)	406-58-6
Heptafluorocyclopentane (HFC-c-447ef)	15290-77-4

### Annex GG. Nonylphenols

Nonylphenol	25154-52-3
p-nonyl-phenol	104-40-5
4-nonyl-phenol, branched=	84852-15-3
Nonylphenol, branched	90481-04-2
Isononylphenol	11066-49-2
p-Isononylphenol	26543-97-5
p-(Nonan-2-yl))phenol	17404-66-9
p-(2-Methyloctan-2-yl) phenol	30784-30-6
4-(3-Methyloctan-3-yl) phenol	52427-13-1
o-Nonylphenol	136-83-4
o-Isononylphenol	27938-31-4
Phenol, 2-nonyl-, branched	91672-41-2
m-Nonylphenol	139-84-4
Neononylphenol	1196678-78-0

4-(3,5-Dimethylheptan-3-yl) phenol	186825-36-5
4-(3,6-Dimethylheptan-3-yl)phenol	142731-63-3
2-(Nonan-2-yl) phenol	17404-45-4
Phenol, 2-tert-nonyl-	89585-68-2
Phenol, sec-nonyl-	97372-03-7
Phenol, 4-tert-nonyl-	58865-77-3
Phenol, o-sec-nonyl-	27214-48-8
Phenol, p-sec-nonyl-	27072-91-9

#### **Annex HH. Perchlorates**

Ammonium perchlorate	7790-98-9
Lithium perchlorate	7791-03-9
Potassium perchlorate	7778-74-7
Sodium perchlorate	7601-89-0
Barium perchlorate	13465-95-7
Lead perchlorate	13637-76-8
Magnesium perchlorate	10034-81-8
Nickel perchlorate	13637-71-3

## Annex II. Perfluorooctyl acid (PFOA) and salts (for a more comprehensive list of PFOA CAS numbers see OECD

 $\frac{http://search.oecd.org/officialdocuments/displaydocumentpdf/?cote=env/jm/mono\%282006\%2}{915\&doclanguage=en}$ 

Pentadecafluorooctanoic acid	335-67-1
2,2,3,3,4,4,5,5,6,6,7,7,8,8,8-penta¬deca¬fluoro-octanoic acid, sodium salt	335-95-5
2,2,3,3,4,4,5,5,6,6,7,7,8,8,8-penta¬deca¬fluoro-octanoic acid, potassium salt	2395-00-8
2,2,3,3,4,4,5,5,6,6,7,7,8,8,8-penta¬deca¬fluoro-octanoic acid, silver salt	335-93-3
Acid Fluoride of PFOA	335-66-0
Methyl ester of PFOA	376-27-2
Ethyl ester of PFOA	3108-24-5
2,2,3,3,4,4,5,5,6,6,7,7,8,8,8-penta-deca-fluoro-octanoic acid, ammonium salt	3825-26-1
Octanoic acid, 2,2,3,3,4,4,5,5,6,6,7,7,8,8,8-pentadecafluoro-, chromium(3+)	68141-02-6
Ethanaminium, N,N,N-triethyl-, salt with pentadecafluorooctanoic acid (1:1)	98241-25-9

#### Annex JJ. Perfluorinated compounds

Perfluoropolymethylisopropyl-ether (PFPMIE)	Not available
Trifluoromethyl sulphur pentafluoride	Not available
Nitrogen trifluoride	7783-54-2
Perfluorocyclopropane	Not available

#### Annex KK. Toluene Diisocyanate (this list is all inclusive)

Toluene diisocyanate trimer	9019-85-6
-----------------------------	-----------

Poly(toluene diisocyanate)	9017-01-0
Toluene diisocyanate dimer	26747-90-0
Toluene diisocyanate "cyclic" trimer	26603-40-7
2,6-Toluene diisocyanate Note - reportable except for use in coatings, adhesives,	91-08-7
elastomers, binders, and sealants at less than or equal to 0.1% in a Consumer	
Product (defined as a chemical substance that is directly, or as part of a mixture,	
sold or made available to consumers for their use in or around a permanent or	
temporary household or residence, in or around a school, or in recreation. [Source:	
US Code of Federal Regulations Title 40 Part 721.3 Subpart A])	
2,4-Toluene diisocyanate Note - reportable except for use in coatings, adhesives,	584-84-9
elastomers, binders, and sealants at less than or equal to 0.1% in a Consumer	
Product (defined as a chemical substance that is directly, or as part of a mixture,	
sold or made available to consumers for their use in or around a permanent or	
temporary household or residence, in or around a school, or in recreation. [Source:	
US Code of Federal Regulations Title 40 Part 721.3 Subpart A])	
Toluene diisocyanate unspecified isomer Note - reportable except for use in	26471-62-5
coatings, adhesives, elastomers, binders, and sealants at less than or equal to 0.1%	
in a Consumer Product (defined as a chemical substance that is directly, or as part	
of a mixture, sold or made available to consumers for their use in or around a	
permanent or temporary household or residence, in or around a school, or in	
recreation. [Source: US Code of Federal Regulations Title 40 Part 721.3 Subpart	
A])	

### Annex LL. Nonylphenol Ethoxylates

Ethanol, 2-[2-(4-nonylphenoxy)ethoxy]-	20427-84-3
Poly(oxy-1,2-ethanediyl), α-(4-nonylphenyl)- ω-hydroxy-	26027-38-3
3,6,9,12,15,18,21-Heptaoxatricosan-1-ol, 23- (nonylphenoxy)-	27177-05-5
3,6,9,12,15,18,21,24,27-Nonaoxanonacosan-1- ol, 29-(nonylphenoxy)-	27177-08-8
Ethanol, 2-(nonylphenoxy)-	27986-36-3
Ethanol, 2-[2-[2-(4- nonylphenoxy)ethoxy] ethoxy]-	7311-27-5
Poly(oxy-1,2-ethanediyl), α(nonylphenyl)- ω-hydroxy-	9016-45-9
Ethanol, 2-[2-(nonylphenoxy)ethoxy]-	27176-93-8
Poly(oxy-1,2-ethanediyl), α-(2- nonylphenyl)-ω-hydroxy-	51938-25-1
Poly(oxy-1,2-ethanediyl), α-(isononylphenyl)- ω-hydroxy-	37205-87-1
3,6,9,12,15,18,21,24-Octaoxahexacosan-1-ol, 26-(nonylphenoxy)-	26571-11-9

### Annex MM. Creosote, Coal Tar, Anthracene Etc.

Cresote; wash oil	8001-58-9
Creosote Oil; wash oil	61789-28-4
Distillates (coal tar); naphthalene oils; naphthalene oil	84650-04-4
Creosote oil; acenaphthene fraction; wash oil	90640-84-9
Distillates (coal tar); upper; heavy anthracene oil	65996-91-0
Anthracene oil	90640-80-5
Tar acids; coal; crude; crude phenols	65996-85-2
Cresote; wood	8021-39-4
Low temperature tar oil; alkaline; extract residues (coal); low temperature	122384-78-5
coal tar alkaline	
Coal tar	8007-45-2

### Annex NN. Dibutyltin Compounds (DBT)

Dibutyltin oxide	818-08-6
Dibutyltin chloride	683-18-1
Dibutyltin diacetate	1067-33-0
Dibutyltin dilaurate	77-58-7
Dibutyltin hydrogen borate	75113-37-0
Dibutyltin maleate	78-04-6
Other dibutyltin compounds	-

### Annex OO. Organohalogen Flame Retardants

1,2-bis(2,4,6,-tribromphenoxy)ethane – BTBPE	37853-59-1
2,2',4,4',5,5'-hexabromobiphenyl (Firemaster® BP-6) BB 153	59080-40-9
2,2-bis (bromomethyl) 1,3-propanedioil DBNPG	3296-90-0
2,3,4,5-tetrabromobenzoic acid TBBA	Not available
2-ethylhexyl 2,3,4,5-tetrabromobenzoate TBB	183658-27-7
Bis (2-ethylhexyl) 3,4,5,6-tetrabromophthalate TBPH	26040-51-7
Decabromodiphenyl ethane DBDPE	84852-53-9
Decabromodiphenyl ether decaBDE	1163-19-5
Di(2-ethylhexyl) phthalate DEHP	117-81-7
Hexabromocyclododecane HBCD	25637-99-4,
	3194-55-6,
	134237-50-6,
	134237-51-7,
	134237-52-8
Octabromodiphenyl ether octaBDE	32536-52-0
Pentabromodiphenyl ether pentaBDE	32534-81-9
Polybrominated diphenyl ether PBDE	See Annex Q
	for listing
Tetrabromobisphenol A TBBPA	79-94-7
Tetrabromobisphenol A-bis (2,3-dibromopropylether) TBBPA-BDBPE	Not available
Tetrabromoethylcyclohexane TBECH	Not available
Tributyl phosphate TBP	126-73-8
Tricrecyl phosphate TCP	Not available
Triphenyl phosphate TPhP	115-86-6
Tris (1-chloro-2-propyl) phosphate TCPP	13674-84-5
Tris (1,3-dichloro-2-propyl)phosphate ("chlorinated tris") TDCPP	13674-87-8
Tris (2-butoxyethyl) phosphate TBEP	Not available
Tris (2-chloroethyl) phosphate TCEP	115-96-8
Tris (2-ethylhexyl)phosphate TEHP	Not available
Tris (2,3-dibromopropyl) phosphate TDBPP	126-72-7

# Annex PP. IEC 62474 Declarables List (see latest list and information here: http://std.iec.ch/iec62474/iec62474.nsf/Index?open&q=225923

Diarsenic pentoxide	1303-28-2
Diarsenic trioxide	1327-53-3
Asbestos	See Reference Substance worksheet for more details
Azocolourants and Azodyes which form certain aromatic amines	See Reference Substance worksheet for more details
Beryllium Oxide	1304-56-9

Boric acid	10043-35-3; 11113-50-1
Brominated flame retardants (other than PBBs, PBDEs, or HBCDD)	See Reference Substance worksheet for more details
Brominated flame retardants (other than PBBs, PBDEs, or HBCDD)	See Reference Substance worksheet for more details
Cadmium/Cadmium compounds	See Reference Substance worksheet for more details
Cadmium/Cadmium compounds	See Reference Substance worksheet for more details
Chromium (VI) Compounds	See Reference Substance worksheet for more details
Cobalt dichloride	7646-79-9
Dibutyltin (DBT) compounds	See Reference Substance worksheet for more details
Dioctyltin (DOT) compounds	See Reference Substance worksheet for more details
Dimethylfumarate (DMF)	624-49-7
Disodium tetraborate, anhydrous	See Reference Substance worksheet for more details
Fluorinated Greenhouse Gases (PFC, SF6, HFC)	See Reference Substance worksheet for more details
Formaldehyde	50-00-0
Hexabromocyclododecane (HBCDD)	See Reference Substance worksheet for more details
Lead/Lead Compounds	See Reference Substance worksheet for more details
Lead/Lead Compounds	See Reference Substance worksheet for more details
Lead/Lead Compounds	See Reference Substance worksheet for more details
Lead/Lead Compounds	See Reference Substance worksheet for more details
Lead/Lead Compounds	See Reference Substance worksheet for more details
Lead chromate	7758-97-6
Lead chromate molybdate sulphate red (C.I. Pigment Red 104)	12656-85-8
Lead sulfochromate yellow (C.I. Pigment Yellow 34)	1344-37-2
Mercury/Mercury Compounds	See Reference Substance worksheet for more details
Mercury/Mercury Compounds	See Reference Substance worksheet for more details
Mercury/Mercury Compounds	See Reference Substance worksheet for more details
Nickel/Nickel Compounds	See Reference Substance worksheet for more details
Ozone Depleting Substances (CFC, Halon, HBFC, HCFC & others)	See Reference Substance worksheet for more details
Perchlorates	See Reference Substance worksheet for more details
2-benzotriazol-2-yl-4,6-di-tert-butylphenol (UV-320)	3846-71-7
Phthalates, Selected Group 1 (DEHP, DBP, BBP, DIBP)	See Reference Substance worksheet for more details
Phthalates, Selected Group 2 (DIDP, DINP, DNOP)	See Reference Substance worksheet for more details
Bis (2-ethylhexyl)phthalate (DEHP)	117-81-7
Dibutyl phthalate (DBP)	84-74-2
Benzyl butyl phthalate (BBP)	85-68-7
Diisobutyl phthalate	84-69-5
1,2-Benzenedicarboxylic acid, di-C6-8-branched alkyl esters, C7-rich	71888-89-6

1,2-Benzenedicarboxylic acid, di-C7-11-branched and linear alkyl esters	68515-42-4
Polybrominated biphenyls (PBB)	See Reference Substance worksheet for more details
Polybrominated diphenyl ethers (PBDE)	See Reference Substance worksheet for more details
Polychlorinated Biphenyls (PCBs) and specific substitutes	See Reference Substance worksheet for more details
Polychlorinated Terphenyls (PCTs)	See Reference Substance worksheet for more details
Polychlorinated naphthalenes	See Reference Substance worksheet for more details
Radioactive substances	See Reference Substance worksheet for more details
Aluminosilicate Refractory Ceramic Fibres	
Zirconia Aluminosilicate Refractory Ceramic Fibres	
Alkanes, C10-13, chloro (Short Chain Chlorinated Paraffins)	See Reference Substance worksheet for more details
Strontium chromate	7789-06-2
Bis(tributyltin) oxide (TBTO)	56-35-9
Tri-substituted organostannic compounds	See Reference Substance worksheet for more details
Tris(2-chloroethyl) phosphate	115-96-8
4-(1,1,3,3-tetramethylbutyl)phenol	140-66-9
Bis(2-methoxyethyl) ether	111-96-6
Bis(2-methoxyethyl) phthalate	117-82-8
Pentazinc chromate octahydroxide	49663-84-5
Potassium hydroxyoctaoxodizincatedichromate	11103-86-9
Chlorinated Flame Retardants (CFR)	See Reference Substance worksheet for more details
Chlorinated Flame Retardants (CFR)	See Reference Substance worksheet for more details
Bis(pentabromophenyl) ether (decabromodiphenyl ether) (DecaBDE)	1163-19-5
Sulfurous acid, lead salt, dibasic	62229-08-7
1,2-bis(2-methoxyethoxy)ethane (TEGDME; triglyme)	112-49-2
Trilead dioxide phosphonate	12141-20-7
1,2-dimethoxyethane; ethylene glycol dimethyl ether (EGDME)	110-71-4
4-aminoazobenzene	60-09-3
Tetralead trioxide sulphate	12202-17-4
Orange lead (lead tetroxide)	1314-41-6
Pyrochlore, antimony lead yellow	8012-00-8
Pentalead tetraoxide sulphate	12065-90-6
1,2-diethoxyethane	629-14-1
Diboron trioxide	1303-86-2
Dibutyltin dichloride (DBTC)	683-18-1
Lead cyanamidate	20837-86-9
N,N-dimethylformamide	68-12-2
Silicic acid (H2Si2O5), barium salt (1:1), lead-doped	68784-75-8
1,2-Benzenedicarboxylic acid, dipentyl ester, branched and linear	84777-06-0

Diisopentyl phthalate	605-50-5
N-pentyl-isopentylphthalate	776297-69-9
Lead titanium trioxide	12060-00-3
Lead titanium zirconium oxide	12626-81-2
Lead oxide sulfate	12036-76-9
[Phthalato(2-)]dioxotrilead	69011-06-9
Dioxobis(stearato)trilead	12578-12-0
Fatty acids, C16-18, lead salts	91031-62-8
Lead dinitrate	10099-74-8
Di-isodecyl phthalate (DIDP)	68515-49-1; 26761-40-0
Di-n-hexyl phthalate (DnHP)	84-75-3
Hexahydromethylphthalic anhydride	See Reference Substance worksheet for more details
Cadmium	7440-43-9
Cadmium oxide	1306-19-0
Dipentyl phthalate (DPP)	131-18-0
Pentadecafluorooctanoic acid (PFOA)	335-67-1
Ammonium pentadecafluorooctanoate (APFO)	3825-26-1
4-Nonylphenol, branched and linear, ethoxylated	See Reference Substance worksheet for more details
Cadmium sulphide	1306-23-6
Trixylyl phosphate	25155-23-1
Disodium 3,3'-[[1,1'-biphenyl]-4,4'-diylbis(azo)]bis(4-aminonaphthalene-1-sulphonate) (C.I. Direct Red 28)	573-58-0
Perfluorooctanoic acid (PFOA) and individual salts and esters of PFOA	See Reference Substance worksheet for more details
Perfluorooctanoic acid (PFOA) and individual salts and esters of PFOA	See Reference Substance worksheet for more details
Imidazolidine-2-thione (2-imidazoline-2-thiol)	96-45-7
1,2-Benzenedicarboxylic acid, dihexyl ester, branched and linear	68515-50-4
Diisononyl phthalate (DINP)	28553-12-0; 68515-48-0
Benzo[a]pyrene (BaP)	50-32-8
Benzo[e]pyrene (BeP)	192-97-2
Benzo[a]anthracene (BaA)	56-55-3
Chrysen (CHR)	218-01-9
Benzo[b]fluoranthene (BbFA)	205-99-2
Benzo[j]fluoranthene (BjFA)	205-82-3
Benzo[k]fluoranthene (BkFA)	207-08-9
Dibenzo[a,h]anthracene (DBAhA)	53-70-3
Benzo[a]pyrene (BaP)	50-32-8
Benzo[e]pyrene (BeP)	192-97-2
Benzo[a]anthracene (BaA)	56-55-3

Chrysen (CHR)	218-01-9
Benzo[b]fluoranthene (BbFA)	205-99-2
Benzo[j]fluoranthene (BjFA)	205-82-3
Benzo[k]fluoranthene (BkFA)	207-08-9
Dibenzo[a,h]anthracene (DBAhA)	53-70-3
Perfluorooctane sulfonates (PFOS)	See Reference Substance worksheet for more details
Perfluorooctane sulfonates (PFOS)	See Reference Substance worksheet for more details
Disodium 4-amino-3-[[4'-[(2,4-diaminophenyl)azo][1,1'-biphenyl]-4-yl]azo]-5-hydroxy-6-(phenylazo)naphthalene-2,7-disulphonate (C.I. Direct Black 38)	1937-37-7
2-ethylhexyl 10-ethyl-4,4-dioctyl-7-oxo-8-oxa-3,5-dithia-4-stannatetradecanoate (DOTE)	15571-58-1
Reaction mass of 2-ethylhexyl 10-ethyl-4,4-dioctyl-7-oxo-8-oxa-3,5-dithia-4-stannatetradecanoate and 2-ethylhexyl 10-ethyl-4-[[2-[(2-ethylhexyl)oxy]-2-oxoethyl]thio]-4-octyl-7-oxo-8-oxa-3,5-dithia-4-stannatetradecanoate (reaction mass of DOTE and MOTE)	
2-(2H-benzotriazol-2-yl)-4,6-ditertpentylphenol (UV-328)	25973-55-1
1,2-benzenedicarboxylic acid, di-C6-10-alkyl esters or mixed decyl and hexyl and octyl diesters	68515-51-5; 68648-93-1
1,3-propanesultone	1120-71-4
2,4-di-tert-butyl-6-(5-chlorobenzotriazol-2-yl)phenol (UV-327)	3864-99-1
2-(2H-benzotriazol-2-yl)-4-(tert-butyl)-6-(sec-butyl)phenol (UV-350)	36437-37-3
Perfluorononan-1-oic-acid and its sodium and ammonium salts	See Reference Substance worksheet for more details
Benzo[def]chrysene (Benzo[a]pyrene)	50-32-8
4,4'-isopropylidenediphenol	80-05-7
Nonadecafluorodecanoic acid (PFDA) and its sodium and ammonium salts	See Reference Substance worksheet for more details
Perfluorohexane-1-sulphonic acid and its salts	See Reference Substance worksheet for more details
Chrysene	218-01-9
Benz[a]anthracene	56-55-3
Cadmium hydroxide	21041-95-2
1,6,7,8,9,14,15,16,17,17,18,18- Dodecachloropentacyclo[12.2.1.16,9.02,13.05,10]octadeca-7,15- diene ("Dechlorane Plus" <sup>TM</sup> )	See Reference Substance worksheet for more details
Benzo[ghi]perylene	191-24-2
Octamethylcyclotetrasiloxane	556-67-2
Decamethylcyclopentasiloxane	541-02-6
Dodecamethylcyclohexasiloxane	540-97-6
Disodium octaborate	12008-41-2
Terphenyl, hydrogenated	61788-32-7
Lead	7439-92-1
	1

Dicyclohexyl phthalate	84-61-7
2,2-bis(4'-hydroxyphenyl)-4-methylpentane	6807-17-6
Benzo[k]fluoranthene	207-08-9
Fluoranthene	206-44-0
Phenanthrene	85-01-8
Pyrene	129-00-0
Perfluorooctanoic acid and its salts	See Reference Substance worksheet for more details
PFOA-related substances	See Reference Substance worksheet for more details
Tris(4-nonylphenyl, branched and linear) phosphite (TNPP) with ≥ 0.1% w/w of 4-nonylphenol, branched and linear (4-NP)	See Reference Substance worksheet for more details
Tetraboron disodium heptaoxide, hydrate	12267-73-1
Diisohexyl phthalate	71850-09-4
Perfluorobutane sulfonic acid (PFBS) and its salts	See Reference Substance worksheet for more details
